Not so well known is the apparent scope of geographical shifts in school population due to an unprecedented high rate of migration of the civilian population. The September, 1945, estimate of the U.S. Bureau of the Census places the average annual intercounty migration for the period 1941-45 at 4,700,000. This is roughly two-thirds more than the equivalent figure of 2,800,000 for the prewar period 1935 to 1940. The impact of this wartime population movement on the school population is indicated by the fact that almost 3,500,000 of the 15,300,000 migrants were under 14 years of age. Relatively large numbers of migrants were adult workers shifting to war production areas. Of the population 14 and over, 12.7 percent were migrants during the war period. Nevertheless 10.8 percent of persons under 14 years of age were also migrants.

Summer school sessions in the elementary school level in 142 school systems showed an enrollment total of 48,087 in 1944, a gain of 10.1 percent over the 1943 figure; and on the high school level in 220 systems the enrollment totalled 111,731 as compared with 95,459 in 1943, representing a gain of 17 percent.

In the five years from 1939-40 to 1944-45 there was a decrease of approximately 68,000, about 7.4 percent, in the total number of positions for teachers, supervisors, principals and other instructional staff.

Approximately 168,000 or 20.4 percent of the teaching positions in the fall of 1944 were held by "new" teachers, persons who had not taught in that position the previous year. Approximately

5,000 positions were reported vacant for 1944-45.

From the end of the school year in June 1944 to Oct. 18, 1944, approximately 138,000 teachers left the positions they held in 1943-44 and all but about 50,000, who went to other teaching jobs, left

#### DECREASE IN NUMBER OF INSTRUCTIONAL STAFF

School Year	Number	Percent Decrease	
		From Previous Year	From 1939-40
1939-40	911,800		
1940-41	907,700	0.45	0.45
1941-42	898,000	1.07	1.61
1942-43	877,000	2.34	3.82
1943-44	865,000	1.37	5.13
1944-45	860,000	0.58	5.68

the profession. In addition to about 2,500 who entered the armed forces during this period, over 14,000 women teachers left teaching, for which they had prepared, to take a job in government or industry. Almost as many male teachers left to go into business and industry as into the armed forces during this period.

**SCIENTIFIC RESEARCH AND DEVELOPMENT, OFFICE OF (OSRD).** A United States agency, established by executive order, June 28, 1941, to assure adequate provision for research on scientific and medical problems relating to the national defense. Dr. Vannevar Bush, President of the Carnegie Institution of Washington, is Director. The headquarters are located at 1530 P Street, N. W., Washington, D. C. For details of organization, see 1943 YEAR BOOK.

Following the close of the war, military restrictions were lifted on a considerable portion of OSRD work, which is being publicized to an increasing extent in the press and in technical journals. The official short history of the OSRD, "Scientists Against Time," by James Phinney Baxter, 3rd, was published November 1, 1946. The long history of OSRD, in a number of volumes, is scheduled for publication in 1947 as is, also, a series of monographs covering highly technical aspects of the work.

VANNEVAR BUSH.

**SECRET SERVICE, U.S.** A division of the U.S. Department of the Treasury, charged with the protection of the President, the suppression of counterfeiting, safeguarding of the money and securities handled by the Government, and the investigation of crimes relating to the Department of the Treasury. (See YEAR BOOK for 1941 for details.) Chief: Frank J. Wilson.

**SECURITIES AND EXCHANGE COMMISSION (SEC).** An independent agency of the U.S. Government which has the following functions: Supervision of registration of security issues and suppression of fraudulent practices in the sale of securities under the Securities Act of 1933; supervision and regulation of transactions and trading in outstanding securities, both on the stock exchanges and in the over-the-counter markets, as provided in the Securities Exchange Act of 1934; regulation of public utility holding companies under the Public Utility Holding Company Act of 1935; supervision of indentures used in the public offering of new security issues as provided under the Trust Indenture Act of 1939; registration and regulation of investment companies and investment advisers under the Investment Company Act and the Investment Advisers Act of 1940; and the preparation of advisory reports on plans, and participation as a party, in corporate reorganizations under Chapter X of the National Bankruptcy Act. Chairman: Ganson Pur-

cell. See FINANCIAL REVIEW under *Regulatory Policy* and *The Nation's Savings*.

**SELECTIVE SERVICE SYSTEM.** Enactment on Sept. 16, 1940, of the Selective Training and Service Act authorized the President to establish a Selective Service System, including: a Director of Selective Service; Local Boards; Appeal Boards and agencies of Appeal; "and to utilize the services of any and all departments of the United States Government; to delegate and to provide for the delegation of any authority vested in him under the Act."

At the beginning of 1946 the problem of the War Department was to keep a peace time Army together to fulfil promises and commitments abroad, at the same time answering an ever growing public demand for the discharge of men who had served during the war.

The Selective Training and Service Act, as amended, was to expire on May 15, 1946. President Truman requested extension of the Selective Training and Service Act in January, declaring that it is "the only way we can get the men and bring back our veterans." Secretary of War Patterson, and General Dwight D. Eisenhower, Chief of Staff, United States Army, likewise recommended extension. They declared that the War Department, without the support of Selective Service, could not maintain its discharge policy.

Testifying before a sub-committee of the Senate Military Affairs Committee, General Eisenhower emphasized that only if Selective Service "is able to provide the 50,000 men per month we are asking for will the 1,500,000-man Army (deemed essential by the War Department) be guaranteed under our present discharge policy."

"Stop gap" legislation was passed May 14, after considerable debate, extending the Act until July 1, 1946, and on June 29, another measure was enacted providing for extension of the Act until March 31, 1947. The age bracket for liability for military service was set at 19 through 44 years of age and the Act was also amended to provide for the induction of World War II veterans who had not served overseas for at least 6 months, to exempt all fathers, and to limit military service through Selective Service inductions to eighteen months. President Truman fixed the induction age bracket for Selective Service registrants at 19 through 29 years, as the Army did not want men 30 years old or older.

The War Department called upon the Selective Service System for no men during the months of July and August. This was the first "draft holiday." Under the Act Selective Service was empowered to call up for induction only the number of men requested by the War and Navy Departments. The armed forces also determined the age groups of men wanted in every call and set the physical standards for acceptance.

Army enlistments for June totaled 62,494, of which 30,633 were men subject to induction through Selective Service. The total for July, 1946, was 44,063, of which 26,812 were listed by the War Department as "without previous military service," indicating that they were Selective Service registrants liable for call. The total for August, 1946, dropped to 39,615, including 27,580 "without prior military service."

In September the War Department called upon Selective Service for 25,000 men. Army volunteers during that month numbered 61,750. The War Department announced on October 15 that there would be a resumption of the "draft holiday" at least until January 1, 1947. October voluntary en-

listments were 48,769. In November the number dwindled to 19,427. December saw a further decrease, to 17,221. The War Department announced, however, that the "draft holiday" would be extended through January.

The following table gives the manpower picture as it existed December 31, 1946:

Total Registrants.....	85,180,000
Class I-C, all ages, (Registrants who were on Dec. 31 or who had been members of the armed forces).....	14,064,000
18-year-old Registrants (Exclusive of Class I-C).....	700,000
Registrants 19-through-29 years old (Exclusive of Class I-C).....	3,403,000
Registrants 30-through-49 years old (Exclusive of Class I-C).....	17,013,000

At the end of December 1945 there were approximately 7,000 conscientious objectors assigned to the 150 Civilian Public Service Camps and Projects. The peak number was approximately 8,500. Rate of discharge was slightly below that of the armed forces. As of December 31, 1946 there were only two camps left, containing approximately three hundred conscientious objectors.

There were 55 State Organizations (including New York State Procurement Office), 6,443 Local Boards, and 72 Appeal Boards comprising the Selective Service System at the end of 1946. There were 181,509 persons connected with the System. Of this number 172,040 who were uncompensated were divided as follows: 23,348 Local Board members, 7,703 Government Appeal Agents, 73,117 members of Advisory Boards for Registrants, 26,966 Examining Physicians, 6,827 Examining Dentists, 1,972 members of Boards of Appeal, 8,395 members of Medical Advisory Boards, 19,845 Re-employment Committeemen, 3,347 Advisers and Field Agents of the Medical Survey Program, 2 State Directors, and 518 Special Advisers and consultants.

Maj. Gen. Lewis B. Hershey was Director. Brig. Gen. Carlton S. Dargusch was Deputy Director.

LEWIS B. HERSHEY

**SENATE, U.S.** The following is an alphabetical list of the members of the U.S. Senate, 80th Congress, convening in 1947. Names of Democratic Senators are shown in italic and Republicans in roman type. The date of expiration of service is in all cases January 2, of the year named.

The office of President of the Senate, left vacant by Harry S. Truman, has been filled pro tempore by Kenneth McKellar. Secretary of the Senate is Leslie L. Biffle.

For a list of the Senate of the 79th Congress, see YEAR BOOK for 1946. For the activities of the 79th Congress during 1946, see United States under Congress.

**SEYCHELLES.** A British island colony in the Indian Ocean, northeast of Madagascar. It comprises a group of 92 islands with a total estimated area of 156 square miles. Mahé (55 square miles) and Praslin (15 square miles) are the largest of the islands. Population (1943 estimate), 33,621. Capital, Victoria, on the island of Mahé. The colony is administered by a governor, assisted by executive and legislative councils. Education is not compulsory, but there are a number of church schools, some of which have grants-in-aid. The chief products are coconuts and livestock. Copra and cinnamon oil are the chief exports. Rice, sugar, and cotton goods are the chief imports.

**SHIPBUILDING.** Shipbuilding in the United States at the end of 1946 was feeling heavily the pinch of the Administration's policy of retrenchment. The source of the greater part of shipbuilding in this country is the Government, whether for vessels for the United States Navy, for merchant vessels for the United States Maritime Commission, or for private contracts to which the Maritime Commission is a party. The history of the industry the world over always has been marked by periods of great activity and periods of severe depression, and it is quite natural that the intensive shipbuilding program in the United States during World War II should be followed by a period of low activity.

So far as merchant vessels are concerned, there are numerous passenger vessels and vessels of the combination passenger and cargo type that are needed to round out the various shipping services of this country. Plans for the building of these vessels are well advanced, but the construction has been kept waiting, because even the limited appropriations made by Congress have been withheld by the Administration. The Navy Department also has in contemplation certain experimental types of naval vessels, the development and completion of which during 1946 was likewise suspended through the withholding of appropriated funds.

Shipbuilding in the United States is on the decline for the reasons previously stated. Shipbuilding in European nations, on the other hand, is extremely active. At the end of September, 1946, the volume of merchant tonnage under construction in Great Britain was approximately 1,874,878 gross tons of vessels 100 tons gross and upwards, whereas in the United States at that time it was only about 354,000 gross tons, of which more than 50 percent of construction work was scheduled for completion by the end of the year.

Swedish shipyards are booked to capacity for a period of three or four years. The Dutch and the French are getting back into operation as fast as war-damaged shipyards can be rebuilt.

The number and total tonnage of steel self-propelled merchant vessels of 2,000 gross tons and over constructed in American shipyards from 1939 to date is as follows:

Year	(Vessels of 2,000 tons and over) Number of Vessels	Gross Tons
1939	28	241,052
1940	53	444,727
1941	95	749,105
1942	724	5,392,953
1943	1,001	12,499,873
1944	1,453	11,404,404
1945	1,007	7,663,362
1946	84	692,191

These figures speak for themselves, showing a climax reached in 1943, with a somewhat less but still great production in 1944, the decrease being due largely to a change in types of vessels from purely war expedient vessels of slow speed to faster turbine driven vessels also suitable for postwar service.

The number and displacement tonnage of Steel Combatant Naval Vessels [Battleships, Aircraft Carriers, Cruisers, Destroyers, Destroyer Escorts, High Speed Transports (Destroyer Escort Type), Frigates, Minelayers (Destroyer Type), Gunboats, Submarines], built and delivered in the years 1939-1946, are tabulated at the top of page 569.

The number and displacement tonnage of Steel Auxiliary Naval Vessels [Seaplane Tenders, Destroyer Tenders, Motor Torpedo Boat Tenders, Repair Ships, Aircraft Carrier Escorts, Submarine

Year	Built in Private Yards		Built in Navy Yards		Total	
	No.	Displace- ment Tons	No.	Displace- ment Tons	No.	Displace- ment Tons
1939	16	32,600	11	33,010	27	65,610
1940	12	31,705	15	22,690	27	54,395
1941	15	45,915	16	91,915	31	137,830
1942	94	342,760	35	89,835	129	432,595
1943	387	883,470	158	301,840	545	1,185,310
1944	387	809,305	82	284,555	469	1,093,860
1945	144	456,615	34	194,830	178	651,445
1946	59	275,859	6	60,304	65	336,163

Tenders, Submarine Rescue Vessels, Mine Layers, Ammunition Ships, Oilers, Fuel Oil Ships, Store Ships, Transports, Landing Ship Vehicle (formerly Large Net Layers, Auxiliary Miscellaneous Ships (Ice Breakers)], built and delivered in the years 1939 to date, are as follows:

Year	Built in Private Yards		Built in Navy Yards		Total	
	No.	Displace- ment Tons	No.	Displace- ment Tons	No.	Displace- ment Tons
1940	4	36,500			4	36,500
1941	1	9,180	3	12,640	4	21,820
1942	10	93,765	6	21,690	16	115,455
1943	62	391,765	1	9,000	63	400,765
1944	69	393,127	2	17,300	71	410,427
1945	24	174,122	1	8,680	25	182,802
1946	18	111,443	1	8,000	19	119,443

One of the extremely important factors was the development of a labor force in size and in skill to cope adequately with the ever-increasing demand for the Liberty vessels, as well as other types. Employment in privately-operated shipyards reached a peak of 1,397,700 in November, 1943, while the Government naval shipyards employed a maximum of 333,100 in July, 1943. The latter were engaged primarily in the repair and maintenance of combatant naval vessels.

While the building yards were busy with the problem of new vessels, the ship-repair yards of the country were called upon for ever-increasing efforts to keep existing vessels in operation. Their task covered conversion of merchant vessels from peacetime to wartime needs, together with an extensive participation in the repair and conversion of naval vessels, mostly of non-combatant types, as well as the repair of battle damage for both naval and merchant vessels.

The scope of the work handled in these repair yards is indicated by the number of vessels repaired or converted for various years as follows:

1942	..	5,158	1944	..	22,014
1943	..	17,172	1945	..	23,558

As a result of the wartime building program, the gross tonnage of American shipping as of June 30, 1946 was about 35,363,598 gross tons, approximately 50% of world tonnage.

It must be understood, however, that a large percentage of these American vessels are of emergency type—designed for rapid mass production—and hence are not suitable for use as modern, efficient and effective units of a peacetime merchant fleet. American merchant shipping lost approximately 4,000,000 gross tons as casualties of war and 865,000 gross tons as marine losses from period September 1, 1939, to July 31, 1946, among which were some of the finest vessels in the United States merchant fleet. It is the loss of the finer ships, together with the need for new types to round out existing services, that give some promise of a future for the industry in this country. Foreign

nations, on the other hand, suffered so severely in losses during the war that their fleets at the end of the war were in most cases seriously depleted, a fact which is largely responsible for the active shipbuilding program existing in Europe today.

H. GERRISH SMITH.

**SHIPPING.** Merchant shipping, which includes all vessels other than naval or pleasure craft, passed through a number of important evolutions in its returning cycle to a peacetime status in 1946.

Although American vessels have returned all our troops, a large number of foreign ships are still in this service carrying troops of their own countries. American troops were returned first because the United States was able to build and operate four times as many vessels as the rest of the world combined during the war. The first peacetime year in the decade saw 1,700 of these vessels relegated to a National Defense Reserve Fleet for future emergency.

World tonnage, which is actually considerably greater than before the war, was still not great enough to satisfy all rehabilitation and trade demands during 1946. Foreign operators, buying comparatively few of America's war-built ships, placed large orders in shipyards abroad. American operators, faced with trebled costs and with labor difficulties enhanced because of the fierce character of their foreign competition, bought even fewer war-built vessels, and placed few orders for new tonnage. Their fleets, however, on the average, were two to four times larger than before the war.

A marked trend during the year was the emergence of a number of new merchant fleets. Switzerland, Colombia, Costa Rica, Ecuador, Greenland, Iceland, and Eire, for the first time now have merchant ships on the high seas during peacetime.

The war brought about a great re-shuffle in the standings of the maritime nations of the world. The top fifteen nations before and after the conflict are as follows:

TABLE I

Rank	1939	1946
1	Great Britain	United States
2	United States	Great Britain
3	Japan	Norway
4	Norway	Russia
5	Gorinany	Sweden
6	Italy	Netherlands
7	Netherlands	France
8	France	Japan
9	Grocco	Panama
10	Sweden	Spain
11	Russia	Germany
12	Denmark	Greece
13	Panama	Denmark
14	Spain	Italy
15	Finland	Brazil

Germany and Japan will not be permitted to re-enter the foreign-trade merchant-shipping picture for many years to come. Their tonnage will be restricted to small coastwise craft. Great Britain and the Scandinavian nations have been taking active steps to fill the gap in the European trades, while, in the Pacific area, the United States and the Netherlands are leading contenders for the trade routes formerly served by Japanese vessels.

Italian shipping, while it will lack the large luxury liners notable before the war, is being partially restored in so far as cargo tonnage is concerned. Italian lines are also buying up a number of old passenger vessels for immigrant services to South America. Italian shipyards have been underbidding the world on new cargo tonnage.

The United States enters 1947 with a better

merchant fleet than at any time since the advent of steam. The American shipping industry does not contemplate the use of more than a quarter of its war-built fleet. This quarter, however, will be composed of "quality" ships, vessels that are 25 percent faster than pre-war. With this fleet, American operators have as their goal the transportation of an average of 50 percent of America's world trade.

Another distinct trend notable during 1946 was the partial obliteration of the dividing line between cargo and passenger ships, particularly in new American merchant vessels. So extensive has been this development that limited passenger accommodations may some day be available on a majority of the world's dry-cargo vessels. Tankers, bulk carriers, whalers, and other such specialized ships, however, will probably never bow to the tourist's urge for the unusual form of transportation.

A breakdown of the world's existing fleet of merchant ships is divided into five principal classifications. They are: combination passenger and cargo vessels, freighters, refrigerated vessels, bulk carriers and tankers. Table II shows how the world's tonnage is presently lined up under these categories.

TABLE II

	Combination Pass & Cargo	Freight- ers	Refrig- erated Vessels	Bulk Car- riers	Tankers
No of Ships .	988	8,694	224	558	1,981
Gross Tons	6,780,469	46,152,940	1,361,196	1,639,508	15,066,295

Of the world's 12,445 merchant ships of 1,000 gross tons and over, 2,224 are of Diesel propulsion, 4,051 are coal burning and 6,170 are oil burners. Nearly half, or 6,099 of these vessels, were built after 1941. Once again fifty percent of the world's merchant shipping will become overage at about the same time.

Table III shows the world's merchant fleets—pre-war and post-war, as of June 30, 1946. This table includes the number and gross tonnage of seagoing iron and steel steam and motor merchant-type vessels of 1,000 gross tons and over. The table excludes vessels on the Great Lakes and Inland Waterways and special types such as channel ves-

Note Included in the above figures but excluded from the United States are U.S. Government owned merchant vessels operating under foreign flags

sels, icebreakers, cable ships, etc., and vessels owned by the United States Army and Navy. Some 526 American vessels, with a gross tonnage of 3,223,571, are included under the various foreign flags to which they were lend-leased during the war. They will all have to be returned, or paid for, depending on the results of future negotiations.

FRANK J. TAYLOR.

**SHIPPING AND SHIPBUILDING, U.S. Navy.** The Naval Shipbuilding Program in 1946 consisted almost entirely of the completion of ships which had been ordered during the war and in which investments in labor and materials had been made to such an extent that good business dictated their completion. When it became clear that Japanese sea-power had been substantially destroyed in the closing months of the war in the Pacific, the Navy Department reviewed its shipbuilding program and determined, even ahead of the final surrender of Japan, that it was practicable to cancel a considerable part of the wartime Naval Shipbuilding Program. This program had been started during the dark days of the early part of the war and had had to be maintained at a high level to assure that the heavy losses which appeared inevitable in the closing phases of so desperate a struggle could be made good.

Early in 1946, a further review of the Naval Shipbuilding Program was made and further curtailments were ordered. This time, however, ships were divided into three categories:

(a) Those ships which should be completed as originally designed. In this category were placed certain ships of advanced design which were required in the Navy's development program and which looked ahead to the technical requirements anticipated in the years following the war, and those ships which had advanced so far in construction that cancellation would effect substantially no financial saving.

(b) Those ships upon which construction should be terminated but which should be retained in the "as is" condition because of the expenditures which have been made upon them and because they could be preserved even in their incomplete condition as a reserve against future need. This category included ships which had already been launched or which could readily be brought to launching condition and did not, therefore, involve tying up shipbuilding ways with partially completed vessels.

(c) Those ships which should be cut up and disposed of as scrap. While in no case were ships retained under construction simply for the purpose of providing work, efforts were made to distribute the contracts upon which work was to continue among the various yards, so as to

minimize the effects of so drastic a reduction in the total shipbuilding employment.

During the five previous years of national emergency and war, the Navy had organized and carried on a shipbuilding program unparalleled in world history. In the ten months preceding the fall of France in June 1940, some twenty-odd Naval and private shipyards employing several thousand workers had delivered but 31 vessels. Four years later there were 312 private and Naval shipyards engaged in constructing Naval vessels. Employing over 1,000,000 workers, they were building 161 different types of vessels and completing them at a peak rate of between 4,000 and 4,500 ships a month.

Each of these different types of vessels involved a special design to fit it for its particular mission in complex modern warfare—specialists were required for the development of the designs of the various classes: battleships and cruisers, aircraft carriers, destroyers and destroyer escorts, submarines, patrol craft including PTs (motor torpedo boats), and PSs and SCs (submarine chasers), minelayers and minesweepers, landing ships and landing craft, and the endless list of tenders, transports, ammunition ships, oil tankers, hospital ships, and so on which form the Auxiliary fleets. Further, many of these types required major changes as time went on to adapt them to the developments of the war.

Over a five-year period 87,863 ships, totaling 8,171,758 tons, were built for the Navy. In this same period the Navy acquired from other sources 2,756 vessels of 5,846,052 tons. The five-year program thus added 90,619 vessels to the Navy, with a tonnage increase of 14,017,810. Included in these figures were 1,188 combatant vessels displacing 3,512,462 tons; nearly 4,500 mine craft, patrol craft, and Naval auxiliaries exceeding 6,000,000 tons; and more than 82,000 landing craft totaling nearly 3,000,000 tons.

The foregoing statistics represent merely the result of this tremendous shipbuilding program. The man-hours, the physical exertion, the oftentimes physical and nervous exhaustion, cannot be measured statistically. For each worker in the shipyards there were two workers in the various satellite industries which provided electronics gear, steam and diesel propulsion machinery, fire-fighting equipment, anti-fouling paints, fuels, plastics, degaussing cables, shock-proof equipment of all sorts, life saving gear, and so forth.

The precision with which this tremendous productive effort had to be scheduled is perhaps best illustrated by the 45,000-ton battleship *Wisconsin*, which was commissioned at the Philadelphia Navy Yard on April 16, 1944. More than 30,000 plans and nearly 3,000,000 man-days of labor were required for the construction of this ship. Before her crew arrived to begin outfitting her for sea, welders had fused 4,000,000 feet of steel, riveters had driven 1,000,000 rivets, fitters had laid 422,000 feet of piping, electricians had installed 1,220,000 feet of wiring, and painters had applied 500 tons of paint.

Within the *Wisconsin's* massive hull and superstructure were installed 900 electric motors, 2,000 telephones, 210 pumps, and 426 tons of ventilating ducts. To provide accommodations for her 173 officers and 2,738 enlisted men, 64 cabins and state-rooms and 75 different compartments for berthing the crew had to be built into the ship. In addition, there were 29 washrooms, 18 messing spaces and space for tons of stores of all sorts. Galley equipment adequate for a big hotel was provided to assure adequate, well-cooked and appetizing food for

the whole ship's company. Fire protection was provided by main pumps capable of forcing 4,800 gallons of water a minute through her fire mains. Sprinkler systems were installed in many of her 1,000 watertight compartments.

Only by multiplying the problems encountered in the construction of the *Wisconsin* many thousand times, and adding such factors as time, weather, and geography, can the scope of the Navy's wartime shipbuilding program be visualized. To the toil of labor and the direction of management were added the services of virtually every profession. Bottlenecks in the transportation or allocation of materials had to be broken. The assured availability of the smallest item for the largest ship required, in addition to the designer, the energies of countless lawyers, accountants, and management engineers, as well as the mechanic working at his machine. The landing craft program alone required over 4,000 contractors and some 30,000 subcontractors.

To the total of 16,000,000 horsepower of both steam and diesel engines in the entire Fleet in the Fall of 1941 were added over 30,000,000 horsepower of diesels alone in little more than three years.

On December 7, 1941, there were 20 radar installations in the Fleet. Before the war ended, every one of the Navy's major warships and auxiliaries had one or more radars installed. Including radio, radar, and underwater sound equipment, more than 35,000 pieces of equipment were produced for the Navy's ships and its shore establishments. To this must be added over 10,000 pieces of electronics equipment supplied to the Marine Corps.

Ship and equipment maintenance posed problems almost as difficult. Repair-part depots had to be established throughout the world. Nearly 10,000,000 square feet of storage space were needed for the more than 200 acres of repair parts that had to be on hand to fulfill 10,000 repair-part requests per month for nearly 250,000 pieces of equipment.

The defeat of both Germany and Japan permitted halting a large part of the wartime program. Thousands of contracts were terminated, starting even before the formal surrender of Japan. Thousands more were terminated as inventories of stocks on hand permitted. By the end of 1945 only 57 private shipyards were engaged in ship construction, and by the end of 1946, this figure was further reduced by additional cancellations and by completions of contracts to 10. Thus, with the 10 naval shipyards, there are now 20 shipyards engaged in naval construction—the same number as began the emergency program in June 1940. So ends a six and a half year cycle, unprecedented in the shipbuilding annals of any nation.

The table which follows illustrates the precipitate drop in ship construction. The last full year of war, 1944, is compared with the first full year of peace, 1946. Ships are listed by major groupings, and the figures represent both the number of ships completed and the tonnage thereof.

	1944		1946	
	No.	Tons	No.	Tons
Combatant	379	1,047,000	73	425,000
Mine Craft	178	102,000	0	0
Patrol Craft	390	56,000	6	1,000
Auxiliaries	235	320,000	43	153,000
Landing Craft	37,502	1,514,000	21	12,000
District Craft	521	128,000	48	12,000
New Construction—				
Total	39,205	3,176,000	191	603,000

The majority of ships completed in 1946 were combatant ships. Thirty-eight were destroyers of the 2,200-ton *Allen M. Sumner* Class or the 2,425-ton *Gearing* Class. Fourteen were fleet submarines of 1,525-1,570 tons standard displacement. The table which follows sets forth the names of the larger combatant ships, carriers and cruisers, which were completed during 1946. Completion dates, building yard, and hull numbers are also included.

Name & Hull No.	Builder	Completed
<b>87,100-ton Carriers:</b>		
<i>USS Leyte</i> (CV-32)	Newport News S.B. & D.D. Co. Newport News, Va.	11 Apr. 1946
<i>USS Kearsarge</i> (CV-33)	New York Naval Shipyard	8 Mar. 1946
<i>USS Tarawa</i> (CV-40)	Norfolk Naval Shipyard	26 Jan. 1946
<i>USS Valley Forge</i> (CV-45)	Philadelphia Naval Shipyard	15 Nov. 1946
<i>USS Philippine Sea</i> (CV-47)	Bethlehem, Fore River Quincy, Mass.	3 May 1946
<b>14,600-ton Light Carrier</b>		
<i>USS Sazan</i> (CVL-48)	New York S.B. Corp.	10 July 1946
<b>13,700-ton Heavy Cruisers</b>		
<i>USS Oregon City</i> (CA-122)	Bethlehem, Fore River	15 Feb. 1946
<i>USS Albany</i> (CA-123)	Bethlehem, Fore River	14 June 1946
<b>13,600-ton Heavy Cruiser</b>		
<i>USS Toledo</i> (CA-133)	New York S.B. Corp.	24 Oct. 1946
<b>10,000-ton Light Cruisers</b>		
<i>USS Manchester</i> (CL-83)	Bethlehem, Fore River	25 Oct. 1946
<i>USS Galveston</i> (CL-93)	Cramp S.B. Co., Philadelphia	24 May 1946
<i>USS Huntington</i> (CL-107)	New York S.B. Corp.	21 Feb. 1946
<b>6,000-ton Light A. A. Cruisers</b>		
<i>USS Juneau</i> (CL-119)	Federal S.B. & D.D. Co. Kearney, N.J.	14 Feb. 1946
<i>USS Spokane</i> (CL-120)	Federal S.B. & D.D. Co.	14 May 1946
<i>USS Fresno</i> (CL-121)	Federal S.B. & D.D. Co.	25 Nov. 1946

One of the factors which influenced the decision to complete those ships upon which considerable work had been done by the end of the war was that ships completed early in the war had been hard used. Many of the 27,000-ton *Essex*-Class carriers, and the 10,000-ton *Cleveland*-Class cruisers, for example, though not old in years, are old in service. Spearheading our Pacific offensives, some of these ships had steamed 100,000 or more miles at high speed without major overhaul. The wear and tear of three or four years of war service was found to be roughly equivalent to twelve to fifteen years of normal peacetime cruising. Maintenance and operating costs of the older wartime ships are consequently higher. Many of these ships had suffered heavy damage as the result of enemy action, and had been repaired hurriedly to get them back into action.

To minimize peacetime costs and to protect the government's investment in ships partially constructed, the Congress approved the completion of certain carriers, cruisers, and destroyers, even though numerous sister ships had been constructed during the war. When completed, these new ships would take their place in the Navy's postwar active fleets. Many of the older "new" ships have ac-

cordingly been assigned to the Reserve and Inactive Fleets.

Long before the war's end, the Navy had made plans to protect its multi-billion dollar investment in national security by preserving its under-age combatant vessels in inactive status. Various types of auxiliaries and landing craft are similarly being preserved against their need in a future national emergency.

The 1975 vessels of the Reserve and Inactive Fleets cost some \$10,000,000,000 to build. However, by efficient and economical preservation techniques perfected by the Bureau of Ships during World War II, this multi-billion dollar investment in national security will be maintained at but a fraction of the initial cost of construction.

The economy of the Navy's preservation techniques may be illustrated in terms of money, labor and time. The initial cost of inactivating a \$60,000,000 aircraft carrier is approximately \$300,000. Annually thereafter, the maintenance costs are approximately \$10,000. This same carrier, which was built in two to four years during the war, and required over 2,000,000 man-days of labor, could be made ready to go back into service within 30 days, if necessary. Begun in late 1945, the program of preserving these ships was approximately 65 to 70 percent complete by the end of 1946 and will be completed early in 1947.

In addition to the program of inactivating ships for future service, the Navy is disposing of large numbers of vessels which are obsolete, or badly damaged, or of types no longer needed in the numbers on hand. The degree of this program of disposal of surplus vessels is indicated by the following figures. At the end of 1940, there were 1,243 vessels on hand; in 1941, it increased to 2,789; in 1942, to 11,351; in 1943, to 29,121; in 1944, to 59,755; and by June 30, 1945, there were 67,952 vessels on hand. The on-hand figures do not include ships lost, or vessels transferred or leased to other nations or other government agencies. By January 1, 1947, excluding vessels already disposed of and vessels in the process of disposal, the Navy will have 17,024 vessels on hand, totaling 8,550,000 tons.

Ships still under construction in 1947 will be built at a far less strenuous pace than in wartime. With a five-day working week and an eight-hour working day, completion will be delayed, but the man-hours of labor required should be reduced.

As part of the over-all fiscal policy of curtailing cash expenditures in order to balance the national budget, relieve inflationary pressures, and release men, materials, and transportation facilities for housing and other essential programs, it was announced in August 1946 that the delivery of five ships then building in three Naval Shipyards would be delayed for approximately a year. The Naval Shipyards and the ships affected by this delay are as follows:

New York Naval Shipyard	<i>USS Oriskany</i> (CV-34)
Charleston Naval Shipyard	<i>USS Bryce Canyon</i> (AD-36)
Boston Naval Shipyard	<i>USS Wagner</i> (DE-539)
	<i>USS Vandewer</i> (DE-540)
	<i>USS LST-1154</i>

The construction of eleven ships building in six private shipyards was to be continued, but at a somewhat slower pace.

Planning a reduction in expenditures by delaying the construction of these vessels, the Bureau of Ships had to consider the backlog of shipbuilding and repair work in the private as well as the Naval Shipyards. Although the Naval Shipyards had suffered heavy reductions in force as war work was

completed and expenditures were reduced, the three yards concerned were all assured of sufficient repair work to permit them to retain a nucleus of their more skilled civilian workmen. The prospect of continued and stable employment in the private shipyards was not as bright. It was feared that if the remaining Navy contracts in these yards were suspended or deferred, irreparable harm would be done to the shipbuilding industry. Moreover, if once delayed, the ultimate cost of completing the ships building in the private yards would probably be greatly increased.

The construction of two other ships was also delayed during 1946, but for different reasons. They are the 45,000-ton battleship *Kentucky* and the 27,000-ton battle cruiser *Hawaii*. On September 8, 1946, marking a new era in the striking power of naval warships, it was announced that these two ships would be the Navy's first guided-missile warships. It is still too early, however, to make any forecast of the ultimate design characteristics of these ships, other than that they will be guided-missile warships.

A new class of three heavy cruisers is under construction, the *Des Moines*, the *Salem*, and the *Newport News*. They will displace 17,000 tons, whereas the previous *Baltimore*-Class heavy cruisers displaced only 13,600 tons. Not only will these three new heavy cruisers be larger than any ever built before, but they will carry to sea a new rapid-firing eight-inch gun. Two of these new heavy cruisers, the *Salem* and the *Newport News*, will be air-conditioned in living and berthing spaces. A development based upon war experience, these experimental installations will probably lead to the air-conditioning of all major combatant ships in the future.

Two new light cruisers, the *Worcester* and the *Roanoke*, are also under construction. The largest light cruisers ever constructed, they will displace 14,700 tons. But the biggest difference between these cruisers and their 10,000-ton *Cleveland*-Class predecessors is in their armament. These ships will mount twelve 6-inch dual-purpose rapid-firing guns in twin turrets—three forward and three aft. They will have no 5-inch A.A. battery, but will depend upon an array of smaller A.A. weapons for close-in work against such planes as the 6-inchers may have failed to keep at a respectful distance.

Most of the ships now under construction are scheduled for completion during 1947.

EDWARD L. COCHRANE.

**SHOOTING.** Frank Bennett of Miami, Florida, an airlines pilot, annexed the highest prize in trap-shooting—the Grand American Handicap—in the annual tournament at Vandalia, Ohio, but only after breaking 24 out of 25 targets in a three-way shootoff after he, John McHale, London, Ontario, and J. L. Nicolai, Denver, Colorado, had tied with 98 x 100.

Mrs. Roy Meadows of Grimes, Iowa, annexed the top award for women with 20 x 25 after a deadlock with Mrs. Rose Waite, Lakewood, Ohio. Among other major winners were Vic Reinders, Waukesha, Wisconsin, who retained honors as Champion of State Champions and annexed the pro-amateur award and Mrs. Ruth Knuth, Indianapolis, who kept her role as queen of the women State champions.

The Great Eastern, most important event of skeet shooting—last held in 1942—was not renewed, the only major skeet meet of the year being staged at Indianapolis where Charles Poulton, San Antonio, Texas, won with a score of 75

straight after tying three rivals at 100 in regular competition.

The national rifle and pistol championships, following a lapse since 1941, were put on at Camp Perry, among the major winners being Harry Reeves, Detroit, who successfully defended his all-around pistol laurels. Gene Moore, Washington, Pennsylvania, led the small-gauge rifle marksmen.

THOMAS V. HANEY.

**SIAM.** A constitutional monarchy in southeastern Asia; occupied by Japanese armed forces from December, 1941, until the surrender of Japan in September, 1945. The national name, Siam, was restored by the Government in 1945 in place of Thailand which had been the designation of the country from 1939 to 1945. To the natives the country retains the name, Muang Thai (Land of the Free). Ruler: King Phumiphon Adundet (born December 5, 1927), proclaimed King on June 9, 1946, following the death of his brother, Ananda, on June 9, 1946.

**Area and Population.** Siam's area amounts to 200,-148 square miles. The estimated population on Mar. 31, 1940, was 15,718,000. Chief cities: Bangkok (capital) 750,000 inhabitants in prewar times, Chienmai 544,000, Ayuthia 300,000. Nine-tenths of the people are Siamese. In December, 1941, there were 500,000 Chinese, 500,000 Indians and Malays, 60,000 Cambodians, and some 2,000 Europeans resident in the country.

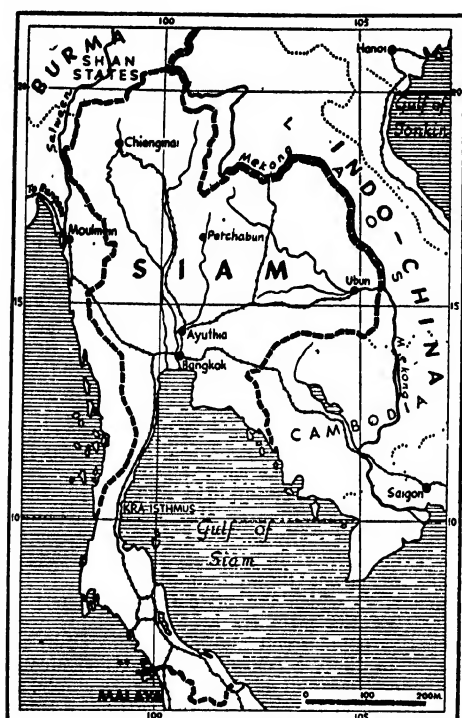

**Government.** The constitution of Dec. 10, 1932, transformed Siam from an absolute into a limited monarchy. Nominally the King exercises executive power through a State Council (Cabinet) and legislative power through an Assembly of 182 members, to which the State Council is responsible. Half the members of the Assembly were elected by popular vote and half nominated by the Crown. In 1946, a constitutional revision created an Upper House, in addition to the Assembly. At the same time, the members of the Lower House became entirely elective as the system of nominating one-half the Assembly was abolished.

**Events, 1946.** Under the pressure of demands from Great Britain, France, and China, Siam could view 1946 as one of the more critical years in her history. The end of the war found Siam in a dubious position; Great Britain and France undertook to deal with her as a defeated nation because of the Axis treaty made by Premier Songgram immediately after Pearl Harbor, while the United States, never having declared war on Siam and having extensively participated with the Siamese underground, adopted a softer, more conciliatory attitude toward Siam's dilemma.

Siam entered her postwar period with the signing of a peace treaty on January 1 with Great Britain and India and the signing of letters of agreement with Australia for recompense to Australian citizens and interests for damages suffered. In the terms of the settlement, Premier Seni Pramoj's government agreed to return to Great Britain all territories seized after December 7, 1941, make compensation for damages to British subjects, restore and maintain all British properties, permit British commercial concerns to resume business, and renewed British concessions on navigation and civil air services. In addition, Siam agreed to pay reparations for damages done to British property by Allied bombing and sustain the 100,000 baht daily cost of the British occupation forces.

The most important economic provisions of the treaty concerned a free gift of 1,500,000 tons of rice to Great Britain. Since Siam is dependent on

rice exports, the loss of this quantity, in addition to the occupation and reparations payments, forced Siam to rely on Britain for economic aid. Actually, the treaty provisions placed Siam's economic life in the British orbit. In another clause Siam agreed to place her major export commodities of rice, tin, rubber, and tea under international control until September 1947.

Foreign Policy Association

Politically, aside from the agreement on prewar frontiers, Siam gave assurance that no canal would be constructed across the Kra Isthmus without prior consent of Great Britain.

In the international field, Great Britain agreed to support Siam's candidacy to the United Nations, while Siam promised to collaborate with international arrangements for her security approved by the United Nations Security Council.

The completion of the treaty was followed on January 5 by the United States-Siam resumption of diplomatic activities after nearly a four-year break. Further ties were strengthened at the end of January by Siam's agreement to recognize the treaties and other international agreements, including the commercial treaty of 1937 and the extradition treaty of 1927, in force with the United States before the outbreak of the war.

In Siam's first postwar election, in which all persons over 20 years old were permitted to vote, with no restrictions on race, sex, or literacy, Khuang Abhaiwong, Premier during the last year of the Japanese occupation, succeeded Seni Pramroj as head of the cabinet. Pramroj, however, was retained as Foreign Minister.

Many of the members of the new Assembly were drawn from the anti-Japanese resistance movement. Representatives of the Regent, Luang Pradit, who had worked for the anti-Japanese movement, found no seats in the Assembly, partly because they were not nationally popular, but mostly be-

cause of a rift that had developed between Abhaiwong and Pradit after the Japanese surrender.

The new regime entered power to find themselves beset by various difficulties. Siam's status could not be clearly defined until treaties were concluded with France and China. The Siam-China issue was irritated by the presence of a Chinese population in Siam, particularly in towns near Bangkok, where anti-Chinese incidents arose. Economic difficulties were intensified by the terms of the Anglo-Siamese treaty, which seriously impeded Siam's ability to pay for imports with exports. Shortages were most acute in medical supplies, textiles, paper, and leather products.

The Assembly was further confronted by the necessity of voting on constitutional changes, including the vesting of legislative powers in a bicameral Assembly. The Lower House, elected directly by the people, held the responsibility of selecting the Upper House, to be composed of mature, educated men. With the return to Siam of King Ananda in December of 1945, the Regency of Pradit formally ended and the controversy of Monarchy versus Republic loomed as an important issue.

During a debate on a price-and-wage control bill in the assembly, sponsored by the anti-government Cooperative party on March 18, Premier Abhaiwong and his cabinet resigned, despite a favorable vote of confidence by the not too pro-government Assembly. Within a week, former Regent Nai Pride Phanomyong was chosen Premier by the Assembly. When King Ananda Mahidol opened the new Parliament on June 2, the Premier followed the constitutional requirement and tendered his resignation. The Assembly selected him Premier on June 7 and submitted his nomination to the King for formal appointment.

On the day previous to his nomination, Phanomyong announced that the United States had agreed to release all United States-held Siamese assets. The diplomatic conflicts with France, heightened by territorial complications, were not so easily settled as were the British claims. Even before the end of the war, France indicated a strong desire for the return of those portions of Cambodia and Laos which had been ceded to Siam in 1941 under Japanese pressure. Britain, persuaded by France that any change in the international status quo of a colonial empire would affect all empires, supported the French request that Franco-Siamese negotiations be conducted simultaneously with the British treaty conversations. Siam, loath to give up those areas in which strides had been made in incorporation and cultural assimilation, contended that because of Vichy consent to the territorial transfer, there had been no state of war between France and Siam. Originally, France moved into Cambodia in 1907 and absorbed three provinces. The lack of an agreeable premise on which negotiations could be based eliminated the possibility of a Franco-Siamese treaty. The United States' attitude, shaped by the State Department's refusal on January 16 to recognize the wartime territorial acquisitions from Indo-China, favored the claims of France.

By late May, the disagreement showed signs of a crisis. French troops, stationed in Indo-China, carried an attack supported by planes and artillery across the Mekong River near Vientiane. Heavy fighting occurred between more than 800 French troops and Siamese police and civilians. On May 28 Siamese Foreign Minister Khuang Abhaiwong announced that his government hoped to negotiate directly with France on the disputed Cambodia

and Laos territories. Pridé Phanomyong, President of Siam's Council of Ministers, telegraphed an appeal to the United Nations Security Council on May 27, charging France with "concerted action against Siamese sovereignty and the preservation of peace" and asked the United Nations for "your sympathy, your assistance and cooperation in re-establishing peace." French reports termed the charges of aggression "sheer fantasy," but admitted that some French troops did cross the river to pursue Indo-Chinese and Siamese bandits who had been pillaging towns in the French area. United States and British spokesmen said they would support Siam's right to present the case to the Security Council, under Article 35 of the Charter, which permits a non-member nation to file complaint against a member nation if it is willing to accept a peaceful settlement of a dispute.

France officially denied any military aggression on May 30 and said that the small punitive incursion was made necessary by the "manifest inability of local Siamese authorities to control the activity of armed bands of Laotian and Annamite rebels." Identical notes were sent by the French Foreign Office to the British and United States Ambassadors in Paris, requesting that Siam be informed that the Laos and Cambodia territories acquired from Marshal Pétain's Vichy Government in 1941 had not yet been returned to France.

Siam formally applied for membership in the United Nations on May 31 and reiterated its complaints against France. It assured the United Nations Secretary General that the Siamese Government and people were ready "to assume their full responsibility in carrying out the obligations as set forth in the Charter of the United Nations." On the same day Siam closed sections of the Siam-Indo-China border and an American mission reported that the French troops had withdrawn across the Mekong River.

The death of Ananda Mahidol, 20-year old King of Siam, on June 9, relegated the Franco-Siamese border quarrels to temporary oblivion. Ananda was found in the royal palace with a bullet wound in his head and the authorities pronounced the death "accidental." Twelve hours later the Parliament unanimously named his brother, Prince Phumiphon Adunet, 18, as the new King, and a week later elected Prince Chanat and Phya Manaveraj Sevi, speaker of the old National Assembly, to a Council of Regency to guide the King in matters of state.

The nature of the King's death caused much suspicion and doubt throughout the nation. Leaflets were distributed accusing the Premier and his Government clique of plotting to slay the king and as general tension quickly mounted, Pridé Phanomyong acted to quell possible unrest by applying censorship to the press and naming General Abdul Dejarat, powerful leader of Siam's wartime underground forces, commander of the Siamese Army.

Public suspicion of the popular king's death forced a post-mortem hearing and on July 1, a twenty-man medical investigation board reported that the King was probably assassinated. They refuted the Government's verdict of accidental death, asserting this was the least likely of three possibilities. The American representative, Dr. Cort, said, "It looks like murder."

As the controversy over the Franco-Siamese border clashes diminished, France renewed her demands for the return of the disputed territories. The order forbidding French troops from entering Siam was rescinded as a spokesman for Admiral Georges Thierry d'Argenlieu, French High Com-

missioner for Indo-China, said that France would resort to "force of arms" if the dispute could not be settled peacefully.

The Siamese Government formally submitted the dispute to the judgment of the United Nations Security Council on July 15 in a message that told of the "profound anxiety" that had arisen in Bangkok over the border situation. Accusing France of perpetrating incidents tending to disrupt the peace, Siam agreed "to accept any solution proposed by the Security Council in regard to immediate matters at issue as well as in regard to all matters, territorial or otherwise, connected therewith." A Siamese delegation to appeal the dispute was expected to reach the United Nations after elections in Siam were completed.

Siam tested its new democratic Constitution on August 5 in an election to fill the 88 seats in the Lower House of Parliament, which were vacated after the new Constitution abolished the appointive memberships made by the King. A large majority of these former House members were selected by the old Assembly to fill the Upper House. Premier Pridé Phanomyong's Constitutional Party, the strongest party in Siam, was opposed by the Democratic Party, led by Khuang Abhaiwong, member of the mission to the Security Council and former Premier.

The results of the election showed a clean sweep for the Constitutional Party, which won 70 of the 88 seats, with the remainder of the seats being about equally divided between the Democratic and Co-operative parties. As was customary, Phanomyong resigned and was succeeded by Rear Admiral Thawan Thamrong Nawasawat, former Judge Advocate of the Siamese Navy and one of the leaders in the 1932 revolution which established a constitutional government.

With only one exception, the new Cabinet of 18 members was composed of elected members of the National Assembly. The make-up of the Cabinet showed eleven members of the Phanomyong Cabinet and five from the wartime ministry of Premier Pibul Songgram, who had collaborated with the Japanese. Eight members, including Foreign Minister Direck Jayanama, were prominent in the pro-Allied resistance movement.

In domestic affairs the new Government was handed the problem of rehabilitating Siam's overall economy, particularly its war-deteriorated railroads and industries, and its rice production. Immediate efforts to increase rice production were begun with the distribution of seed rice and fertilizer.

On August 14, the same day that Prince Subha Svasti arrived in Washington to prepare Siam's representations in the border dispute, the Soviet Union and France expressed opposition to Siam's application for admission to the United Nations. While the Soviet objection was based on the absence of diplomatic relations with Siam, F. De Rose, the French delegate, stated that Siam still maintained sovereignty of those territories taken with the aid of the Japanese. Though the dispute was in the process of negotiation, he said, France considered that a state of war still existed between the two countries and could not sanction Siam's admission to the United Nations because it would constitute "acquittal of its policy of aggression in the past before having proved by its deeds its willingness to repair the damage it has caused."

Speeches favoring Siam's admission were given by the United Kingdom, China and the United States.

Since the territorial dispute was making no prog-

ress in the form of a settlement, France proposed on August 1 that the dispute be arbitrated by the International Court of Justice at The Hague and requested the Siamese to withdraw from the contested area and leave the administration of it to a third power to be named by the United States. Until the International Court fixed the nationality, the area would be governed by the interim administration, France suggested.

On August 26 the French Ministry of Foreign Affairs announced withdrawal of the arbitration offer and said that only evacuation of Siamese troops from the disputed area could avert the possibility of military action. The Ministry explained that the withdrawal was provoked by an "outrageous" attack on the Indo-Chinese border town of Siemreap on August 7 made by Siamese bandits. The ministry added that any further acts of territorial aggression would meet retaliation by French troops. Within a few days of the announcement, four French warcraft were reported in Siamese territorial waters.

The territorial dispute between Siam and France approached a stage nearer settlement on October 14 when the Siamese Cabinet agreed to return the four controversial frontier areas in Cambodia and Laos to French Indo-China. After a 91-20 vote of approval by Siam's Chamber of Deputies, the two nations signed an agreement on November 17 providing for the immediate establishment of a Franco-Siamese commission to study the frontier problem and recommend settlement. Representatives of three neutral nations will serve on the commission. Subsequent negotiations on the disputed areas provided for the gradual withdrawal of Siamese officials who will be replaced by the French.

By unanimous action of the United Nations General Assembly on December 15, Siam became the fifty-fifth member of the United Nations.

On December 10 the United States Department of State announced an agreement with Siam, Australia and Great Britain on the distribution of Siamese tin. Aimed to stimulate a greater flow of tin to world markets, the agreement included the following provisions:

1. The combined tin committee will determine allocations. The United States will get 2,000 tons of tin metal for 1946 and probably substantially more next year.
2. The United States and Britain will buy equal quantities of Siamese tin concentrates until March 31, 1947.
3. A four-member commission will be set up to speed movement of Siamese tin metal stocks and concentrates to world trade channels.
4. The price for Siamese tin will be based on prices in Malaya.

**Education and Religion.** There is free and compulsory primary education, but only about 40 percent of the adult population are literate. As of Mar. 31, 1939, there were 12,809 government, local public, and municipal schools, with a total of 1,567,745 pupils. Bangkok has two state-controlled universities. The religious composition of the population in 1937 was: Buddhists, 13,752,091; Mohammedans, 626,907; Christians, 69,227; others, 15,880.

**Production.** Over four-fifths of the working population is engaged in agriculture and fishing. The chief crop is rice, which is both the main article of diet and the principal export. Production in 1940-41, 4,923,350 tons of cleaned rice. Other leading crops are tobacco, coconuts, pepper, and cotton. Rubber and tin ore are the most important products after rice. Livestock (1938): 5,711,720 bullocks, 5,551,232 buffaloes, 385,565 horses, and 10,970 elephants. Tungsten, gold, silver, coal, lead, antimony, copper, rubies, and sapphires are produced. Teak lumbering is an important industry.

Manufacturing is largely restricted to lumber and rice milling.

**Foreign Trade.** For the year ended Mar. 31, 1941, merchandise imports were valued at 163,400,000 bahts (128,200,000 in 1939-40); exports, 257,600,000 bahts (208,700,000). Values of the chief 1940-41 exports were (in millions of bahts): rice, 142.8; tin ore, 48.4; rubber, 39.3; teak wood, 5.9. Rice exports totaled 1,625,400 metric tons; rubber 43,700 metric tons.

**Finance.** The budget was changed to the Christian calendar year basis beginning Jan. 1, 1941. Ordinary budget estimates for 1942 placed receipts at 210,000,000 bahts and expenditures at 259,000,000; in 1941 they balanced at 138,000,000 bahts. There was a treasury reserve estimated at 31,857,465 bahts on Jan. 1, 1942. Public debt on Sept. 30, 1941, totaled 81 million bahts (internal 26.2 million bahts; external 54.8 million bahts). The baht exchanged at an average of \$0.3515 in 1940.

**Transportation.** At the time of the Japanese invasion, Siam had about 2,048 miles of railway line, 5,574 miles of highways, and state-controlled airlines linking the principal cities. Air connections with Japan were opened in 1942. During 1939-40 a total of 960 vessels of 1,425,989 tons entered the port of Bangkok.

JOSEPH P. BLANK.

**SIERRA LEONE.** A British West African colony (271 square miles) and protectorate (27,669 square miles, including those areas of the colony treated as protectorate). Total area, 27,940 square miles. In 1940 the total population was estimated at 2,000,000. Capital, Freetown (80,000), which is an important naval base. The colony and protectorate are administered by a governor, assisted by an executive council and a legislative council of 23 members, three of whom are elected and three of whom are paramount chiefs of the protectorate.

**Production and Trade.** The mining industries are important and produce diamonds, gold, and iron for export, as well as chromite and platinum. Kola nuts, palm oil, palm kernels, groundnuts, piassava, ginger, rice, cassava, and hides are produced. Palm kernels, kola nuts, palm oil, and ginger are the chief exports. Textiles, spirits, hardware, and tobacco are the principal imports. A large proportion of the imports are obtained from the United Kingdom.

**SILVER.** Mine production of silver dropped in 1946, but its place in the headlines was gained principally as a result of a prolonged controversy in Congress as to the price at which the United States treasury should buy and sell the metal. The issue had added importance, in that it indirectly affected the nation's monetary system.

Congressional representatives of silver-producing states battled to increase the price which the Treasury pays for newly mined silver from 71.11 cents per fine oz. to \$1.29, its full monetary valuation. The latter price, it was contended, also more nearly represents the price which would prevail in a "free market" than the 71.11 cents figure. Leading the fight against the rise were manufacturers using silver, who wished to keep the price low and who also wished to regain the privilege of purchasing from the Treasury's stocks of silver not earmarked as backing for currency ("free silver"). Sales of Treasury "free silver" for manufacturing had been made since July 1943, until legislation permitting such sales expired December 31, 1945. After much legislative maneuvering, the conflict of the silver mining and silver manufacturing interests ended

in compromise with legislation by which the Treasury's purchase price was raised, in effect, to 90.5 cents and sale of "free silver" for industrial uses was permitted at the same price. A bill carrying these provisions was signed by the President, July 31, with purchase provisions covering silver mined after July 1. On August 1, OPA raised its ceiling on foreign silver to conform with this new price level and on Nov. 1, it removed silver from control.

With sale of Treasury "free silver" suspended from the end of 1945 until August 1, the supply of silver for industrial purposes was critical. It had been estimated that industry in the United States could consume 125,000,000 oz. during the year, with domestic production plus imports totaling only about 80,000,000 oz. Aside from the manufacture of silverware and jewelry, the shortage severely affected the manufacture of certain types of electrical equipment, for which silver is used for contact points, bearing alloys, and photographic film and paper. At the time the bill authorizing Treasury sale was passed, it was estimated that 225,000,000 oz. of "free silver" might be made available.

Paradoxically, following authorization given the Treasury to sell "free silver" for industrial purposes, and the concurrent higher price, few buyers appeared for the Treasury metal. Large amounts of foreign silver appeared following the removal of price ceilings, and at the end of the year the free market price was 83 75 cents per oz., far under the Treasury's price. The quantities of foreign silver thus becoming available appeared sufficient to meet all immediate demands.

Silver is produced chiefly as a by-product of copper, lead, zinc, and gold mining. Mining of the three first named metals was greatly contracted during the first half of the year by strikes in many of the largest mines and at the smelters serving them, and throughout the year by manpower shortage and high costs making working of marginal deposits uneconomic. Gold was mined on a relatively small scale during the year. Thus mine production of silver for the year dropped to approximately 21,000,000 oz. (1945: 29,000,000 oz.) the lowest since 1871. Principal producing states were Idaho, Utah, Arizona, Montana and Colorado.

CHARLES T. POST.

**SKATING.** Gretchen Merrill, a youthful blonde from Boston endowed with the rare combination of beauty and athletic prowess, retained her crown as national figure-skating queen last year, and in so doing became the first to win the women's title four consecutive times. Her poise and skating ability enabled her to finish far ahead of her field in the United States championships at the Chicago Arena and give her the laurels for the sixth time in nine years. Miss Janette Ahrens of St. Paul was runner-up.

Miss Barbara Jones, Philadelphia, captured honors among the junior women while the novice event went to Miss Gloria Peterson, Seattle. The men's championship, abandoned during the war years, returned to the program and the title was won by Richard Button, of Englewood, N.J., Miss Donna Pospisil and J. P. Brunet of New York, took senior pairs honors and Miss Anne Davies and Carleton Hoffman, Jr. of Washington were judged best of the senior dance teams. The junior pairs championship was won by little Yvonne Sherman and Robert Swenning, New York City couple.

Bob Fitzgerald of Minneapolis returned from Army service and the flashy Air Corps veteran dominated the major speed-skating championships,

dethroning a fellow townsman, Ken Bartholomew, in both the national and North American meets. Bartholomew placed second in both. Miss Elaine Gordon, Chicago, carried off the United States senior women's crown, and a Canadian skater, Miss Eileen Whalley, Winnipeg, took premier honors in the North American contests.

THOMAS V. HANEY.

**SKIING.** With the lifting of travel restrictions and the return of many stars from the armed forces this fast-growing sport had a busy Winter during 1946 and many championship events that had been missing since 1942 were back on the card.

Among the most colorful meets of the season was the national jump at Steamboat Springs, Colorado—where children are taught to ski soon after learning to toddle—and Alf Engen, veteran from Sun Valley, Idaho, captured the Class A crown with a leap of 259 feet, 11 better than the record for the Howelson Hill course, though 30 feet off the national mark established by the late Torger Tokle at Iron Mountain, Michigan, in 1942.

Engen's form and distance enabled him to amass 229 55 points, just enough to dethrone Art Devlin, defending champion from Lake Placid, New York, who had 229 45. Merrill Barber, Brattleboro, Vermont, placed third.

Other champions were Wahldemar Fahlstron, Lake Placid, Class B; Warner Schoor, Madison, Wisconsin, Class C, and Ernest Jacobson, Chicago, Veterans' group.

The United States downhill and slalom meets, held on Cannon Mountain at Franconia, New Hampshire, drew crack fields, and Barney McLean of Denver, with second places in both tests, won combined honors. Steve Knowlton, a former ski trooper from Colorado, thrilled the thousands of onlookers with a daring, fast dash to victory in the downhill whirl to take that crown from McLean and a 20-year-old Army lad, Dick Movitz of Salt Lake City, captured the slalom. Knowlton, fourth in the latter, was runner-up for the combined laurels.

Miss Paula Kann, North Conway, New Hampshire, annexed the Gibson Trophy for the fourth successive year when she placed first in the women's downhill test and Miss Rhona Wurtele, Montreal star, won combined laurels by taking the slalom and finishing fifth downhill. Miss Wurtele's 245 points for the two events was only two more than tallied by Miss Barbara Kidder, Denver coed, who had two second places to her credit.

Listed among the big events of the year was the Eastern downhill and slalom meet at Stowe, Vermont, and Kristofer Berg, stocky Norwegian student attending Harvard, gave a sparkling exhibition for a sweep of the downhill, slalom and combined titles. The Eastern cross-country grind was held at Laconia-Gilford, New Hampshire, and the Class A crown went to Allison Merrill, Andover, Maine, with Ralph Townsend, Lebanon, New Hampshire, the runner-up.

Another highlight of the campaign was the twenty-fifth anniversary carnival of the Sno Birds Club at Lake Placid, where Canada defeated the United States in 10-man team competition. Although Ralph and Paul Townsend took first and second in the langlauf and Ralph won combined honors, the Canadians outscored their rivals Lucien Laferte of Three Rivers, Quebec, annexed the jump as the visitors swept the first four positions to count heavily in that event.

Most of the major college meets were restored to the schedule. Dartmouth triumphed in the Middle-

bury and Vermont carnivals, but the Big Green had to be content with second honors when it played host to ten other college squads in its thirty-sixth annual games at Hanover, New Hampshire. McGill, with Kaare Olsen, Norwegian student, its big ace, captured the top prize at Dartmouth. University of Washington skiers defeated California for first place in the Vanderbilt intercollegiate meet at Norden, Calif.

Misses Rhona and Rhoda Wurtele, twin sisters from Montreal's Penguin Club, were among the year's best feminine performers and they helped Canada defeat a United States women's team at Lake Placid to give the Dominion girls the Kate Smith Trophy for the sixth time in ten seasons. Misses Kidder, Kann and Dorothy and Margaret Burden of McGill were others who ranked high.

THOMAS V. HANEY.

**SLOAN FOUNDATION, INC.,** The Alfred P. Incorporated in 1936, the Foundation aids accredited schools and colleges in developing new "patterns" in economic education. On December 31, 1945, its capital assets were valued at \$4,885,189.29. Up to the same date, the Foundation had made grants and donations amounting to \$6,602,088.34. At present the Foundation is enabling colleges and universities to promote popular economic education through radio, recordings, motion pictures, books, and pamphlets, fellowships, and class instruction. Among such projects aided by the Foundation are: the University of Chicago Round Table of the Air, a weekly radio discussion of economic phases of national and international questions; the New York University Film Library, which distributes sound motion pictures and recordings; and the *Public Affairs* pamphlets, containing popular digests of current economic researches, issued continuously by the Public Affairs Committee of New York; and the New Tools for Learning Bureau of the New Jersey State Teachers College at Montclair, New Jersey, which produces dramatic radio programs illustrating economic institutions and principles for broadcasting by transcription.

In addition, the Foundation is currently providing support for seminars on current economic problems at New York University, American University, and at the Universities of Denver, Southern California, and California. Members of these seminars include graduate students and community leaders. The Foundation also lends its support to the Department of Government Management at the University of Denver.

In the field of applied economics, the Foundation aids the State universities of Kentucky, Florida, and Vermont in carrying on experiments designed to help low-income groups. The experiments aim to discover whether solely through instructing school children in simple, inexpensive ways of improving diet, housing, and clothing, the community level of living can be raised. To enable teacher-training institutions throughout the country to study these experimental centers at first-hand, special grants have been made to the American Association of Teachers Colleges for traveling fellowships.

During the year 1945 the Foundation made a special grant of \$4,000,000 to Memorial Hospital for the erection and maintenance of the Sloan-Kettering Institute for Cancer Research. It is expected that this Institute will have been constructed and its staff assembled sometime in 1947.

**SMITHSONIAN INSTITUTION.** The affairs of the Institution are administered by a Board of Regents

consisting of the Chief Justice of the United States, the Vice President, three members of the Senate, three members of the House of Representatives, and six citizens other than members of Congress.

Research and explorations, which normally form the major part of the Institution's program for the "increase of knowledge," have been curtailed, owing to wartime conditions. The new field expeditions that were carried on were concerned in the main with matters connected with the conduct of the war, or with commitments dating back to the prewar period, or with the improving of cultural relations with the other American republics.

The "diffusion of knowledge" is carried on by publication of the results of scientific research and exploration. The publications of the Institution proper and the bureaus under its administrative direction appear in 13 distinct series as follows: *Smithsonian Institution*, Annual Report (with general appendix made up of selected articles reviewing the year's advances in science), Contributions to Knowledge (suspended), Miscellaneous Collections, and special publications; *National Museum*, Annual Report, Bulletin, Proceedings, and Contributions from the National Herbarium; *Bureau of American Ethnology*, Annual Report and Bulletin; *Astrophysical Observatory*, Annals; *National Collection of Fine Arts*, Catalog; and *Freer Gallery of Art*, Oriental Studies. Copies of all publications in these various series are distributed free to a large list of libraries, learned societies, and specialists throughout the world, and certain of the less technical publications, such as the Smithsonian Reports, are widely distributed among the general public.

The Smithsonian library, made up of 10 divisional libraries and 35 sectional libraries, now contains 918,460 volumes, pamphlets, and charts.

**SOCIAL DEMOCRATIC FEDERATION, United States of America.** A non-political educational and propaganda association, organized in 1937, devoted to spreading the principles of democratic socialism. National Chairman: Algernon Lee, New York, New York. Secretary: August Claessens, New York, New York. Headquarters: 7 East 15th St., New York, New York.

**SOCIALIST LABOR PARTY.** A political party that proposes that all socially needed land, industries and utilities be taken over by society and operated socially for use. National Secretary: Arnold Petersen; National treasurer: Paul Herzel. Headquarters: 61 Cliff St., New York, New York.

**SOCIALIST PARTY.** Worked on "Operation Socialism" campaign to build one hundred new branches and gain thousands of new members. The party stressed the drive for Socialist unity, the building of a new mass party of labor and farmers, the abolition of the military use of atomic energy and the socialization of the industrial use of atomic energy, the need for an international agreement on national disarmament and the ending of all imperialism and totalitarianism as steps to a democratic world government.

Harry Fleischman, 303 Fourth Ave., New York 10, New York, National Secretary; Norman Thomas, Chairman National Action Committee; and William Becker, Labor Secretary.

**SOCIAL SECURITY ADMINISTRATION.** Both administrative and legislative developments in 1946 in the United States affected provisions for social insurance, assistance, and welfare services. Under the President's reorganization plan, effective July 16,

the three-member Social Security Board established by the Social Security Act in 1935 was abolished and most of its functions were transferred to the Social Security Administration. Set up as one of four major units of the Federal Security Agency, the Social Security Administration includes the three Bureaus formerly within the Social Security Board, which are concerned with old-age and survivors insurance, unemployment insurance, and public assistance, and also the Children's Bureau, which was transferred from the Department of Labor with all functions except those related to child labor. Besides its Federal functions in connection with social insurance, assistance, and welfare programs under the Social Security Act, the Administration also carries responsibilities for certain war emergency programs providing benefits, assistance, and maternity and infant care.

In 1946, for the first time since 1939, all existing programs under the Social Security Act were amended; some of the changes were minor technical amendments and some established temporary programs. The amendments, enacted in the closing days of the 79th Congress, followed public hearings by the House Committee on Ways and Means on proposals for changes in the provisions for old-age and survivors insurance, unemployment insurance, and public assistance. At the hearings, which were preceded by a report, *Issues in Social Security*, released in January by the Committee's technical staff, the Committee heard testimony from representatives of employer organizations, labor groups, State employment security and public welfare agencies, and many other groups. The Committee's report, which accompanied a bill introduced in the House on June 28, explained that the proposed amendments were limited in scope, because of the short time remaining for Congressional consideration and enactment of basic changes. A Senate amendment to the House bill added special Federal grants-in-aid for public assistance to low-income States, but this provision and others proposed by the Senate Finance Committee were removed by House and Senate conferees on August 1. The Social Security Amendments of 1946 became law on August 10. The Senate, on the day it passed the amendments, directed its Finance Committee to investigate all phases of the social security program, and to appoint an advisory council to aid in exploring the subject.

In line with its Congressional mandate in the 1935 Social Security Act, recommendations for improving the scope and adequacy of the programs for which the Social Security Administration carries Federal responsibility are presented to Congress in annual reports. The monthly *Social Security Bulletin* and its annual supplement, the *Social Security Yearbook*, present data on the operation of those and related programs.

**Old-age and Survivors Insurance.** Throughout the period since January 1, 1940, when monthly benefits became payable, jobs—which constitute the main source of economic security—have been plentiful. Among the 1,500,000 workers aged 65 and over who were fully insured on June 30, 1946, under this Federal program for industrial and commercial workers, only about 630,000 were receiving retirement benefits, an additional 100,000 had their benefits withheld, mainly because they were working in covered employment. In addition, many thousands of persons eligible for benefits based on a retired or deceased worker's wage record had postponed filing claims or were temporarily not receiving benefit payments because of income from covered occupations.

The number of persons receiving benefits almost doubled from December 1940 to December 1941, but the rate of increase in the rolls slowed in the defense and war periods. Although the increase was accelerated after the Japanese capitulation, the program served not so much as a stimulus to retirement as a resource for aged persons who could not hold or find jobs in covered employment and for widows of deceased workers and their young children who were not in the labor force.

From January 1937, when wage credits under this program first began to accumulate, to the beginning of 1946, some 41,500,000 living workers had acquired insured status. About 31,700,000 workers, on the other hand, had entered covered employment too recently to become insured or had had such frequent or long gaps between covered jobs that they had failed to gain or had lost insured status. Many of the latter were servicemen, who because of their service to the Nation did not earn the wage credits they might otherwise have had in covered employment. Under the Social Security Act Amendments of 1946, however, their survivor's insurance protection will be maintained for a few years, while they are acquiring or reacquiring wage credits in employments under the program. The survivor benefits will be payable to survivors of any World War II veteran with the qualifying military service who dies or has died within three years of his separation from the service, provided the survivors receive no survivor benefits under the programs of the Veterans Administration.

In addition, the 1946 amendments continue the employer and employee contribution rate under this program at 1 percent each through 1947 and remove some of the anomalies, inequities, and administrative complexities that have been revealed during the program's operation.

In the calendar year 1945, about 46,400,000 workers earned old-age and survivors insurance wage credits in employment with 2,610,000 employers. Workers and employers contributed \$1,238,000,000 in the fiscal year 1945-46 toward financing the program. The assets of the old-age and survivors insurance trust fund amounted to \$7,641,000,000 at the end of June 1946.

At that time, 1½ million beneficiaries were receiving monthly benefits, totaling \$28,000,000 a MONTHLY BENEFITS FOR FAMILIES IN RECEIPT OF BENEFITS UNDER FEDERAL OLD-AGE AND SURVIVORS INSURANCE PROGRAM AS OF JUNE 30, 1946

month. Of the 630,000 retired workers receiving benefits, almost a third had aged wives drawing supplementary wife's benefits, at an average payment of \$38.80 a month for a couple. The 110,000 aged widows of deceased insured workers received an average of \$20.20 a month, and the 129,000 younger widows with approximately 202,000 child beneficiaries in their care received monthly amounts ranging from \$34.20 per family for a widow with one child beneficiary to \$51 for a widow and three or more children. For an additional 113,000 families, in which 214,000 children were the only family members receiving benefits, the average monthly payment was \$22.90. Parents' benefits go chiefly to dependent parents of deceased insured women, for if an insured man is survived by a widow or young unmarried child immediately or potentially eligible for monthly benefits, no monthly benefits are payable to his dependent parents.

The total amount paid in benefits during the fiscal year 1945-46 was \$337,100,000, including \$26,000,000 in lump-sum death payments. Since industrial and commercial employment is not distributed uniformly throughout the United States, approximately three-fifths of the total amount paid in the year went to residents of eight States (California, Illinois, Massachusetts, Michigan, New Jersey, New York, Pennsylvania, and Ohio) which accounted for three-fifths of the workers with 1945 wage credits but less than half the population. Because the program does not cover agriculture or self-employment, relatively few families of rural workers can become entitled to benefits.

**Unemployment Insurance.** Although unemployment in the fiscal year 1945-46 remained well below even the most conservative advance estimates, there was considerable labor turn-over as war plants shut down and demobilized servicemen and unemployed workers awaited the resumption of peacetime production. In the 12-month period, about 8,500,000 workers filed claims for unemployment benefits under State laws. About two-fifths did not receive benefits, however, because they were re-employed before the end of the waiting period required under all State laws except Maryland's, lacked the necessary wage or employment qualifications for benefits, or were disqualified from benefits by the provisions of State laws. The \$1,091,000,000 paid in benefits under the State laws in the fiscal year compensated for nearly 58,700,000 man-weeks of unemployment.

Benefits for total unemployment averaged \$18.81 a week for the country as a whole, but the averages ranged widely among the States—from \$12.31 in North Carolina to \$23.60 in Utah, where the benefit scale is adjusted to the cost-of-living index. Only 6 States paid an average of \$20 or more, and 14 paid less than \$15 a week.

The average duration of benefits for unemployment was 11.2 weeks as compared with 9.9 weeks in the fiscal year 1941-42, when industry was converting to war production. Anticipating postwar unemployment, many States increased the maximum potential duration of benefits under their laws, with the result that, by the end of September 1945, half of the workers covered by these laws were in the 12 States which allowed benefits to be drawn for more than 20 weeks by workers who had sufficient wage credits and were unemployed that long. Maximum weekly benefits also were higher in 1945-46 than in 1941-42; moreover, because of the high wages and regular employment of the war years, many beneficiaries were entitled to the maximum weekly amounts that their State law permitted. The value of these benefits to the

workers' families and their communities cannot be overestimated, they facilitated the reopening of industrial plants with many of the workers who had acquired wartime skills in the same or related processes, and helped to prevent mass migration of workers in search of jobs.

In the calendar year 1945, about 42,500,000 workers had wage credits under State laws. Contributions collected under these laws in the fiscal year totaled \$1,009,000,000, or 19 percent less than in the preceding fiscal year, partly because fewer workers were in covered employment but mainly because the favorable employment records of the war years had enabled most employers in the 45 States with experience rating to qualify for reductions in their contribution rates. States had an aggregate of \$6,732,400,000 available for benefit payments at the end of June.

In January-March 1946, 30 States paid more in benefits than they received in contributions and had to draw on their reserves to meet their benefit obligations, and, for the fiscal year as a whole, benefit disbursements exceeded contributions in 16 States. In 1943-44, Federal interest on reserves in State accounts in the unemployment fund was ample to pay benefit payments in all but 4 States.

A Federal program for veterans' readjustment allowances under the GI Bill of Rights is administered by State employment security agencies with Federal funds. In the fiscal year 1945-46 \$908,132,000 was paid to the demobilized servicemen who drew unemployment allowances under this program; this figure includes allowances paid in Puerto Rico.

The 1946 amendments to the Social Security Act authorized establishment of a somewhat similar temporary program of reconversion benefits for seamen who were technically Federal employees because they were employed by agents of the War Shipping Administration; no funds were appropriated, however, to start the program. The amendments also authorized States to cover private maritime workers under their unemployment insurance programs. Under another provision, the nine States that had deposited employee contributions toward unemployment insurance in their accounts in the unemployment trust fund are permitted to use the money to pay disability benefits; two States already have such disability insurance programs.

\* Fiscal years ended June 30. <sup>b</sup> State distribution estimated. <sup>c</sup> Fiscal-year totals represent payments under 1935 act and 1939 amendments. State distribution excludes payments under 1935 act. <sup>d</sup> January-June 1940, since monthly benefits not payable before 1940. <sup>e</sup> No plan in operation. <sup>f</sup> No plan in operation under the Social Security Act.

**Public Assistance.** The close relationship between public assistance and the labor market was as apparent in 1946 as in the early years of the war. When the armed forces were building up to their peaks and critical labor shortages were evident in nearly all parts of the country, the public assistance rolls declined to low levels, and the number of persons who left the rolls exceeded the number of applicants accepted for aid. The drop in the rolls was especially significant, since liberalizations in eligibility requirements in many States would have been expected to result in increases.

The persons who left the rolls because of employment and earnings represented, for the most part, marginal workers—some of them aged and blind persons and children. Employment of these

persons would have been possible only in a period of extreme labor stringency, and they were among the first to lose their jobs when employment opportunities began to dwindle. These marginal workers, moreover, were unlikely to have acquired any substantial rights under State unemployment insurance programs or old-age and survivors insurance, either because their jobs were in noncovered employments or because their earnings were intermittent or meager.

Shortly after victory in the Pacific, the number of cases added to the rolls of each public assistance program began to exceed the number of cases closed. In January-March 1946, State public assistance agencies received more than twice as many applications for general assistance and aid to de-

\* Excludes Federal work programs. <sup>b</sup> Beneficiaries represent persons receiving monthly benefits, exclude persons receiving lump-sum payments only. Payments include lump-sum death payments. <sup>c</sup> Data estimated; for 1946, not available. <sup>d</sup> Average weekly number. <sup>e</sup> Number not available. Payments primarily for calendar year; partly estimated, for 1946, not available. <sup>f</sup> Average number of persons receiving benefits for unemployment in a 14-day registration period. <sup>g</sup> Under Servicemen's Readjustment Act of 1944, effective September 1944. Average weekly number for unemployment and number during month for self-employment. <sup>h</sup> Data through 1942 for continental United States only. <sup>i</sup> Partly estimated.

pendent children as in the first quarter of 1945, and in old-age assistance and aid to the blind the increase was about two-thirds. In June 1946, recipient rolls were at the highest levels on record in 10 States for aid to dependent children and aid to the blind and in 9 for old-age assistance, although, for the country as a whole, none of the programs had reached its prewar peak.

Some States found it impossible to make needed increases in individual payments and add eligible applicants to the rolls. As a result, the range among the States in average payments for June 1946 was wider than it had been a year earlier.

In the country as a whole, one out of every five aged persons in the population in June 1946 was a recipient of old-age assistance. In some industrial States, such as Connecticut, Delaware, New York, and New Jersey, however, the ratio was less than one in ten. The concentration of covered employment in industrial States and in metropolitan areas means that relatively few persons in rural States and areas can qualify for old-age retirement ben-

efits under Federal old-age and survivors insurance, and opportunities for acquiring old-age protection under other insurance programs are meager. It is therefore not surprising that rural areas have relatively more aged recipients of assistance than do urban areas, in terms of population. Before the Social Security Act made Federal funds available to States to share the costs of assistance to needy aged and blind persons and young children deprived of parental support or care, State and local funds for public assistance were concentrated mainly in metropolitan areas, as is the case in some States for general assistance, which is financed without Federal aid.

In June 1946, nearly 2 percent of the children in the United States under age 18 were receiving aid to dependent children, but in 7 States the recipient rates were 1 percent or less and 4 States had rates of 3 percent or more. In many metropolitan counties, the number of widows with young children on the survivor beneficiary rolls of old-age and survivor insurance exceeded the number of

such families receiving aid to dependent children.

In aid to the blind, the 47 States using Federal funds for this program in June 1946 aided about one-third the estimated blind population in those States. Three States aided less than one-tenth, while nine States aided more than half. Three of the 51 jurisdictions (Missouri, Nevada, and Pennsylvania) administer aid to the blind without Federal funds, and Alaska has no separate assistance program for the needy blind. While insurance will gradually replace assistance for many aged persons, as the old-age and survivors insurance program matures and wage earners have a longer period in which to acquire insured status, there is less chance of a change in the relative roles of old-age and survivors insurance and aid to the blind, in the absence of provisions in the insurance program to compensate for disabilities before age 65.

The case load in general assistance, financed by States and localities, increased one-fifth from June 1945 to June 1946, though in some States the increase was as much as one-half and in others the rolls declined. The load was relatively greater in cities than in rural areas; 19 metropolitan areas, with about one-fifth of the total population, had about one-third of the entire case load of the country in June 1946.

In the fiscal year 1945-46, payments for public assistance to needy persons totaled \$1,064,000,000 under the Federal-State programs established by the Social Security Act and State and local programs. Old-age assistance accounted for seven-tenths of this total. Federal grants to States for the period amounted to nearly \$439,000,000, of which more than three-fourths was for old-age assistance.

In June 1946, States had 2,108,000 recipients of old-age assistance on their rolls; 799,000 children in 311,000 families received aid to dependent children; nearly 74,000 blind persons received aid to the blind; and 278,000 households or individuals received general assistance. The average payment in that month was \$31.48 for old-age assistance, with a range from \$11.79 in Kentucky to \$53.53 in the State of Washington. Average payments, per family, for aid to dependent children ranged from \$21.37 in Kentucky to \$99.28 in Washington, while the average for the United States was \$53.70. Washington also had the highest average for aid to the blind—\$59.61—and Kentucky had the lowest—\$13.34; the average for all States was \$34.05. In general assistance, the Nation-wide average was

\$32.66 per case, and the State averages ranged from \$9.32 in Mississippi to \$52.24 in Washington.

An average assistance payment for a State covers, of course, wide ranges in individual payments—from those which represent the maximum permitted by the State law to a few dollars a month needed to supplement a recipient's resources. Some recipients need expensive medical care, some are entirely helpless, and others cannot quite make ends meet. The record shows, however, that some States with limited financial resources give far less than recipients need, as determined by the State's own standards.

The Social Security Act Amendments of 1946 provide for an increase in the Federal share of payments for old-age assistance, aid to dependent children, and aid to the blind for a 15-month period beginning with October 1946. This change will help States make higher payments to recipients to offset, at least in part, the rise in living costs.

**Children's Bureau Programs.** The Nation's continuing fight to reduce infant and maternal mortality is showing good results. The 1945 provisional infant mortality rate of 38.1 per 1,000 live births was a new low, 4.3 percent under 1944 final rate of 39.8. The maternal mortality rate for 1945 apparently will be even lower than the 1944 record of 22.8 per 10,000 live births. The provisional birth rate for 1945, however, was 19.8 per 1,000 population as compared with 20.2 in 1944, showing a continued decline from the peak of 21.5 reached in 1943.

Despite the progress made, there are still in every State needless deaths associated with maternity. In preventing deaths among infants born prematurely there is special opportunity for continued reduction in infant mortality. The American Academy of Pediatrics continued its survey of child-health services throughout the United States in 1946, with the cooperation of the Bureau and the U.S. Public Health Service; by the latter part of the year, data were being gathered in 39 States.

In the social service field, the Bureau carried on its efforts to bring improvement in detention care of children and in foster-home care. Long waiting lists of children needing placement attest the need for suitable foster homes. Cutting off in February 1946 of Federal funds for day-care centers for children of wage-earning mothers created a disturbing situation for many communities. The Bureau advised State and local agencies in their efforts to find ways to continue these services. The Bureau also shared in planning services for children in other countries who are of special concern to Americans. These include children born out of wedlock to men of our armed forces and to other Americans abroad, servicemen's foreign-born children sent to this country unaccompanied by a relative, and children brought here for placement. Under the President's directive of December 1945 to facilitate admission to this country of eligible persons displaced by the war, with emphasis on children, plans were developed for bringing children to this country for care. The Bureau set up standards and, with State departments of public welfare, designated agencies to give care and service. *The Child*, monthly magazine of the Bureau, devoted its July 1946 issue to Europe's displaced children.

In the field of child labor, the Bureau's research, promotion of good labor standards, and child labor administration shifted from wartime problems to those of postwar adjustment affecting the education and employment of youth. Estimates in April 1946 showed somewhat less than 2½ million boys

1946 . . . . .	23,500,000	45.5	40.8	13.7

\* Excludes Federal administrative expenses. Fiscal years ended June 30.

and girls 14-17 years of age at work in full-time or part-time jobs. Under the Fair Labor Standards Act, age or employment certificates under State laws in 44 States, the District of Columbia, Hawaii, and Puerto Rico were accepted as proof of age, and in 4 States Federal certificates were issued by the Bureau.

When the Children's Bureau was transferred to the Federal Security Agency, the Bureau's child labor functions remained in the Department of Labor. During the last half of 1946, the Child Labor and Youth Employment Branch of the Division of Labor Standards carried on the administration of the Federal child labor regulations.

Federal grants-in-aid to States through the Children's Bureau during the fiscal year ended June 30, 1946, were as follows:

Maternal and child health services .....	\$ 5,935,000
Services for crippled children .....	4,059,000
Child-welfare services .....	1,278,000
Emergency maternity and infant care .....	38,050,000

These programs were in operation in all 48 States, the District of Columbia, Alaska, Hawaii, and Puerto Rico. Under the emergency maternity and infant care program, care was authorized for 385,000 wives and babies of servicemen during the fiscal year. The Social Security Act Amendments of 1946 increased the annual amounts authorized for programs administered by the Bureau and made the Virgin Islands eligible for grants on January 1, 1947. The amounts were increased from \$5,820,000 to \$11,000,000 for maternal and child health services, from \$3,870,000 to \$7,500,000 for services for crippled children, and from \$1,510,000 to \$3,500,000 for child-welfare services.

State health departments are placing greater emphasis on special training for better care of the newborn, improvement of health services for school-age children, development of mental health programs, consultation service to hospitals, and expansion of nutrition services. Postwar improvement of services for crippled children has begun, as professional personnel have returned from war duty. The number of children on State crippled children's registers at the beginning of 1946 was 404,500, an increase of nearly 23,000 over the preceding year's total. Three more States have initiated services for children with rheumatic fever, bringing to 20 the number providing this type of care.

During the year the Bureau sent staff consultants on child health and welfare to 13 of the other American republics, and received visitors from some 30 countries for training, study, or information. The fourth annual Border Health Conference, in El Paso, Texas, and Ciudad Juarez, Mexico, April 29-May 1, took up problems of maternal and child health. Translations into Spanish of the new editions of the Bureau's handbooks for parents have been made under the auspices of the American International Association for the Protection of Childhood.

As recommended by the National Commission on Children in Wartime at its final meeting in February 1946, a new National Commission on Children and Youth has been formed to give continuing leadership to Nation-wide efforts to extend and improve opportunities for children and youth.

ARTHUR J. ALTMAYER.

**SOCIETIES AND ASSOCIATIONS.** The following is a list of some of the leading national and international organizations, with a concise report of their activities during 1946. The organizations are listed alphabetically according to the first specific word

in each title. Certain classifications have been omitted in this list because they are presented elsewhere in this volume. The reader is, therefore, referred to the following articles as a supplement: for accrediting associations, to the article on **UNIVERSITIES AND COLLEGES**; for labor organizations, to **LABOR CONDITIONS**; for religious bodies, to the interdenominational groups below, and to the separate articles on churches; for sports organizations, to articles on various sports and *Amateur Athletic Union*, below. For foundations and trusts, government agencies, learned academies, and institutes, see separate articles. For official international organizations, see **PAN AMERICAN ACTIVITIES** and **UNITED NATIONS**, as well as various separate articles.

**Actor's Fund of America**, founded in 1882 to care for the impoverished, aged, and infirm members of the theatrical profession. Membership, 1946: 2,696. President: Walter Vincent. Secretary: Robert Campbell. Headquarters: 1619 Broadway, New York 19, New York. The Fund, supported by donations, benefit performances, and a limited endowment, spends from \$140,000 to \$180,000 a year. A home for retired actors is maintained in Englewood, New Jersey.

**Adult Education, American Association for**, founded in 1926 to serve as a clearinghouse for information, initiate activities, and assist enterprises already in operation, and to aid and advise individuals who, although occupied with some vocation or interest, desire to continue their education. Membership 2,850. President Alain Locke. Director Morse A. Cartwright. Headquarters. 525 West 120 Street, New York 27, New York.

**Advancement of Colored People, National Association for**, was founded in 1909 to combat the spirit of unfairness which confronted colored people in the United States, safeguard their rights, and secure for them equal opportunity with all other citizens. Membership 600,000. President Arthur B. Spingarn. Executive Secretary: Walter White. Headquarters 20 West 40th St., New York 18, New York. The Spingarn medal, an award to "pre-eminent pioneers of a people fighting for its rights on the frontier of intolerance and bigotry," was awarded in June, 1946, to Mr. Thurgood Marshall, characterized "For his distinguished service, during 1945, as a lawyer before the Supreme Court of the United States and inferior courts, particularly in the Texas Primary Case which conceivably may have more far reaching influence than any other act in the ending of disfranchisement based upon race or color in the country, also in recognition of the unselfishness and courage which he has shown not only in this but in other cases for the right of Negroes to belong to trade unions, in his attack upon the Jim Crow travel system and unequal educational opportunities, and for basic human rights and justice in the courts."

**Advancement of Music, National Bureau for**, founded in 1916 to promote musical interest and activities and to aid those interested in such activities. Membership Anyone contributing \$5 or more. President Howard Braucher. Bureau Director: O. M. Tremaine. Headquarters 315 Fourth Avenue, New York 10, New York. The Bureau co-operates with existing agencies in the field of music and promotes National Music Week (beginning first Sunday in May), now expanded to National and Inter-American Music Week. Has available comprehensive list of publications on many aspects of music including school music, contests and festivals, community music and group instruction in applied music. Merged with the National Recreation Association January, 1943.

**Advancement of Science, American Association for**, founded in 1848, a democratic and representative organization devoted to the whole field of science. Organized in fifteen sections, it has over 29,000 members and 198 associated societies. President Dr. James B. Conant. Administrative Secretary: Dr. F. R. Moulton. Headquarters: 1515 Massachusetts Avenue, N.W., Washington 5, D.C. Publications *A.A.A.S. Bulletin*, *Science*, *The Scientific Monthly*, technical symposia, and nontechnical scientific books. A meeting was held in St. Louis, Mo., March 27-30, 1946, and a large meeting in Boston, Massachusetts, December 28-31, 1946.

**Advancement of Science, British Association for**, founded in York, England, in 1831. President: Sir Henry Dale. Secretary: David N. Lowe. Headquarters: Burlington House, London, W. 1. England. The Association holds Annual Meetings in cities other than London, and meetings of its Division for the Social and International Relations of Science in London, and elsewhere at other times. The Association annually sets aside money for scientific researches. Papers, discussion, and results of research are printed quarterly in "*The Advancement of Science*."

**Aeronautic Association, National (NAA)**, founded in 1905, a non-profit, non-partisan organization representing

the consumer interest in all phases of aviation. Net paid membership: 20,000, with over 200 chapters throughout the United States. President: L. Welch Fogue. Executive Vice President: Lowell H. Swenson. Headquarters: 1025 Connecticut Avenue, N.W., Washington 6, D.C. Outstanding functions, 1946: promotion of airports and airway facilities; encouragement of private flying; sponsorship of the Joint Aviation Users Conferences and the National Aviation Clinic; aviation for public education, model building and flying for youth; development of progressive legislation; fostering of American air supremacy; representing the Federation Aeronautique Internationale in the United States; supervision of aircraft records and performances; awarding of the Robert J. Collier Trophy; United States Wing of the Inter-American Escadrille; publisher of *National Aeronautics*, *Model Aeronautics*, *Airport Digest*, and *FYI*; guidance activity for veterans.

**Aeronautical Sciences Institute of the**, founded October 15, 1932, to advance the sciences applied to aeronautics through the publication of technical papers, the holding of scientific meetings, and other activities contributing to the progress of the aeronautical profession. President: Arthur E. Raymond. Secretary: Robert R. Dexter. Headquarters: 2 East 64th Street, New York 21, New York. Fifteenth Annual Meeting of the Institute is scheduled to take place at the Hotel Astor on January 28, 29, and 30. Mr. Raymond's term as president expires January 80th and officers for 1947 will be announced early in January.

**Aid to France, American** (formerly American Relief for France), established 1944 as a unified organization comprising societies already engaged in French relief, with representation of international organizations whose programs include aid to the French people. It has Local Units in 300 communities, situated in all States of the Union. It sends food, clothing, medical supplies, automotive equipment to France. Its long-term program includes establishment of welfare centers in France, especially in areas devastated during the liberation of France. It solicits gifts in kind as well as money. It is also registration agency for child "adoption" package program. President: John J. McCloy. Chairman of Board: William Phillips. Executive Vice President and Treasurer: Elliott H. Lee. Vice Presidents: Marian A. Dougherty; André Meyer. Secretary: William A. Roseborough. Headquarters: 39 East 36th Street, New York 16, New York. Foreign Office, 20 rue de la Baume, Paris, under the direction of General Harold F. Loomis.

**Alcoholic Foundation, The** (Headquarters for Alcoholics Anonymous) was founded in 1934 for the sole purpose of helping the sick alcoholic recover if he wishes. Membership: 30,000 members in 983 groups throughout the world. Nine Trustees, working without compensation, maintain the General Headquarters. All except office work is carried on through members on a voluntary basis. Headquarters: P.O. Box 459, Grand Central Annex, New York 17, New York. Meetings are held in most of the larger cities and many of the smaller ones, several nights a week. Anyone may obtain the address of the local group in his vicinity by writing to the headquarters of the Foundation.

**Allied Youth, Inc.**, with headquarters in the Allied Youth Building, 1709 M Street, N.W., Washington 6, D.C., is a non-sectarian, non-political movement which functions primarily in the high schools throughout America. Its platform is: "We stand for the liberation through education of the individual and society from the handicaps of beverage alcohol." Its speakers address high school student assemblies, and organize Allied Youth Posts to study the alcohol problem and to promote an alcohol-free social and recreational program. Allied Youth's principal concern is to help youth at the point of personal choice, assisting young men and women in getting the scientific facts about alcohol. One of Allied Youth's outstanding 1946 projects was a national conference at Atlantic City October 18-20 to which selected leaders of recognized standing in alcohol education and related fields were invited for the purpose of planning a large-scale program for getting the facts about alcohol vividly before America's youth through the facilities which Allied Youth makes available. In addition to its service in the field Allied Youth issues a great deal of printed material, including *The Allied Youth*, published monthly except in August, the *Alcoholism Educational Service*, and programs and other material for schools and churches. The Board of Trustees includes prominent educators and civic and religious leaders. Complete information available from W. Roy Breg, Executive Secretary, Allied Youth, Inc., Allied Youth Building, 1709 M Street, N.W., Washington 6, D.C.

**Amateur Athletic Union of the United States (A.A.U.)**, founded in 1888 to improve and promote amateur sports and the civic interest of the nation, by the education of all classes in the benefits to be derived by participation in athletics. The A.A.U. establishes a uniform test of amateur standing and uniform rules governing the sports within its jurisdiction, regulates and awards the athletic championship of the United States, and promotes legislation in the interest of sports facilities. President: Willard N. Greim. Secretary: D. J. Ferris. Headquarters: 283

Broadway, New York 7, New York. For activities and awards during 1946 see the separate articles on the various sports.

**Antiquarian Society, American**, founded in 1812 with the maintenance of a national library of American history as its chief purpose. The library contains nearly 700,000 titles and is free for the use of all qualified scholars. Membership (honorary): 200. President: Samuel Eliot Morison. Director: O. S. Brigham. Librarian: O. K. Shipton. Headquarters: Worcester 5, Mass.

**Anti-Saloon League of America, The**, founded in 1895 to promote temperance education and legislation. During 1945 the League concentrated its efforts upon temperance education in the States and upon the increase in the number of political units voting no-license under local option laws. In the area of Federal action it urged the broad use of the war powers conferred upon the President by the several War Powers Act to prevent the waste of materials and manpower during reconversion following World War II. President: Bishop Ralph S. Cushman; General Superintendent: George W. Orabbe. Headquarters: 181 B Street, S.E., Washington 3, D.C.

**Archaeological Institute of America**, founded in 1879 to promote and direct archaeological investigation and research. Membership: 1,200. President: Sterling Dow. General Secretary: Stephen B. Luce. Headquarters: Harvard Divinity School, Andover Hall, Cambridge 38, Mass.

**Architects, The American Institute of**, founded in 1857 to promote the efficiency of the profession, to advance education in architecture and allied subjects, and to make the profession of increasing service to society. Membership: 6,500. President: James R. Edmunds, Jr. Secretary: Alexander C. Robinson III. Treasurer: Charles F. Celarius. Executive Director: Edward C. Kemper. Headquarters: The Octagon, 1741 New York Avenue, N.W., Washington 6, D.C.

**Army and Navy Union, United States of America**, was founded in 1886 and incorporated in 1888. The purpose and objectives of the Union and the Ladies Auxiliaries are as follows: to advocate a strong national security that all citizens of the United States can live in freedom without fear, to provide for our comrades and shipmates when sick or in need; to extend a helping hand to the families and dependents of a deceased comrade or shipmate, to assist and foster legislation for a strong security that will be beneficial for all citizens as well as for the betterment of conditions in the Armed Forces and for the veterans, widows, orphans and their dependents, to maintain free employment and welfare service. Membership: 280,000. National Commander: William A. Klatt. National Adjutant: Henry W. Gerber. National Headquarters: 10 South Tennessee Avenue, Atlantic City, New Jersey. The free employment and welfare services are maintained at the Department of New York Headquarters: 325 East 88 Street, New York 16, New York. During 1946, the sick and wounded in Government hospitals were visited, given Christmas packages and 1,000 radios; 15 Projection Books were presented to bed-ridden patients in various hospitals; the Unknown Soldier's Tomb and other graves were decorated; and the Memorial Day, Army and Navy Day Parades were presented. National Encampment will be held in the latter part of August, 1947. Department of New York Encampment will be held the latter part of July, 1947.

**Army Relief Society**, founded in 1900, to collect funds and provide relief in case of emergency for dependent widows and orphans of officers and enlisted men of the regular army of the United States. President: Mrs. Arthur W. Page. Treasurer: Mr. Walter G. Kimball. Headquarters: 350 Fifth Avenue, Room 5615, New York 1, New York. During 1946, Branches of the Society were re-established at every Army post throughout the country. Meetings are held, at the headquarters, the second Wednesday of each month.

**Arts, The American Federation of**, founded in 1909 to develop art and its appreciation. Chapter Membership: 451. Honorary President: Hon. Robert Woods Bliss. President: Hudson D. Walker. Director: Thomas C. Parker. Headquarters: Barr Building, Washington 6, D.C.

**Arts and Letters, National Institute of**, founded in 1899 to further the interests of literature and the fine arts. Membership: 250. President: Douglas Moore. Secretary: Henry S. Canby. Headquarters: 633 West 155 Street, New York 82, New York. A Gold Medal was awarded in 1946 to Van Wyck Brooks for Essays and Criticism and "The Institute Award for Distinguished Achievement given to an eminent foreign artist, composer or writer living in America" was presented to Ralph Hodgson for poetry. Scheduled meetings: Public Ceremonial and Exhibition given jointly with the American Academy of Arts and Letters (founded by 50 members of the National Institute—see ARTS AND LETTERS, ACADEMY OF) in May, 1946, at New York City; Annual Dinner-Meeting, December 18, 1946, in New York.

**Asiatic Association, American**, founded in 1898 to study relations between Asiatic countries and the United States. Membership: 200. President: R. M. Field. Secretary:

John B. Chevalier. Headquarters: India House, 1 Hanover Square, New York 4, New York. Annual meetings are held the third Thursday in October at India House.

**Associated Press**, founded in 1900 for the collection of news, photographs, and features. Serves more than 2,500 members and subscribers throughout the world. President: Robert McLean of the *Philadelphia Evening Bulletin*. Secretary: Lloyd Stratton. Headquarters: 50 Rockefeller Plaza, New York 20, New York. Scheduled meeting: April, 1947.

**Astronomical Society, American**, founded in 1899 to advance astronomy and closely related branches of science. Membership: 600. President: Otto Struve. Secretary: C. M. Huffer, Washburn Observatory, University of Wisconsin, Madison 6, Wisconsin. Scheduled meetings: December 27 to 30, 1946, Cambridge, Massachusetts; September 1947, Evanston, Illinois.

**Audubon Society, National**, organized in 1905 to arouse public appreciation of the value of, and recognition of the need of, conservation of wildlife, soil, plants, and water, and the interdependence of these natural resources. Membership: 80,000 individuals and 200 member societies with membership of 60,000 individuals; also, 1,600 non-member contributors. President: John H. Baker. Chairman of the Board of Directors: Ludlow Griscom. Headquarters: 1,000 Fifth Avenue, New York 28, New York. Activities during 1945 included enrollment of children throughout the United States and Canada in 13,636 Audubon Junior Clubs in schools, camps and youth organizations; spring and summer courses in natural history and conservation conducted at the Audubon Nature Center in Greenwich, Connecticut; summer courses in Natural History and Conservation at Audubon Nature Camp, Madomak, Maine, with 250 students; Audubon Wildlife Screen Tours with ten famous nature lectures in forty principal Midwestern cities; Audubon staff lectures addressing 1,000 audiences reaching 350,000 individuals; protective warden service provided for wildlife on some 3,000,000 acres of land and water in Maine, Connecticut, New York, New Jersey, Pennsylvania, Florida, Louisiana, Texas and California.

**Automobile Association, American (A.A.A.)**, founded in 1902 to provide a nation-wide network of service and protection for car-owning members and to work for the improvement of motoring conditions generally. Membership in A.A.A. clubs: Over 1,700,000. President: H. J. Brunner, General Manager, Russell E. Singer; Headquarters: 17th and Pennsylvania Avenue, N.W., Washington 6, D.C. During 1946 one of the first reconversion efforts of the organization was to bring up to date its maps, tour books, and other travel literature. A special corps of road reporters was organized to gather first-hand information on road conditions and to inspect hotels, motor courts, and other accommodations along the major highways of the United States, Canada, and Mexico. Tremendous increase in travel interest was reflected by circulation of A.A.A. travel literature, which totaled some 10,000,000 copies, an increase of fifty percent over the prewar record year. In the field of traffic safety the A.A.A. cooperated with the President's Highway Safety Conference and, as a follow-up campaign, launched a "Take It Easy" program which attracted nation-wide interest. The organization revitalized programs in the interest of behind-the-wheel driver training for high school students and for greater protection of pedestrians. In the international field the A.A.A. sent a full delegation to the meeting of international motor clubs at Paris and led the successful effort to achieve amalgamation of the two big international travel bodies—Association Internationale des Automobile-Clubs Reconnus and Alliance Internationale des Touristes. The organization is taking an active part in activities of the Inter-American Federation of Automobile Clubs, and through a special representative was successful in organizing motor clubs in Central America along the route of the Pan-American Highway, scheduled to be opened in 1948. Its International Travel Division was revived and arrangements already have been completed for the appointment of foreign port agents in major European countries to act in behalf of American motorists traveling abroad. After a wartime lapse automobile racing, under the sanction of the A.A.A. Contest Board, staged a comeback with the heaviest schedule in history. Tentative arrangements are underway for new speed trials on the Bonneville Salt Flats with expectation that the 400-mile an hour mark will be achieved. At the year's end the A.A.A. was concentrating much of its energies on a drive in support of the projected 40,000-mile Interstate Highway System authorized by Congress in 1944; this system is designed to provide a nationally integrated network of high type highways tailored to the needs of modern traffic.

**Automobile Manufacturers Association**, founded in 1913 for service to the motor industry. Membership: 34. President: George W. Mason. Secretary: Marvin E. Coyle. General Manager: George Romney. Headquarters: New Center Building, Detroit 2, Michigan.

**Bacteriologists, Society of American**, founded in 1899 to promote the science of bacteriology and bring together American and other microbiologists for demonstration of

methods and discussion of problems and advances. Membership: about 2,700. President: James Craigie, M.D., University of Toronto. President-elect: Thomas Francis Jr., M.D., University of Michigan. Secretary-Treasurer: Professor Leland W. Parr. Headquarters: School of Medicine, The George Washington University, 1835 H. Street, N.W., Washington 5, D.C. Annual meetings: 1946, Detroit, Michigan, in May; 1947, Philadelphia, Pennsylvania, in May; 1948, Minneapolis, Minnesota. Publications: *Journal of Bacteriology*, *Bacteriological Reviews*, *Monographs of Microbiology*, *News Letter*.

**Bankers Association, American**, founded in 1875 to promote the welfare and usefulness of banks, secure uniformity of action on subjects of importance and provide opportunity for discussion thereon, and to provide educational opportunities for bank officers and employees. Membership: 15,613. President: C. W. Bailey. Headquarters: 12 East 36 Street, New York 16, New York, 719-15 Street, N.W., Washington 5, D.C., 105 W. Adams Street, Chicago 8, Illinois.

**Banking, American Institute of**, founded in 1900 to further the education of bankers in the theory and practice of banking and in those principles of law and economics that pertain to the banking business and to establish and maintain a recognized standard of banking education by means of official examinations and the issuance of certificates of graduation. Membership about 70,000. Secretary: Floyd W. Larson. Headquarters: 12 East 36 Street, New York 16, New York.

**Bar Association, American**, founded in 1878 to advance the science of jurisprudence, promote the administration of justice and uniformity of legislation and judicial decision, uphold the honor of the profession, encourage cordial intercourse among members of the Bar, and correlate activities of State Bar Associations. Membership: 38,000. President: Carl Rex Executive Secretary: Olive G. Ricker. Headquarters: 1140 North Dearborn Street, Chicago 10, Illinois. In 1946 the Ross Essay Prize was awarded to Eugene C. Gearhart, Binghamton, New York. See LAW.

**Bible Society, American**, founded in 1816 to encourage wider circulation of the Holy Scriptures without note or comment throughout the world. Membership: probably over 15,000. President: Daniel Burke, LL.D.; General Secretaries: Dr. Eric M. North, Mr. Frank H. Mann, Mr. Rome A. Betts, Dr. F. W. Cropp, Dr. Robert T. Taylor. Treasurer: Rev. Gilbert Darlington. Headquarters: Park Avenue and 57 Street, New York 22, New York. Universal Bible Sunday will be observed December 14, 1947. The 1947 annual meeting will be held May 8.

**Bibliographical Society of America**, founded in 1904 to promote bibliographical research and issue publications. Membership 1,200. President: William A. Jackson. Permanent Secretary: Nelson W. McCombs, 100 Washington Square, New York 3, N.Y. Mailing Address: P.O. Box 397, Grand Central Annex, New York 17, N.Y.

**Blind, Inc., American Foundation for the**, founded in 1921 to promote those interests of the blind which cannot be advantageously handled by local agencies. President: William Ziegler, Jr. Executive Director: Robert B. Irwin. Headquarters: 15 West 16 Street, New York 11, New York. Activities include research, assistance and consultation service to local agencies, special services to individuals, scholarships, a reference and lending library, and manufacture of Talking Books for the blind.

**B'nai B'rith (Sons of the Covenant)**, oldest Jewish service organization, founded in 1843 to further the unity of the Jewish people and to serve humanitarian and community causes through a program encompassing youth welfare, education, community and social service, interfaith understanding, defense of Jewish rights, philanthropy, Americanism. Membership: 270,000. President: Henry Monksy. Secretary: Maurice Bilsger. Headquarters: 1008 K Street, N.W., Washington 1, D.C. All of B'nai B'rith's long-time agencies for service—Hillel Foundations, B'nai B'rith Youth Organizations, Anti-Defamation League, Americanism Department and Vocational Service Bureau—were re-tooled for postwar service. On behalf of its members abroad who survived the Nazi terror B'nai B'rith instituted an "adopt-a-family-abroad" program, which resulted in material assistance to over 4,000 needy families. B'nai B'rith became the first civilian organization to receive special citations from the Navy (awarded by Rear Admiral Forrest P. Sherman) and the Army (awarded by General Dwight D. Eisenhower) for "meritorious contribution" to the war effort. President Truman received a B'nai B'rith delegation at the White House and lauded the Order's war service record. Secretary of War Robert P. Patterson praised the work of B'nai B'rith Women. A plaque was presented to Gen. Omar N. Bradley, pledging continuation of the service program for veterans. The annual meeting of the national executive committee approved the establishment of a membership department, and subsequently also, a national veterans' advisory committee was created. All B'nai B'rith districts—seven in number—comprising the United States and Canada, held their first postwar conventions in the summer of 1946.

**Booksellers Association, American**, founded in 1900 as a trade organization of the retail booksellers of the United States. Its purposes are: to establish and maintain favorable trade conditions; to eliminate unfair competition and price cutting; to work for sound publisher-bookseller relations; to maintain a careful watch on legislation affecting the booksellers' interests; to sponsor promotional campaigns to increase the sale of books; to simplify the daily operational problems of booksellers by providing valuable time and labor-saving services to members. President: George A. Hecht First Vice President: Otto Grauer Second Vice President: Lovick Pierce Third Vice President: Robert Campbell Secretary: Henriette Walter Treasurer: Carol Fleming. Headquarters: 85 East 20th Street, New York 3, New York.

**Botanical Society of America, Inc.**, established in 1906 as a clearinghouse for the botanists of America. It supports projects of general interest to botanists, provides an opportunity for the presentation and publication of research studies, and accepts and administers funds for certain purposes. The Society held its annual meeting in conjunction with the A.A.A.S. at Boston, Massachusetts, December 26-31, 1946. The official publication is *The American Journal of Botany*. Membership: 1,400. President: Nell E. Stevens Secretary: John S. Karling, Department of Botany, Columbia University, New York 27, New York.

**Boys' Clubs of America, Inc.**, a national organization of Boys' Clubs for the development of boys physically, in vocational skills, and character. Membership 260 member organizations with over 250,000 boy members. Chairman of Board: Herbert Hoover. President: William Edwin Hall Executive Director: David W. Armstrong. Headquarters 381 Fourth Avenue, New York 16, New York. Boys' Clubs of America's plans include strengthening of local Clubs, training courses for present and prospective workers, and expansion of the movement to additional communities and areas in industrial cities.

**Boy Scouts of America**, founded in 1910 to promote the ability of boys to do things for themselves and others, to train them in Scoutcraft, and to teach them patriotism, courage, self-reliance, and kindred virtues. Membership (October 31, 1946) 1,961,146. President: Amory Houghton Chief Scout Executive: Elbert K. Fretwell, Chief Scout. James E. West Headquarters 2 Park Avenue, New York 16, New York. The theme for 1946, "Scouts of the World, Building Together"; and emphasized help to Scouts in the war-torn countries. Through the World Friendship Fund, to which Scouts voluntarily contributed, books, badges, and equipment were sent abroad. Through the "Shirts Off Our Backs Campaign" Scouts sent uniforms and equipment overseas. Thousands of Scouts earned the General MacArthur Medal for gardening and food projects. New Scout Councils were established in Alaska and Guam. Philmont Scout Ranch provided adventure to Scout Troops visiting from all parts of the United States. Pilgrimages to historical shrines were featured by many Troops. In the Fall a big Scout Round-up brought Scouting to an increasing number of boys. A World Jamboree is scheduled for 1947 in France.

**Broadcasters, National Association of**, founded in 1922 to foster and promote the development of the art of radio broadcasting; to protect its members in every lawful and proper manner from injustices and unjust exactions; to foster, encourage and promote laws, rules, regulations, customs and practices which will be for the best interest of the public and the radio industry. Membership 870. President: Justin Miller Executive Vice President: A. D. Willard, Jr. Secretary Treasurer: C. E. Arney, Jr. Headquarters: 1760 N Street, N.W., Washington 6, D.C.

**Business and Professional Women's Clubs, Inc., The National Federation of**, founded in 1919 to bring about the spirit of cooperation among business and professional women of the United States and to extend their opportunities and their sense of responsibility for social and economic conditions. Membership over 102,000. President: Sally Butler Executive Secretary: Olive H. Huston Headquarters: 1819 Broadway, New York 23, New York. The Federation's program for the year beginning July, 1946, with its goals, Jobs, Justice, Peace, is a program of action for women who work. It is focused on women's responsibilities in politics; in economic development for jobs, in employer-employee relations; and toward a world of justice and order.

**Camp Fire Girls, Inc.**, oldest national organization in America serving girls between the ages of seven and eighteen, has as its primary purpose "to perpetuate the spiritual ideals of the home" and "to stimulate and aid in the formation of habits making for health and character. Wealthy and underprivileged children alike, over 380,000, regardless of race, color or creed, enjoy its leisure-time program. The organization received its charter in the Nation's Capital in 1912, and since that time has pioneered in the development of character and health-building programs. Through its Seven Crafts—Home Craft, Outdoors Craft, Creative Arts Craft, Frontiers Craft, Sports and Games Craft, Business Craft and Frontiers Craft—girls "learn by doing." During 1946, Camp

Fire Girls special citizenship project, "At Home in the World," promoted world friendship. The girls exchanged correspondence with thousands of "pen pals" in all quarters of the globe, and also sent them scrapbooks containing pictures of themselves as well as activity shots describing American ways and customs. In line with this feeling of world neighborliness, Camp Fire Girls have aided children of liberated countries in many ways, by sending thousands of boxes of food, clothing and toys, thus rebuilding faith in human nature and establishing strong bonds of friendship. Camp Fire was one of the seventeen youth-serving agencies participating in YOUTH UNITED—FOR FAMINE RELIEF. (sponsored by the National Social Welfare Assembly). Members pledged themselves to food conservation in order to lessen the toll of starvation abroad. Governing themselves by these Laws: Worship God, Seek Beauty, Give Service, Pursue Knowledge, Be Trustworthy, Hold on to Health, Glorify Work, Be Happy, Camp Fire Girls learn early in life that the third law is an important part of the new frontier, human relations, and it will aid them in becoming better citizens of their own country and of the world. President: Dr. Bernice Baxter. National Director: Miss Martha F. Allen. Headquarters: 88 Lexington Avenue, New York 16, New York.

**Cancer Society, Inc., American** (before 1944, The American Society for the Control of Cancer) was founded in 1913 to control cancer through a program of education, service, and research. There are divisional geographic organizations in all forty-eight states. Executive Vice-President: J. Douglass Poteat Medical and Scientific Director: Ashley W. Oughterson, M.D. The Society is supported by voluntary contributions made during April of each year and, in addition, by gifts, bequests and trusts.

**Canners Association, National**, founded in 1907, to improve the quality of canned foods through promotion of research in the technology of canning, and thus encourage the public acceptance of canned foods. Membership: over 1,000. President: Fred A. Stare First Vice-President: Emil Rutz Second Vice-President: Alfred W. Eames Secretary: Carlos Campbell Treasurer: Frank E. Gorrell Headquarters: 1739 H Street, N.W., Washington 6, D.C. The Association received, on January 19, 1946, the U.S. Navy Certificate of Achievement for meritorious contribution to the war effort and commendation from Army Quartermaster Corps for work with the Army during the war, and, September 21, 1946, received the Aluminum Award from the U.S. Treasury Department for assistance in sales of war bonds. The Annual Convention will be held January 19-24, 1947, at Atlantic City, New Jersey.

**Care of European Children, Inc., United States Committee for**, organized 1940 to provide haven and care in America for the babies and children of the bombed areas of the British Isles and Europe. In 1946 it became sole American agency sponsoring war-orphaned children of Europe coming to America under new Government directive reviving quota immigration. It provides trans-Atlantic transportation, rehabilitation and clothing for immigrant war orphans and places them in American foster homes. It is a voluntary organization formerly an active agency of the National War Fund, but now depending on its own solicitation for the monies necessary for its work. Honorary President: Mrs. Franklin D. Roosevelt. President: Marshall Field, Acting Director: Miss M. Ingeborg Olsen Secretary: Miss Agnes King Inglis Acting Treasurer: Maxwell Hahn Committee Headquarters: 215 Fourth Avenue, New York 3, New York. Fund Campaign Headquarters: 140 Cedar Street, New York 6, New York.

**Central Location Index, Inc.** was founded on May 27, 1944, to assist individuals in the Western Hemisphere in locating their displaced relatives (Allied Nationals) abroad; and to assist such displaced persons abroad in locating their relatives and friends in the Western Hemisphere. This work is done through the following ten member agencies of the Index: The American Christian Committee for Refugees, Inc.; American Friends Service Committee; The American Jewish Joint Distribution Committee, Inc. (This is the only member agency that does not accept application for location service); Hebrew Sheltering and Immigrant Aid Society; International Migration Service; United Service for New Americans; The Unitarian Service Committee; International Rescue and Relief Committee; Canadian Location Service, and American Federation of International Institutes. President: Moses A. Leavitt. Vice-President: Ruth Larned. Treasurer: Isaac L. Asofsky. Secretary: Mrs. Kathleen Hanstein. Executive Director: Carolyn A. Flexner. Headquarters: 165 West 46th Street, New York 19, New York.

**Chamber of Commerce, International**, founded in 1920 to provide business men and organizations with a continuing mechanism for interchange of information, joint study, consultation and periodical conference; an organization for leadership in the field of international economic policy. Its activities, curtailed during the war, again are being expanded to refocus business viewpoints and enable the Chamber to offer full consultative assistance to the Economic and Social Council of the United Nations Or-

ganization and related agencies, in the building of a solid economic base for peace. Membership: National Committees in 31 countries; affiliated organizations in 18. President: Winthrop W. Aldrich of the United States. Chairman of the U. S. Associates, which is the reorganized group that has replaced the old American Section Philip D Reed Executive Director Arvid L. Frank Headquarters of the ICC 38 Cours Albert Premier, Paris Seme, France Main office of the United States Associates 590 Madison Avenue, New York 22, New York Washington office, 1615 H Street, N.W., Washington 6, D C

**Chamber of Commerce of the United States**, established in 1912, primarily as a vehicle for the expression of national business opinion on important economic questions Membership 2,407 chambers of commerce and trade associations, 10,299 individual business men, and 6,450 firms and corporations President William K Jackson, General Manager Ralph Bradford Headquarters 1615 H Street, N.W., Washington 6, D C The Chamber is centering its attention particularly upon postwar economics Chamber spokesmen appeared before congressional committees to present a practical business viewpoint on pending legislation Twelve service departments are maintained covering the main divisions of business activity Publications include the *Nation's Business*, a monthly, *Business Action*, weekly, special legislative bulletins, and committee reports Several special committees, besides the regular departmental committees, were engaged during the year in studies of important problems

**Churches, The World Council of**, established as a provisional committee after the world conferences at Oxford and Edinburgh in 1937 to unite the churches of the world on the federal principle for cooperative service and the promotion of Christian unity Membership 94 denominations in 34 countries Joint Chairmen Dr. Marc Boegner, The Archbishop of Canterbury, Archbishop Erling Eidem, Dr. John R. Mott, Archbishop S. Germanos General Secretary Dr. W. A. Visser 't Hooft, Geneva; Associate General Secretary Dr. Henry Smith Leiper, New York Assistant General Secretary Rev. Oliver S. Tomkins, London Headquarters: 17 Route de Malagnou, Geneva, Switzerland, 297 Fourth Avenue, New York 10, New York; 21 Bloomsbury Street, London, W. C. 1, England The American Section meets in New York, New York, on the first Tuesday in December A Department of Reconstruction and Inter-Church Aid for the churches of Europe has been set up in Geneva A Commission on International Affairs also has been established with offices in London and New York

**Citizens National Committee, Inc.** (formerly Citizens Emergency Committee on Nondefense Expenditures, Inc.), organized in July, 1941, to keep the public informed with respect to legislative proposals and administrative procedures, to assist Congress and other public officials in their effort to advance the economic welfare of the country, and to coordinate the public demand for efficient and adequate but prudent government Chairman T. Jefferson Coolidge Executive Director Kenneth L. Pray Headquarters 2844 Connecticut Ave. N.W., Washington 9, D C

**City Managers' Association, The International**, founded in 1914 to aid in the improvement of local government administration and to increase the proficiency of city managers Membership 1,000. President: V. R. Smitham. Headquarters: 1313 East 60 Street Chicago 37, Illinois. Recent publications include *The Municipal Year Book 1946*, *Governmental Data for Small Council-Manager Cities*, *Planning for Postwar Municipal Services*, and *Monthly Administrative Reports for Cities*. Also publishes *Public Management*, a monthly journal, issues the "Municipal Management Series" consisting of eight practical manuals; and conducts in service training courses and a management information service

**Civil Engineers, American Society of**, founded in November, 1852, for the advancement of the sciences of engineering and architecture in their several branches, the professional improvement of its members, the encouragement of intercourse between men of practical science, and the establishment of a central point of reference and union for its members Membership: 22,000 President Wesley W. Horner Vice Presidents: Ernest E. Howard, Arthur W. Harrington, Gail A. Hathaway, J. T. L. McNew Executive Secretary: William N. Carey, Directors: W. D. Shannon, Frank C. Tolles, S. C. Hollister, R. J. Tipton, W. M. Wilson, R. W. Gamble, R. W. Crum, Howard T. Critchlow, Oscar H. Koch, Thorndike Saville, Charles W.

Bryan, Jr., John H. Gardiner, H. F. Thomson, Shortridge Hardesty, Irving V. A. Huie, Albert Haertlein, William E. Gidden, William M. Piatt, and Frederick W. Panhorst. Headquarters: Engineering Societies Building, 83 West 89th Street, New York 18, New York. Awards during 1946: Norman Medal, Merrill Bernard; J. James R. Croes Medal, George H. Hickox; Thomas Fitch Rowland Prize, Donald N. Becker; James Laurie Prize, Ole Singstad; Rudolph Herring Medal, Langdon Pearse; Karl Emil Hilgard Prize, L. Standish Hall; J. C. Stevens Award, Thomas R. Camp; Alfred Noble Prize, August L. Ahlf; Construction Engineering Prize, C. G. Cappel; Washington Award, Vannevar Bush. Honorary Memberships: Boris A. Bakhtmetoff, Charles F. Kettering, and Charles H. Purcell. The outstanding accomplishments of the Society during 1946: National Engineers Committee Report on Industrial Disarmament of Japan; Survey of Economic Status of the Engineer; numerous Salary Surveys; formation of an Air Transport Division; and active participation in the President's Highway Safety Conference. During 1947, meetings will be held in: New York, New York, January 15-18; Phoenix, Arizona, April 23-26; Duluth, Minnesota, July 15-18; and New Orleans, Louisiana, October 15-18.

**Civil Liberties Union, American**, founded in 1920 to maintain the Bill of Rights for everybody, without exception. Membership: 7,000. Chairman of the National Committee: Prof. Edward A. Ross. Chairman of the Board of Directors: Rev. John Haynes Holmes. Director, Roger N. Baldwin. Headquarters: 170 Fifth Avenue, New York 10, New York. The Union continued during 1946 its intervention in court cases involving civil rights in administrative practices and rulings. Publications included the yearly report, *From War to Peace*, the *Civil Liberties Quarterly*, *Race Practices of National Associations*, *The Case Against Legal Restraints on Racial Libels and Anonymous Publications*, and other pamphlets of current interest in civil liberties.

**Civil Service League, National**, founded in 1881 to improve and extend the merit system in the public service. Membership: 3,000. President: Nicholas Kelley. Executive Secretary: H. Eliot Kaplan. Headquarters: 67 West 44th Street, New York 18, New York. In 1946 the League continued its fight against political interference with appointments in public agencies, urged a return to normal peacetime methods of public personnel management and controls, and elimination of unneeded war-created Federal positions. Its Committee on Public Employer-Employee Relations, composed of prominent representative public administrators, educators, labor leaders and industrialists, after long intensive study, issued a report which received nation-wide public approval. The report has had broad circulation. It surveys administration of merit system laws, practices and procedures, and gives advisory services with respect to problems of administration, interpretation, and enforcement of merit system laws to public personnel agencies and administrative officials.

**Civitan International**, nonprofit association of individual Civitan Clubs, now in its twenty-seventh year, whose purpose is best explained by the motto, "Builders of Good Citizenship." It extends from Canada throughout the United States and to Mexico. Objectives are (1) Building of good citizenship and promotion of international good will; (2) loyal support of our governments in peace and in war; (3) curbing of crime; (4) public safety and accident prevention; (5) fostering of all procedures designed to eliminate communicable diseases and improve the public health; (6) assistance to youth in all ways calculated to reduce juvenile delinquency and to inculcate in them practical incentives to be good citizens; (7) rehabilitation of returning World War II veterans. President J. Edward Bailey, American Building, Richmond, Virginia. President Elect: H. S. Strawn, 133 West 4 Street, Charlotte, North Carolina. Immediate Past President: LeRoy D. Sauer, 42 Main Street, Dayton, Ohio. Vice Presidents: Oby T. Brewer, P. O. Box 1663, Atlanta, Georgia, and Eugene J. Bryan, Hamilton National Bank Building, Chattanooga, Tennessee; Secretary: Rudolph T. Hubbard, 1525-27 Comer Building, Birmingham, Alabama. Treasurer: Marcus Robbins, 119 College Street, New Haven, Connecticut. Judge Advocate: W. C. Warren, % Court-house, Tuscaloosa, Alabama. Sergeant-At-Arms: Bruce Cunningham, Jr., 1915 Wood, Dallas, Texas. Chaplain: Norman L. Brown, 3266 Ingledeale Terrace, Los Angeles, California. Official publication: *The Civitan*, published monthly except in July. Charles I. Reynolds, Editor and *Civitan International*, Headquarters: 1525-27 Comer Building, Birmingham 8, Alabama.

**Common Council for American Unity**, founded in 1919 to continue work begun by the United States Committee on Public Information. It became an independent organization in 1921, and its name was changed from Foreign Language Information Service to Common Council for American Unity in 1940. The purpose of the Council is to help create unity and mutual understanding among the American people; to overcome intolerance and discrimination because of foreign birth or descent, race, or nationality; and to help the foreign-born and their children to

solve their special problems of adjustment. Executive Director: Read Lewis. Headquarters: 20 West 40th Street, New York 18, New York. Publication: *Common Ground*, a quarterly magazine. The Council maintains a weekly education service in nineteen languages to the foreign language press in the United States, and radio stations broadcasting foreign language programs; advises individual immigrants; supplies local agencies with latest information on immigration, naturalization and intercultural problems, follows daily developments in Congress in this field, and takes constructive stands on specific issues of discrimination and fair play; works with government agencies interested in foreign origin groups; publishes magazine dealing with intercultural and interracial problems; serves as center of information and advice about nationality and racial groups and programs to advance better understanding; maintains American Common, an intercultural center; sponsors One World Award.

**Composers, Authors and Publishers, American Society of, (ASCAP)**, was founded in 1914 as a voluntary, nonprofit association of composers and authors of musical works and their publishers. Its chief function is the enforcement of that particular right inherent in musical copyright, which secures to the copyright owner exclusive control of public performance for profit. The Society is a member of the Confédération Internationale des Sociétés d'Auteurs et Compositeurs. Membership over 2,000. President: Deems Taylor. Vice Presidents: Gustave Schirmer and Oscar Hammerstein II. Secretary: George W. Meyer. Treasurer: J. J. Bregman. Assistant Secretary: Donald Grey. Assistant Treasurer: Ray Henderson. General Manager: John G. Paine. General Counsel: Schwartz & Frohlich Board of Directors: Stanley Adams, Fred E. Ahlert, Louis Bernstein, Saul Bornstein, J. J. Bregman, Gene Buck, Frank H. Connor, Paul Cunningham, Max Dreyfus, Donald Gray, Oscar Hammerstein II, Otto A. Harbach, Ray Henderson, John Tasker Howard, A. Walter Kramer, George W. Meyer, Jack Mills, John O'Connor, J. J. Robbins, Richard Rodgers, Lester Santly, Gustave Schirmer, Herman Starr, and Deems Taylor. Headquarters: 30 Rockefeller Plaza, New York 20, New York. Between October 21 and 25, 1946, the Society was host to the Confédération Internationale des Sociétés d'Auteurs et Compositeurs at the Library of Congress, Washington, D. C.

**Composers, Inc., The League of**, founded in 1923 to further the works by living composers of all nationalities, as well as to help composers by commissions for new works and general promotion of their compositions. Executive Chairman: Mrs. Arthur M. Reis. Headquarters: 130 West 56th Street, New York 19, New York. The League publishes a quarterly magazine, *Modern Music*, the only critical magazine in this country devoted to contemporary music. The League of Composers season includes concerts, opera and broadcasts, and commissions new works for other organizations. The League has laid particular emphasis on introducing young modern composers to a New York public, having commissioned seventy American composers during the past years. A group of young composers this season were elected to a Program Committee and will be in charge of the New York concerts. A work commissioned by the League for orchestra and voice has been written by Lucas Foss and will receive its first performance by Serge Koussentsky with Ellabelle Davis, soloist, in 1947.

**Consumer-Retailer Council, Inc., National**, founded in 1937 to enable consumers and retailers to work out together their mutual problems. Members: American Association of University Women, American Home Economics Association; National Board of the Young Women's Christian Associations; American Retail Federation; National Association of Food Chains; National Retail Dry Goods Association; National Retail Furniture Association; Retail Credit Institute of America. Associate members: National Better Business Bureau, Inc., Illinois Federation of Retail Associations; Pennsylvania Retailers' Association, Inc.; National Association of Retail Secretaries. Chairman: Theodore B. Griffith. Managing Director: Roger Wolcott. Headquarters: 8 West 40th Street, New York 18, New York. New publications issued during 1946 include *Why We Need To Work Together: A Primer on Consumer-Retailer Cooperation*; *Stretching Your Fruit and Vegetable Dollar*; *Building Sound Consumer-Business Relations*; *The Ninth Annual Report*; *Consumer-Retailer Goals*. The Council now has twenty-two publications available for general distribution, including its monthly bulletin, the *NCRO News*. The number of copies of Council publications distributed to teachers, consumer groups, and retailers increased forty-seven percent, compared with the previous year. Council committees which have important projects under way include the Teacher-Retailer Cooperation Committee; Committee on Label Outlines; Committee on Quality Floors; Committee on College Research; Committee on Informative Advertising.

**Consumers League, National**, founded in 1899 to awaken consumer responsibility for conditions under which goods are made and distributed, and through investigation, education, and legislation to promote fair labor standards;

this includes State and Federal minimum wage laws, child labor legislation, social security measures, limitation of hours of work for women, proper enforcement of labor laws. Membership: 15,000, including State and National Leagues. President: Alice Hamilton, M.D.; Chairman of the Board: Everett Moore Baker. Headquarters: 348 Engineers Bldg., Cleveland 14, Ohio.

**Consumers' Research, Inc.**, founded as the Consumers' Club in 1927 and incorporated in 1929 to provide unbiased information and counsel on goods bought by the ultimate consumer. Number of subscribers: 50,000. President and Technical Director: F. J. Schlink. Secretary: Clark O. Willever. Headquarters: Washington, New Jersey. The monthly issues of *Consumers' Research Bulletin* (and an annual cumulative issue of about 200 pages) present the findings of CR's tests on washing machines, refrigerators, vacuum cleaners, and many other new electrical appliances, rating them by brand name as *Recommended*, *Intermediate*, or *Not Recommended* on the basis of comparative performance. In addition, there are numerous discussions of the outstanding features of the new automobiles, of important matters connected with the design and equipment of the home, as well as analyses of a wide range of household cleaning preparations and detergents. Monthly features are a "Consumers' Observation Post" and ratings of motion pictures and phonograph records.

**Consumers Union of U. S., Inc.**, founded in 1936, is a nonprofit membership organization which tests and reports on a wide variety of products and services to its more than 100,000 members, through its monthly publication, *Consumer Reports*. An annual *Buying Guide* summarizes the year's reports in handbook form and carries many additional ratings and much buying data. Economic information of concern to consumers is presented through a weekly publication, *Bread and Butter*, which covers news of interest in legislation, government and other activities. Consumers Union tests and reports on new consumer durable goods such as radios, automobiles, refrigerators, washing machines, vacuum cleaners, pressure cookers, as well as on foods, textiles, clothing, drugs, cosmetics, etc. In *Consumer Reports* there is included much additional information on health and medical care, nutrition, insurance, taxes, etc. President: Colston E. Warner. Secretary: Harold Aaron. Director: Arthur Kallet. Editor: Madeline Ross. Editorial offices and technical laboratories, 17 Union Square West, New York 3, New York.

**Cooperative League of the USA**, The, founded in 1916 as a national educational federation of the consumer cooperative movement, was reorganized in 1946 on its thirtieth anniversary, and now serves as the national co-ordinating federation of all types of consumer cooperatives.

The Cooperative League in its new capacity will serve as the promotion agency, publishing body, educational as well as research organization, and representative agency for commodity cooperatives (handling foodstuffs, petroleum products, farm supplies, etc.), cooperative housing associations, medical and hospital cooperatives, credit unions, cooperative insurance associations and banking organizations, burial associations, camp and recreation organizations, student cooperatives and other organizations in the consumer cooperative field.

The Cooperative League maintains offices at 343 South Dearborn Street, Chicago 4, at 726 Jackson Place, N.W., Washington 6, D.C. and 167 West 12th Street, New York 11, New York. President: Murray D. Lincoln, General Secretary: E. R. Bowen.

Membership of consumer and purchasing cooperatives in the United States is estimated at 3,000,000 American families, with a business of more than \$1,000,000,000 a year, serving the fields mentioned above.

**Cooperatives Inc., National**, was founded in 1934 as the national federation of consumer purchasing cooperatives in the field of commodities, distribution, and production. There are twenty-two affiliated regional cooperative organizations in the United States and Canada, with 4,030 local cooperatives operating 4,746 retail outlets, and a total number of patron-members at the close of 1945 totalling 1,336,714. President: A. J. Hayes. Vice-President: J. L. Nolan. Secretary-Treasurer: Howard A. Cowden. General Manager: T. A. Tenhune. Headquarters: 843 South Dearborn Street, Chicago 4, Illinois. National Cooperatives serves as a purchasing, merchandising and production organization for its constituent members. At the close of 1946 the Organization took over the education and promotion operations for its constituent members, previously carried on by the Cooperative League of the USA. The consumer cooperative associations affiliated with National were operating 158 mills, factories and oil refineries, producing goods for distribution to its wholesalers and retail cooperative associations.

**Cotton Manufacturers, National Association of**, founded in 1854 for service to cotton mills and rayon weaving mills in the northeastern section of the United States. Membership: about 450. President: Russell T. Fisher. Headquarters: 80 Federal Street, Boston 10, Massachusetts. Student Honor Medals awarded in various textile schools annually.

**Credit Bureaus of America, Inc., Associated**, founded in 1906, as a trade association dedicated to the promotion of sound credit principles. It has as its major objective the serving of America's retail credit granters, by enabling them to extend credit wisely and collect outstanding accounts promptly. Membership: 2,078. President: Arthur F. Henning. Vice President: Fred S. Krieger. Executive Vice-President: Harold A. Wallace. Chairman of the Collection Service Division: Earle B. Dows. Vice-Chairman of the Collection Service Division: Harry E. Boyd. Headquarters: 1218 Olive Street, St. Louis 8, Missouri. During 1946, developed sound credit and collection procedure on an international basis through close cooperation with National Retail Credit Association. The National Convention will be held at the Hotel Jefferson, St. Louis, Missouri, June 18-19, 1947.

**Credit Union National Association, Inc.**, founded 1934 to organize and service the credit unions in the United States and Canada. Membership: 54 Leagues serving 4,000,000 members. President: R. A. West. Managing Director: Thomas W. Doig. Headquarters: 1842 East Washington Avenue, Madison 1, Wisconsin. Canadian credit unions were accepted to membership in 1940, and the Leagues include eight in Canada; also League in Jamaica, British West Indies. The twelfth annual meeting will be held in May, 1947.

**Dairy Council, National**, founded in 1918, as a nonprofit organization devoted to nutritional research and to education in the use of dairy products, in the promotion of national health and human welfare. Membership: 742 Supporting Members from all branches of the dairy industry, in addition to several thousand who support only individual affiliated units. President: Milton Hult. First Vice President: W. A. Wentworth. Second Vice President: George F. Gallagher. Secretary: Wilbur Carlson. Treasurer: G. E. Wallis. Headquarters: 111 North Canal Street, Chicago 6, Illinois. The Winter Conference (Annual Meeting) is to be held at the Hotel Traymore, Atlantic City, New Jersey, January 29-31, 1947. The Summer Conference will be held at the Edgewater Beach Hotel, Chicago, Illinois, June 15-19, 1947.

**Daughters of the American Revolution, National Society of**, founded in 1890 for historical, educational and patriotic purposes. Membership in 1946 about 151,700 members in 2,570 chapters. Mrs. Julius Y. Talmadge, President General. Administration Bldg., 1720 D Street, N.W., Washington 6, D.C.

Society's headquarters are located in Washington, D.C., comprising one city block, including Memorial Continental Hall, a building of state rooms with auditorium seating 1600. Administration Building, housing Society's offices; and Constitution Hall, an auditorium seating 4,000—acclaimed concert hall of the city.

Society's record of War Work. From D.A.R. War Fund—collected from voluntary contributions by members during period of war Over \$400,000.00 expended from this fund, through the American Red Cross, for the purchase of equipment for the Blood Plasma Program, i.e. 38 Mobile Blood Plasma Units, located in various cities; 18 stationary Blood Donor Centers, located in cities throughout the United States, Station Wagons, Sedans, Trucks, Canteens, Sterilizer, Heater and Equipment.

For the U.S. Army Wired Program Distribution System at Vaughan General Hospital at Hines, Ill., \$61,200.00, 5 station, individual selective head-set equipment, for 2,500 bed patients.

For the U.S. Navy 3 Mobile Photo-fluorographic Units (auto trailer) for U.S. Navy Medical Corps, 7 portable X-Ray units for hospital ships; 3 field ambulances; \$56,682.00.

For the U.S. Public Health Service Hospitals—33 Mills Sono-Vision Projectors (Portable Motion Picture Machines) at \$570 each—\$18,810.00.

Steel encased Hammond Electric Organ for Aircraft Carrier, \$1,500.00, triptychs (alt altar pieces for Armed Forces) \$2,000.00; metal body locators—28, purchased by Junior D.A.R.—\$9,800.00.

In addition, as war work: War Bonds and stamps subscribed, \$208,138,015.06, Buddy Bags made for servicemen 300,000; L.C.I.—82 ships sponsored by Society; Post War Employment program launched for personnel of L.C.I. Ships.

The Society has 24 active national committees covering patriotic, educational and historical fields. Most important among these is the Approved Schools program, to which \$102,603.81 was subscribed in 1946, whereby 14 mountain schools are assisted by D.A.R. funds. Two of these schools in the southern mountains are entirely owned and operated by the D.A.R.

Patriotic education for better citizenship is furthered by the Society in aiding underprivileged youths of all races, creeds and color. The Junior American Citizens Clubs, Girl Home Makers, Good Citizenship Pilgrims, and the mountain schools as mentioned above, are all examples.

The *D.A.R. Manual for Citizenship*, first published in 1921, printed in English and translated into 17 other languages, has been widely distributed. To date over 7,000,000 copies have been distributed to new citizens.

The principal historic project at present is the Society's undertaking to finance the building of the Bell Tower to house the Bells of the great carillon at Valley Forge, Pa. This tower is being subscribed by donations from members by recording names on metal plates to be placed in the Tower of all American patriots, from the American Revolutionary War, through and including World Wars I and II.

Official publications of the Society, namely, the *National Defense News* and the *Daughters of the American Revolution Magazine*, bring these activities and others to the attention of members and friends.

**Daughters of Union Veterans of the Civil War, 1861-1865, Inc.**, organized in 1885 to perpetuate the memory of their fathers. It is affiliated with the Grand Army of the Republic and kindred orders, the Women's Patriotic Conference on National Defense, and the Women's Interests Section, Public Relations, War Department. The sum of \$1,850.00 was given to the Grand Army of the Republic at their August 1946 Encampment, over \$3,000 raised for Projected Books for Veterans' Hospitals, and \$400 added to the Scholarship Funds. The National President elected August 25, 1946 is Miss Cora E. Gillis, 43 Adams Street, Jamestown, New York. The Organization owns its Headquarters Building, 1326 18th Street, N.W., Washington 6, D.C., which is the permanent residence of the National Treasurer. Present membership 35,000.

**Democracy, Council for**, founded in August, 1940, a social action group for the defense and extension of democracy. Chairman, Board of Directors, Raymond Swing, President, Ernest Angell, Executive Director, James E. Greer, National Board of Directors (150 members) Headquarters 11 West 42nd Street, New York 18, New York. A non-political, non-partisan group, the Council's aim is to stimulate citizen participation in action to meet the issues of democracy. It is the coordinating agency for over twenty organizations concerned with questions of national policy—both foreign and domestic.

**Dental Association, American**, founded in 1859 for educational purposes. Membership about 60,000. President, Walter H. Scherer. General Secretary Harry B. Pinney. Headquarters, 222 East Superior Street, Chicago 11, Illinois.

**Dietetic Association, The American**, founded in 1917. Its objective is to improve the nutritional status of human beings, to bring about closer cooperation among dietitians and between dietitians and workers in allied fields, and to improve conditions and raise the standards of dietary work. Membership: 7,500. President: Mable MacLachlan. Executive Secretary: Gladys E. Hall. Headquarters 620 North Michigan Avenue, Chicago 11, Illinois.

**Documentation Institute, The American**, founded in 1937 for the promotion and development of documentation in scholarly and scientific fields. The Institute was organized as a nonprofit corporation, with members nominated by scholarly and scientific agencies. President Watson Davis. Secretary, Helen M. Davis. Headquarters Science Service Building, 1719 N Street, N.W., Washington 6, D.C. The annual meeting is scheduled for January 30, 1947, in Washington, D.C.

**East and West Association, The**, organized in 1941, and devoted to new and better understanding between peoples through mutual knowledge. President Pearl S. Buck. Secretary Albert H. Walsh. Headquarters 40 East 49 Street, New York 17, New York. During 1946, the Association arranged and conducted forums and courses on the peoples of the world in New York, Philadelphia, Springfield (Mass.), Detroit, Chicago, Boston, South Bend, etc. It has also arranged special institutes for librarians and teachers. It continues to publish study outlines, picture portfolios about various peoples and reading lists. It has introduced a new character, Johnny Everyman, into regularly appearing comic books. *The Open Door*, sponsored by forty ministers and rabbis, mediates cases of discrimination arising from race, color or religion. Speakers, informed, non-official representatives of Latin America, Europe, Asia, and Africa are sent out by the Association to all types of groups.

**Economic Association, American**, founded in 1885 to encourage research, thought and discussion, and issue publications. Membership 4,403; 2,025 subscribers. President E. A. Goldenweiser. Managing Editor of *American Economic Review* Paul T. Homan. Secretary-Treasurer and Editor of *Proceedings* James Washington Bell. Headquarters Northwestern University, Evanston, Illinois. Next annual meeting will be held in Atlantic City, N.J., January 23-26, 1947. A quarterly journal, the *American Economic Review* covers a wide range of economic subjects of vital and current importance. A Directory, with annual supplements, contains a special-purpose, "who's who" account of members, together with classification by fields of subject matter and geographical location. An information booklet is also published. The Association is affiliated with the American Council of Learned Societies and the Social Science Research Council.

**Economic Development, Committee for**, an independent nonpolitical nonprofit corporation organized by American businessmen in 1942 to help commerce and industry make

its maximum contribution towards maintaining high levels of productivity and employment in the postwar period. The Field Development Division, which during the war enlisted the active participation of 70,000 businessmen in 2955 local committees in company-by-company reconversion planning, terminated its activities early in 1946. The Research Division, during the year accelerated its program of studies of the broad problems of government and business, undertaken in cooperation by businessmen and social scientists to establish those principles needed in the creation of conditions favorable to expansion of production and employment. At the same time, an Information Division was organized to obtain nation-wide distribution of the reports and policy statements resulting from CED research and to stimulate the study and discussion of economic problems by businessmen and others. Chairman of the Board of Trustees Paul G. Hoffman. Chairman, Research and Policy Committee, Ralph E. Flanders. Chairman, Research Advisory Board, Sumner H. Slichter. Chairman, Information Committee, Walter D. Fuller. Research Director Theodore O. Yntema. Director of Information Programs Howard L. Volgenau. Headquarters 285 Madison Ave., New York 17, New York.

**Economic Entomologists, American Association of**, founded in 1899 to promote the study, and to advance the science, of entomology and to publish the *Journal of Economic Entomology*, etc. Membership, 1,876. President Clay Lyle. Secretary Ernest N. Cory. Headquarters College Park, Maryland. The 1946 meeting was held in Pittsburgh, Pennsylvania.

**Economic Research, Inc., National Bureau of**, founded in 1920 to encourage investigation, research and discovery, and the application of knowledge to the well being of mankind, and in particular to conduct exact and impartial investigations in the field of economic, social, and industrial science. Membership 27 members of the Board of Directors. President C. Reinold Noyes. Executive Director, William J. Carson. Director of Research, Arthur F. Burns. Headquarters 1819 Broadway, New York 23, N.Y. Eleven publications were issued in 1946 dealing with production and productivity, national income, capital formation, business financing, business cycles, etc.

**Education, American Council on**, a Council of national educational associations, organizations having related interests, approved educational institutions, state departments of education, and city school systems; founded in 1918 as a center of cooperation and coordination in the field of education. Membership 905 organizations and institutions. President: George F. Zook. Chairman George D. Stoddard. Headquarters 744 Jackson Place, Washington 6, D.C. The Council acts as liaison agency between educational institutions and the government, and as a clearing house for information and the exchange of opinion. Since the cessation of hostilities it has inaugurated several postwar projects for the expansion of educational facilities and the improvement of educational programs. The Council publishes reports of its research projects, other monographs, psychological tests, and a quarterly journal, *The Educational Record*.

**Education Association of the United States, National (NEA)**, founded in 1857 to advance the interests of the teaching profession, promote the welfare of children, and foster the education of all the people. Membership 340,973. President Mrs. Pearl A. Wanamaker. Executive Secretary Willard E. Givens. Headquarters 1201 Sixteenth Street, N.W., Washington 6, D.C. See EDUCATION.

**Education Fellowship, American** (formerly Progressive Education Association), incorporated in 1944 to develop and promote progressive principles of education through local chapter organizations, field conferences, preparation and distribution of educational materials, a Service Center for members, and publication of a journal, *Progressive Education*. Membership about 8,000. Director Vinal H. Tibbets. Headquarters 289 Fourth Avenue, New York 10, New York. See EDUCATION.

**Electrical Engineers, American Institute of**, founded in 1884 for the advancement of the theory and practice of electrical engineering and allied arts and sciences, and maintenance of high professional standing among its members. Membership 26,114. President J. Elmer Housley. Secretary H. H. Henline. Headquarters 33 West 39th Street, New York 18, New York. 1947 meetings: New York City, January 27-31; Montreal, Quebec, June 9-13; San Diego, California, August 26-29; Chicago, Illinois, November 3-7; district meetings: Worcester, Massachusetts, and Dayton, Ohio.

**Elks, Benevolent and Protective Order of**, a fraternal organization founded in 1868. Membership 850,000. Grand Exalted Ruler Charles E. Broughton. Grand Secretary J. E. Masters. Headquarters, Elks National Memorial Building, Chicago 14, Illinois. A National Veterans Service Commission is working out detailed plans for the rehabilitation of veterans. The Order maintains at Bedford, Virginia, a home for aged and indigent members. An Elks National Foundation Fund aids crippled children, tubercular patients, and grants scholarships. Expenditures for charitable and welfare purposes amounted to \$4,200,000 in 1946. The national journal is *The Elks Magazine*.

**English Institute, The**, founded in 1939 to afford an opportunity for mature scholars in the field of English to meet together in a series of informal conferences and discuss questions of literary and philological research. Selected papers read at the sessions of 1939, 1940, 1941 and 1942 have been published in the *English Institute Annual*. The fifth session, for which one hundred sixty-nine members registered, was held at Columbia University, September 9-13, 1946. Again in 1947 the Institute will meet at Columbia University in the second week of September. Chairman: Dorothy Bethurum, Connecticut College, New London, Connecticut. Secretary: David A. Robertson, Jr., Barnard College, Columbia University, New York 27, New York.

**English-Speaking Union of the United States**, founded in 1920 to draw together in the bond of comradeship the English-speaking people of the world. It cooperates with the English-Speaking Union of the British Empire, Dartmouth House, London. Membership: about 15,000. Headquarters: 19 East 54th Street, New York 22, New York. Honorary Presidents: John W. Davis and James R. Angell. President: Lewis W. Douglas. Chairman: Henry J. Fisher. Treasurer: Henry C. Brunie, General Secretary: Mrs. W. Henry France. Present activities: a national program for hospitality and aid to all overseas brides of American servicemen with committees through the country, resumption of interchange of teachers between Great Britain and the United States with seventy-five British teachers in the United States and seventy-five Americans in Great Britain, 4 British students have been granted scholarship aid to study in American universities under the Sir John Dill Memorial Fund, thirteen American school boys have been sent to England for one year's schooling in British public schools on scholarships.

**Ethnological Society, Inc., American**, founded in 1842. The Society meets regularly at the American Museum of Natural History for lectures and discussions of scientific work and problems in anthropology. It publishes a monograph series of anthropological and linguistic researches. Membership: 224. President: Hortense Powdermaker. Secretary: Esther S. Goldkraft, Columbia University, New York 27, New York. See SMITHSONIAN INSTITUTION.

**Eugenics Society, Inc., American**, founded in 1926 to promote education and social action relating to eugenics. Membership: 500. President: Dr. Maurice A. Bigelow. Secretary: Chauncey Belknap. Treasurer: Frederick Osborn. Headquarters: 1790 Broadway, New York 19, N.Y.

**Exchange Club, The National**, founded in 1911 for the purpose of educating, improving, and developing the capabilities of the members of the clubs chartered by this corporation and of the citizens of the communities, municipalities, and states in which such clubs are chartered. Membership: 40,000. National President: William P. Spear, National Secretary: Herold M. Harter. Headquarters: 335 Superior Street, Toledo 4, Ohio. As an educational service, the Club publishes an official, monthly publication, *The Exchange*. This magazine reaches the individual members of all Exchange Clubs and carries material that is used by Exchange Clubs locally in presenting the general educational program to the public.

**Family Service Association of America**, founded in 1910 as a voluntary federation of public and private family case work agencies and individuals in the United States and Canada, furthering the development and extension of helpful, normal family life. Services reach Member Agencies through direct contact, group consultation, correspondence, and published material. Membership: 230 member agencies. President: Ralph A. Uihlein. First Vice President: Stanley P. Davies. Second Vice President: Brooks Potter. Treasurer: Henry S. Hendricks. Secretary: Mrs. Malcolm J. Edgerton. Headquarters: 122 East 22nd Street, New York 10, New York. The Biennial Meeting was held at the Hotel Pennsylvania, New York, New York, October 31 through November 2, 1946.

**Farm Bureau Federation, American**, organized in 1920 to meet and solve the pressing economic problems of agriculture. Membership: 900,000. President: Edward A. O'Neal. Secretary: Treasurer: R. B. Corbett. Headquarters: 58 East Washington, Chicago 2, Ill. Since its inception, the Federation has labored to further such projects as adequate farm prices, better farm-to-market roads, adequate credit facilities; freedom of competition among transportation agencies; solution of problems of irrigation, adequate appropriations for the Forest Service; development of rural youth programs.

**Farm Chemurgic Council, National**, organized in 1934, to advance the industrial use of American farm products through applied science. Membership: 4,000. President: Wheeler McMillen. Secretary: Ernest L. Little. Headquarters: 1368 North High St., Columbus 1, Ohio. Eastern Office: 850 Fifth Ave., New York, New York. Southwestern Office: Chamber of Commerce Bldg., Oklahoma City, Oklahoma. The Council has scheduled many meetings for 1947.

**Farmer Cooperatives, National Council of**, founded in 1929 to serve, represent, and coordinate, nationally, the program and efforts of farmers' cooperative purchasing

and marketing associations. Membership: 4,600 associations. President: Quentin Reynolds. Executive Secretary: John H. Davis. Headquarters: 1781 I Street, N.W., Washington 6, D.C. The regular meeting of Council delegates from all parts of the nation will be held in Chicago, January 6-10, 1947.

**Farmers Educational and Cooperative Union of America**, founded in 1902, and generally known as the National Farmers Union, is devoted to assuring security of farm families on the land, in an economy of abundance brought about by a free exchange of goods and services. Farmers Union works in the fields of education, legislation, and cooperatives to improve the position of family farmers. Membership: 450,000. President: James G. Patton, Vice President: Herbert Rolph. Secretary: Treasurer: Tony T. Dechant. Headquarters: 3501 E. 46th Avenue, Denver 16, Colorado.

**Fashion Group, Inc., The**, was founded February, 1931, as "a non-commercial association of women engaged in fashion work, formed to advance the principles of applied art in industry and to foster good taste in fashion; to encourage the cooperation of those engaged in conceiving, designing, and executing fashions, and, through education and the dissemination of useful information, to inspire a keener interest in fashion industries to the end that those engaged in the field of fashion may better serve themselves and the public at large." Membership: 1,524. President: Kay Sullivan. Vice-Presidents: Mary Bass, Adelia B. Elias, and Helen F. Keane. Treasurer: Clare Elliott. Executive Director: Ethel M. Kremer. Headquarters: 9 Rockefeller Plaza, New York 20, New York. During 1946, Monthly Luncheons were held, two to three each month except July and August, and a Fashion Training Course was given. Meetings will be held in 1947, monthly, at the Hotel Biltmore, New York, New York.

**Federal Union, Inc.**, founded 1939, was incorporated in 1940 as a non-profit educational membership association to promote "education in the basic principles of federal union as exemplified in the Constitution of the United States with a view to attaining world order by a federal union of democratic peoples." President: Clarence K. Streit. Secretary: Brice Toole. Executive Director: Don Dennis. Headquarters: 700 Ninth St. N.W., Washington 1, D.C. The United States Treasury has ruled that contributions to Federal Union are deductible from taxable income because of the educational character of its activity. In the fall of 1946 the association launched its new monthly magazine *Freedom & Union*, "Journal of the World Republic," with Mr. Streit as editor. This important new journal takes for its task the securing of peace and freedom in the atomic age, through world government.

**Fire Protection Association, National**, founded in 1896 to promote the science and improve the methods of fire protection and prevention, to obtain and circulate information, and to secure the cooperation of its members in establishing safeguards against fire loss. Membership: 11,000. President: Curtis W. Pierce. General Manager: Percy Bugbee. Headquarters: 60 Battery March Street, Boston 10, Massachusetts. See FIRE PROTECTION.

**Fire Underwriters, National Board of**, an educational, factual, and engineering organization founded in 1866 and supported by the capital stock fire insurance business. Membership: 208. President: F. A. Christensen. General Manager: W. E. Mallahew. Headquarters: 85 John Street, New York 7, New York. The 1947 meeting will be held May 22, in New York City.

**Food Technologists, The Institute of**, established in 1939 to provide a professional organization which will facilitate interchange of ideas, stimulate and promulgate the results of research and work in the application of science to the food industry, and encourage the development of food technology as a profession. Membership: about 2,000. President: E. H. Harvey. Secretary-Treasurer: George J. Hucker. Geneva, New York. Regional sections have been granted charter in Southern California, Northern California, New England, St. Louis, New York, Florida, Great Lakes, Western New York, Puget Sound, Philadelphia, Maryland and Chicago.

**Foreign Relations, Inc., Council on**, a nonpartisan, non-commercial research organization, founded in 1917 to study the international aspects of America's political, economic, and financial problems. Membership: 750. President: Allen W. Dulles. Vice President: Isaiah Bowman. Executive Director: Walter H. Mallory. Headquarters: 58 East 68th Street, New York 21, New York. The Council holds meetings and conferences, and maintains a reference library on international affairs. It carries on a program of research and publishes: a quarterly review, *Foreign Affairs*; two annuals, *The United States in World Affairs* and *The Political Handbook of the World*; and individual volumes on international questions. In 1944 the Council acquired its new headquarters, known as the Harold Pratt House, at the corner of Park Avenue and 68th Street. It was formally opened by Secretary of State Stettinius on April 6th, 1945.

**Foresters, Society of American**, founded in 1900 to represent, advance, and protect the interests and standards of the profession of forestry and to provide a medium for

the exchange of professional thought. Membership: 4,800. President: Prof. S. W. Allen. Executive Secretary: Henry Clepper. Headquarters: Mills Building, Washington 6, D.C.

**Forestry Association, The American**, founded in 1875, is a citizens' organization for the advancement of intelligent management and use of the country's forests and their related resources of soil, water, wildlife, and outdoor recreation. Membership: 15,000. President: W. S. Rosecrans. Executive Director: Ovid Butler. Headquarters: 919 Seventeenth Street, Washington 6, D.C. In addition to the publication of a monthly magazine, *American Forester*, the Association carries on educational projects in various fields.

**Foster Parents' Plan for War Children, Inc.**, founded in 1936 to help children of all nationalities suffering as a result of war. International Chairman: Edna Blue. Secretary-Treasurer: Ann Landress. Director, Public Relations: Robert Yaller. Executive Secretary: Eric G. Mugeridge. Overseas Representatives: Mr. and Mrs. F. W. Mason. British headquarters: 95 Coleman Street, Wool Exchange, London E.C. 2, England. American headquarters: 55 West 42 Street, New York 18, New York. The Plan operates fifty-six projects in England, France, Malta, Italy, Belgium, Holland, and Czechoslovakia; schools for farmers, nurses and social workers, as well as hostels for children of all nationalities—Polish, Czech, French, Dutch, Belgian, Spanish, Austrian, Norwegian, German, Italian, Maltese and British.

**Fraternal Congress of America, National**, founded in Washington, D.C., November 16, 1886, to unite all fraternal benefit societies of America for mutual improvement and concert of actions. Membership: 109 societies. President: Walter C. Below. Secretary-Treasurer and Manager: Foster F. Farrell. Headquarters: 35 East Wacker Drive, Chicago 1, Illinois. The 1946 meeting was held in September.

**French Alliances in the United States and Canada, Federation of**, was founded in 1902, as "an association of clubs, societies, and groups formed for the purpose of encouraging and furthering in the United States and Canada the study and cultivation of the language, literature, art, and history of France. Membership: 220 societies. President: Dr. Guy E. Snavely. President, Executive Committee: Richard J. Cronan. Secretary General: Robert John Matthew. Assistant Secretary: Lucie Gaidot. Headquarters: 22 East 60th Street, New York 22, New York. The Annual General Assembly and Luncheon will be held at the Hotel Plaza, New York, New York, on April 12, 1947.

**Friends Service Committee, American**, founded in 1917, and representing the Religious Society of Friends in fields of social action, engaging in both domestic and foreign projects to express the Quaker principle that constructive and nonviolent service can resolve conflicts. Honorary Chairman: Rufus M. Jones, Chairman: Henry J. Cadbury, Executive Secretary: Clarence E. Pickett. Headquarters: 20 South 12th Street, Philadelphia 7, Pennsylvania.

**Future Farmers of America (F.F.A.)**, founded November 1928, as national organization of, by, and for farm boys studying vocational agriculture in public secondary schools. Primary aim, development of agricultural leadership, cooperation, and citizenship. Specific purposes: intend to strengthen confidence of farm boys and young men in their work; create and nurture a love of country life and intelligent choice of farming occupations, improve the rural home, encourage thrift, scholarship, and organized rural recreation. Membership, 205,136 in 6,000 local chapters of 47 States, Hawaii, and Puerto Rico. President: Gus R. Douglass, Jr. National Executive Secretary: A. W. Tenney. Headquarters: U.S. Office of Education, Washington 25, D.C. During 1946, Star Farmer of America was William G. Carlin, Coatesville, Pennsylvania. Champion public speaker was Marshall E. Schrier, Newton, Kansas. Gold emblem chapters were DeLand, Florida; Talbotton-Woodland, Georgia; Byron, Illinois; Chenoa, Illinois; Buhler, Kansas; Lafayette-Bryan Station, Kentucky; Versailles, Kentucky; Alma, Michigan; Flathead, Montana; Neligh, Nebraska; Norman, Oklahoma; Albany, Oregon; Alpine, Texas; Jasper, Texas; South Emery, Utah; and Unidis, West Virginia. The National Convention for 1947 was scheduled for October in Kansas City, Missouri.

**Garden Club of America**, founded in 1913. Membership: about 8,000. Corresponding Secretary: Mrs. Henry C. Taylor. Headquarters: 598 Madison Avenue, New York 22, New York.

**Gas Association, American**, founded in 1918 by holding companies, service companies, gas operating companies, manufacturers of gas appliances and equipment, and individuals. Membership: 5,000. President: R. H. Hargrove. Managing Director: H. Carl Wolf. Secretary: Kurwin R. Boyes. Headquarters: 420 Lexington Avenue, New York 17, New York.

**Geographical Society, American**, founded in 1852; devoted to the advancement of geography in its scientific and cultural aspects, its practical applications, and its bearing on fundamental problems of human existence and

human relationships in the different regions of the earth. Membership: 4,900. President: Roland L. Redmond. Director: John K. Wright. Headquarters: Broadway at 156th Street, New York 32, New York. Most recent publications of the Society are: *Japan. A Geographical View* by Guy-Harold Smith and Dorothy Good with the collaboration of Shannon McCune, *Pioneer Settlement in the Asiatic Tropics. Studies in Land Utilization and Agricultural Colonization*, by Karl Pelzer, the 107th and last sheet of the *Map of Hispanic America*, 1:1,000,000 was issued last year.

**Geographic Society, The National**, founded in 1888 for the increase and diffusion of geographic knowledge. Three hundred thousand new members elected in 1946 brought the total membership to 1,500,000. President: Gilbert Grosvenor. Vice President: John Oliver La Gorce. Secretary: Thomas W. McKnew. Treasurer: Robert V. Fleming. Headquarters: 1146 Sixteenth Street, N.W., Washington 6, D.C. In fulfilling its aim to diffuse geographic knowledge the Society relies chiefly on its official publication, the monthly illustrated *National Geographic Magazine*, which is sent to every member. In the summer of 1946, the Society, in cooperation with the United States Army Air Forces and the Bartol Research Foundation of the Franklin Institute, carried out extensive investigations to determine how the numbers of cosmic rays, streaming toward the earth from outer space vary with altitude and latitude. The researches were conducted from a converted B-29 bomber, equipped with Geiger counters and recording apparatus. Round-trip flights were made at 5,000, 15,000, 25,000, and 35,000 feet above sea level over a 4,800-mile course extending from southern Canada to the Magnetic Equator off the northern coast of Chile. The automatic records obtained are now under study. Completing eight years of archeological exploration, the Society and the Smithsonian Institution sent a field party, under the leadership of Dr. Matthew W. Stirling, to a site near San Lorenzo, Veracruz State, where it uncovered a ceremonial center of the "La Venta Culture" which flourished from about A.D. 500 to 800. This was the third great center of the La Venta Culture excavated by the series of expeditions. The party brought to light five colossal heads in human form sculptured from basalt, massive decorated altars, carved monuments, and small art objects, all of superior workmanship. Dr. Stirling believes that the civilization exemplified by the La Venta people may have been a forerunner of much of the culture of the Mayas, the Toltecs and the Aztecs. Studies of auroras were continued by a joint research project of the Society and Cornell University under the direction of Dr. C. W. Gartlein. During the year photographs and photoelectric records were made of more than a score of auroras including the unusually brilliant and extensive displays of the nights of February 7-8, March 23-24 and July 26-27. In its third year of studies of North American birds, an expedition of the Society, led by Dr. Arthur A. Allen, carried on work in bird refuges along the coasts of North and South Carolina, and in Georgia, Florida, Texas, northern Mexico, and the Rocky Mountains of the United States. Four 10-color wall maps issued as supplements to the National Geographic Magazine were prepared during 1946. More than 6,000,000 of these charts were distributed to the Society's members. The map of the Northern Hemisphere covered a land, sea, and ice area of special interest to civil aviation following the development of intercontinental air routes in that part of the world during the War. The postwar map of the United States included information from the most recent aerial and surface surveys. A number of new communities such as Oak Ridge, Tennessee, brought into existence by war activities, appeared for the first time on such a map. The map of India and Burma showed 598 political subdivisions of the British provinces and native states of India. Centered near Palestine, the map of the Bible Lands included most of the countries of the Arab League, all of Turkey, and parts of Iran, Bulgaria and Greece. *The Geographic News Bulletin*, supplying geographic and economic information about places and regions appearing in the news were distributed to more than 500 daily newspapers and approximately 200 radio stations. Illustrated *Geographic School Bulletins* embodying material similar to that in the *News Bulletins* were supplied weekly to more than 35,000 classrooms.

**Gideons, The International (A Christian Business Men's Association)**, founded in 1899 to advance the placing of Bibles in hotels, hospitals, penal institutions, and public schools, and has already placed two and a half million Bibles. Membership: about 17,000. President: Rev. H. Muller. Secretary: Nellie F. Dewar. Headquarters: 212 East Superior Street, Chicago 11, Illinois. The organization has distributed nearly 9 1/4 million Testaments to the Armed Forces.

**Girl Scouts**, founded in 1912 by Juliette Low at Savannah, Georgia to develop the ideals of citizenship and service to others, in girls from the age of 7 through 17, is a member of the World Association of Girl Scouts and Girl Guides. Girls take part in democratic, self-governing activity in eleven general fields: homemaking; arts and

crafts; nature; the out-of-doors; literature and dramatics; health and safety; community life; international friendship; sports and games; music and dancing; and vocational exploration. Girl Scouting is the largest girls' organization of its kind in the world. Membership: 1,151,456 in 8,800 communities. President: Mrs. C. Vaughan Ferguson. National Director: Mrs. Paul Rittenhouse. Headquarters: 155 East 44th Street, New York 17, New York. The thirty-fourth Girl Scout Anniversary Week was celebrated March 12-18, and Girl Scout Week, October 27-November 2, 1946. During 1946 the first Girl Scout and Girl Guide international conferences to be held since the war took place at Evian, France, and Adelboden, Switzerland. Girls and adult leaders of the Scout movement met to discuss future international plans and problems of training, program and leadership. The first Western Hemisphere Girl Scout training Conference, since the war, took place at Havana, Cuba. Representatives of twenty-two countries attended sessions which began on February 4, 1946. In the United States Girl Scouts contributed \$69,275.32 during the period August 31, 1945 to August 31, 1946 to the Juliette Low World Friendship Fund. The Fund was begun in 1927 in memory of the founder of Girl Scouts for the promotion of Girl Scouting and Girl Guiding throughout the world as a contribution toward world peace and goodwill. It was made available in 1946 for the re-establishment of Girl Scout and Girl Guide headquarters in war devastated countries. On July 15, 1946 Girl Scout delegates met with representatives of seventeen youth-serving organizations at a Youth United for Famine Relief conference held at the White House and presided over by President Truman. A long-range program for the conservation and increased production of food was launched. During the summer of 1946 more than 300,000 Girl Scouts attended camps. New camp sites were purchased and more than one hundred new permanent camps established. Camp Edith Macy, Pleasantville, New York, which was dedicated in 1926 at the time of the first international encampment held in the United States, celebrated its twentieth anniversary. Dog Obedience Training was recognized as a regular project of the Girl Scout program in 1946. Girls are taught to train their dogs to obey simple commands and with their dogs undergo American Kennel Club performance tests upon completion of which they are awarded special certificates.

**Grange, The National**, an Order formed in 1867 to give to the American farmer better social and educational opportunities, economic betterment, and higher spiritual and patriotic idealism, active in cooperative work and in State and National Legislation. Membership: 800,000 in 8,000 subordinate Granges. Master: Albert S. Goss. Secretary: Harry A. Caton. Headquarters: 744 Jackson Place, N.W., Washington 6, D.C.

**Greek War Relief Association, Inc., of the U.S.A.**, was founded November 8, 1940, "to solicit, collect and receive monies, funds, and contributions, and to expend, give and contribute same for the charitable purpose of furnishing aid and assistance for the relief and suffering of the Greek people." Membership: approximately 25,000 (voluntary). Executive Committee: The Most Reverend Athenagoras, Harris J. Booras, George P. Gavaris, Evangelos T. Hardaloupas, William Hella, Charles D. Kotzlibas, Van A. Nomikos, Thomas A. Pappas, Frank E. Potanti, George Skouras, Spyros P. Skouras, Stephan Stephanidis, Stephan C. Stephanos, S. Gregory Taylor, K. P. Tsolainos, Philip Williams, Executive Vice-President: George Xanthaky. Headquarters: 221 West 57th Street, New York 19, New York. In its current rehabilitation program, the Greek War Relief gives supplementary school lunches to over 1,000,000 Greek children, and its 425 community and 18 mobile clinics place free medical care within the reach of more than one-third of Greece's rural population. Other special projects include aid for Greek disabled veterans and the home placement and support of hundreds of Greek orphans.

**Grolier Club, The**, founded in 1884, for the purpose of "the literary study and promotion of the arts pertaining to the production of books, including the occasional publication of books designed to illustrate, promote and encourage those arts." Membership: 467. President: Edwin De T. Bechtel. Vice-President: Frederick B. Adams, Jr. Treasurer: LeRoy E. Kimball. Secretary: Allen Everts Foster. Headquarters: 47 East 60th Street, New York 22, New York. Regular meetings, held at 47 East 60th Street, occur on the third Thursday of each month from October through April, except in January when the Annual Meeting is held on the fourth Thursday.

**Hadassah (The Women's Zionist Organization of America, Inc.)**, founded in 1912 to foster Zionist ideals in America and to conduct hospitalization, public health, child welfare, land reclamation, and youth refugee work in Palestine, is official American representative of Youth Aliyah Movement. Senior membership: 180,000. Junior membership: 25,000. President: Mrs. Moses P. Epstein. Executive Secretary: Miss J. N. Leibel. Headquarters: 1819 Broadway, New York 23, New York. During the war Hadassah Medical Center, Mt. Scopus, Jerusalem, was headquarters for wide cooperation program with Al-

lied and American medical authorities. The organization conducts program for democratic action through education among its members in this country. A two hundred fifty-bed tuberculosis hospital and an undergraduate medical school (joint sponsorship by Hadassah and the American Friends of the Hebrew University) are the newest projects. It is also now "health arm" of Immigrant Medical Services Department of Jewish Agency. In addition to the Medical Center, the group runs fifty child welfare stations; thirty-six playgrounds; feeds 80,000 children daily; conducts the Louis D. Brandeis Vocational Center; and provides funds for education and maintenance of Youth Aliyah children. Newest land project is a village for returning soldiers in Palestine.

**Health Council, National**, founded in 1921 to consolidate and correlate the activities of the member agencies and other activities for the betterment of health. Membership: 21 member agencies. President: Philip R. Mather. Vice President: Ira V. Hiscock, S.D. Secretary: Reginald M. Atwater, M.D. Treasurer: Timothy N. Pfeiffer. Headquarters: 1790 Broadway, New York 19, New York. The annual meeting is held in February or March of each year. The outstanding activities of 1946 were the distribution of the Gunn-Platt Report of the Study of Voluntary Health Agencies, in conjunction with the Rockefeller Foundation; and the planning for expansion in Council Activities.

**Hebrew Sheltering and Immigrant Aid Society (HAIS)** was founded in 1884. The Society assists the migrant Jew in matters of immigration; searches for members of families who were separated as a result of the World War; maintains a transmission bureau through which Americans may send food, clothing, and money to destitute relatives abroad. It is supported by voluntary contributions of over 40,000 individuals as well as from Jewish fraternal religious and labor organizations, representing hundreds of thousands of members. President: Abraham Herman. Vice-Presidents: Samuel A. Telsay, Solomon Dingol, Joseph Pulvermacher, Murray I. Gurfein, Samuel Kalesky, Fredric R. Mann, Abraham Minkus, Julius Shafer, and Harry K. Wolf. Treasurer: Harry Fiachel. Associate Treasurer: Samuel Goldstein. Honorary Secretary: Benjamin J. Weinberg. Executive Director: Isaac L. Anofsky. World Headquarters: 425 Lafayette Street, New York 3, New York. The annual meeting of HAIS is to be held in March, 1947.

**Henry George School of Social Science**, founded in 1932, chartered by the Board of Regents of the University of the State of New York for the purpose of teaching fundamental economics and social philosophy. Headquarters in New York, with many branches in cities throughout the United States and Canada. Free courses offered in classroom and by correspondence to adult students everywhere. Headquarters: 50 East 69th Street, New York 21, New York.

**Hispanic Society of America, The**, founded in 1904 as a free public museum and library devoted to Spanish and Portuguese art and literature. The collections include paintings, sculpture, ceramics, metalwork, furniture, textiles, incunabula, illuminated manuscripts, and other works of art. Membership in the Society, which is limited to 100 Members and 800 Corresponding Members, is honorary and includes specialists and scholars distinguished in the Hispanic field. President: Archer M. Huntington. Secretary: Herbert E. Ives. Headquarters: Broadway, between 155th and 156th Streets, New York 32, New York. The Society has issued about six hundred volumes relating to Spanish art, history, and literature.

**Historical Association, American**, founded in 1884 to promote historical studies, the collection and preservation of historical manuscripts, etc. Membership: 3,600. President: Sidney B. Fay. Executive Secretary: Guy Stanton Ford. Headquarters: Study Room 274, Library of Congress Annex, Washington 25, D.C. The annual meeting in 1946 was held in New York on December 27th.

**Historical Society, American Irish**, was founded in 1897, "to make better known the Irish Chapter in American history." Membership: 2,500. President General: James McGurrian. Treasurer General: John W. A. Kelley. Secretary General: J. C. Walsh. Headquarters: 991 Fifth Avenue, New York 28, New York. During 1946, the Medal of Honor was presented to Mr. John S. Burke.

**Home Economics Association, American**, organized in 1908 for development and promotion of standards of home and family life. Membership: 17,000 individuals, 338 college clubs, and 22 groups of homemakers. President: Katharine M. Alderman. Executive Secretary: Lelia Massey. Headquarters: 620 Mills Building, Washington 6, D.C. The 1946-1947 program of work: "The objective of the Association was phrased by Ellen H. Richards as follows: 'Home Economics stands for the freedom of the home from the dominance of things and their due subordination to ideals' and for 'the simplicity in material surroundings which will most free the spirit for the more important and permanent interests of the home and of society.'" The Association, in its program of work for 1946-47 re-affirms its intent to (1) stress the importance of the family and its home as the basic unit of community, state,

national, and international life; (2) promote concern with the important and permanent interests of the family and its home as opposed to those of crass materialism; (3) promote a better understanding of the permanent values of home and family life; (4) participate in sound social action programs directed toward strengthening home and family life; and (5) continue the development of the Association in scope and depth of program, organization, and membership. Nation-wide project, "The Consumer Speaks," is being continued in 1946-47. The purpose of this project is to offer consumers an opportunity to co-operate with forward-looking businessmen in improving postwar markets. The apprentice training committee has established requirements for training in industrial food service. The Membership Standards Committee is conducting a workshop to train twenty people to collect information on the present status of undergraduate work in home economics in sixty representative colleges and universities. Seven international fellowships were awarded to young women from Switzerland (1), China (2), England (1), Greece (2), India (1) for 1946-47. The Borden Award was granted to Ruth Blair, University of Colorado, for outstanding work in nutrition in 1945-46. The Association's Ellen H. Richards research fellowship for 1946-47 went to Mary Mather, State College, Pennsylvania. An annual meeting will be held in St. Louis, Missouri, the week of June 23, 1947.

**Hospital Association, American**, founded in 1899 to promote the welfare of the people through the development and extension of hospital care. Serving 3,600 hospitals and 2,900 hospital representatives in the United States and Canada through an exchange of educational materials and technical information. President Peter D. Ward, M.D. Treasurer Harley A. Haynes, M.D. Executive Director George Bugbee. Headquarters 18 East Division Street, Chicago 10, Illinois. Seven professional and administrative counseling bodies compile and disseminate information to those interested in the public health and welfare. Bacon Library in Association headquarters is the largest library in the world devoted to hospital literature. The Hospital Service Plan Commission, comprised of 85 Blue Cross prepayment hospital-care plans and 33 affiliated medical care plans, serves 20 million participants throughout the country. The Commission on Hospital Care, a non-government public service analysis of health facilities in this country, was inaugurated in 1944.

**Hotel Association, American**, founded in 1910, to work for a better hotel industry by representing a group of individual businesses of all sizes in social, economic, and legislative matters at the national level by making the best thinking on hotel operation available to all member hotels, by rendering essential services that would be economically unsound if performed by the individual member; and, when so instructed, by speaking for the industry on government matters and subjects of public interest. Membership: 5,600. President: Leonard Hicks. Morrison Hotel, Chicago, Illinois. First Vice President: Howard F. Dugan. Hotels Statler Company, Inc., New York. New York. Second Vice President: Joe H. Adams. El Comodoro Hotel, Miami, Florida. Secretary: J. B. Herndon, Jr., Hilton Hotels Corporation, New York. New York. Treasurer: C. J. Mack. Mayflower Hotel, Washington, D.C. Chairman of the Board: J. E. Frayne, Fort Shelby Hotel, Detroit, Michigan. Executive Vice President: Charles A. Horowitz, 221 West 57th Street, New York 19, New York. Headquarters: 221 West 57th Street, New York 19, New York. Time and place of 1947 Annual Convention undetermined.

**Humane Association, The American**, founded in 1877 for the prevention of cruelty to children and animals. Membership: 11,000. President: Robert F. Sellar, 135 Washington Avenue, Albany 6, New York. Secretary: Eric H. Hansen. Approximately 600 affiliates in United States, Canada and Latin America. Holding of Annual National Convention resumed in 1946 after suspension during war.

**Illustrators, Inc., Society of**, founded in February, 1901, to promote and stimulate interest in the art of illustration, past, present, and future, and to give impetus generally toward high ideals in the art by means of exhibitions, lectures, educational programs, social intercourse, and in such other ways as may seem advisable. Membership: 400. Honorary President: Wallace Morgan. President: Arthur William Brown. First Vice President: Roy Spreter. Second Vice President: Fred Ludekens. Corresponding Secretary: Budd Hemmick. Recording Secretary: John Vickery. Treasurer: James D. Herbert. Headquarters: 128 East 63rd Street, New York 21, New York.

**Industrial Conference Board, Inc., National**, founded in 1916. An independent and non-profit institution for scientific research, education, and practical service and information in the fields of economics and business. President: Dr. Virgil Jordan. Secretary: Clyde L. Rogers. Headquarters: 247 Park Avenue, New York 17, New York.

**Industrial Council, National**, founded in 1907 to provide state and local industrial and manufacturing trade associations with a forum for discussion of industrial and associational problems and programs. Membership: 825 associations. Chairman: Ira Mosher. Executive Director:

T. M. Brennan. Headquarters: 14 West 49th Street, New York 20, New York.

**Industrial Organizations, Congress of (CIO)**, founded in November, 1935, to bring about the effective organization of the working men and women of America, regardless of race, creed, color, or nationality, and to unite them for common action into labor unions for their mutual aid and protection. Claimed membership: 6,300,000. President: Philip Murray. Secretary: Treasurer: James B. Carey. Headquarters: 718 Jackson Place, Washington 6, D.C. The Congress achieved an outstanding record during the war in all basic war production industries, with CIO workers mainly responsible for a 400 percent increase in production. Served in a consultative capacity to the United Nations Conference for International Organization. Instrumental in forming World Federation of Trade Unions, of which it is a member.

**Industrial Relations Counselors, Inc.**, established in 1926 to advance the knowledge and practice of human relationships in industry, commerce, education, and government. Director: T. H. A. Tiedemann. Headquarters: 1270 Avenue of Americas, New York 20, New York. The organization conducts research, offers a consulting service, mainly for industrial corporations, and maintains a specialized industrial-relations library and an information service. Fifteen volumes and twelve monographs had been published by the close of 1946.

**Industrial Research Institute, Inc.**, was founded under the auspices of National Research Council in February, 1938 (incorporated 1945), to promote, through the cooperative efforts of its members improved, more economical and more effective techniques of organization, administration, and operation of industrial research, to develop and disseminate information as to the organization, administration, and operation of industrial research, to stimulate and develop an understanding of research as a force in the economic, industrial and social activity of the nation; and to promote high standards in the field of industrial research. Reports and papers of general interest and value are released for publication in technical and business journals. Medal established 1945, primarily to honor management leadership in industrial research. First Medal awarded 1946 to W. R. Whitney. Organizer and First Director of General Electric Research Laboratory. A comprehensive monograph on the management of industrial research written by members of the Institute is to be published in 1947. Book to be authoritative reference work for men administering research and a suitable textbook for graduate courses in universities. Membership: 86 companies. President: C. S. Venable. Secretary: C. G. Worthington. Headquarters: 60 East 42nd St., New York 17, New York. Meetings in 1946: Columbus and Cleveland, Ohio, and Rye, New York. February 1947 meeting scheduled for Chicago.

**Infantile Paralysis, Inc., The National Foundation for**, founded January 3, 1938, "to lead, direct, and unify the fight against infantile paralysis." Activities include research, education, epidemic aid, and medical care. Grants are made to institutions for research in the transmission, prevention, and cure, as well as in improved treatment methods. The educational program provides information to professional and lay groups, and scholarships for training of doctors, nurses, and physical therapists in modern treatment methods, health education, medical social work, and orthopedic public health nursing. Scholarships and fellowships are offered for training in virology, public health, welfare and social agencies, epidemic preparedness programs are conducted to help communities meet outbreaks. Epidemic aid such as money, equipment, personnel and professional consultations is available to communities. The Foundation, through its Chapters, provides funds to pay for the treatment of needy infantile paralysis patients regardless of age, race, creed or color. Membership: 3,070 County Chapters throughout the country. President: Basil O'Connor. Vice Presidents: Frederick B. Adams, George E. Allen, John S. Burke, James V. Forrestal, and William F. Humphrey. Vice President and Secretary: William F. Snyder. Treasurer: Howard W. Dayton. Assistant Treasurer and Comptroller: Louis C. Haughey. Assistant Secretary: Earle R. Koons. Assistant Secretary and General Counsel: Stephen V. Ryan, Jr. Headquarters: 120 Broadway, New York 5, New York.

**Information Bureau, Inc., National**, a nonprofit membership corporation which analyzes national and international charitable organizations for the advice and protection of contributors and philanthropic agencies, founded in 1918. Chairman: Eli Whitney Debevoise. Executive Director: D. Paul Reed. Headquarters: 205 East 42 Street, New York 17, New York.

**International Education, Institute of**, a nonmembership organization, founded in 1919 to increase international understanding through interchange of students, arranging tours for foreign lecturers, teacher and librarian exchanges, and publication of books, pamphlets and a *News Bulletin*. The Institute serves as a general clearing house of information in its field. Director: Stephen Dugan. Assistant Director: Edgar J. Fisher. Headquarters: 2 West 46th Street, New York 19, New York. For the academic

year 1946-47, about nine hundred fellowships and scholarships were awarded for study at United States colleges and universities. With the end of World War II the European student exchanges with Czechoslovakia, France, Italy, and Switzerland under the auspices of the Institute of International Education have been resumed. Other European exchanges will be reopened as soon as possible. The placement of students from the Near and Middle Eastern countries, and from the Philippines has increased greatly. The Institute's work in the field of Inter-American cultural relations has continued to expand as in the years since 1939. Of particular importance was a Conference on Foreign Student Problems and Policies, called by the Institute in cooperation with the Department of State. It met in Chicago, April 29, 30, and May 1, 1946, and was attended by two hundred college and university administrators and foreign student advisers. Assistance has also been rendered to displaced foreign scholars and to refugee and stranded students.

**Investment Bankers Association of America**, organized in 1912 to serve investment bankers through mutual cooperation, maintenance of high standards of service, self-regulation, and support of appropriate legislation. Membership: Main office, 700; Branch office, 788. Secretary: Robert Stevenson, 3rd. Headquarters: 33 South Clark Street, Chicago 3.

**Iron and Steel Institute, American**, founded in 1908 to promote the interests of the industry. Membership: about 2,000. President: Walter S. Tower. Secretary: G. S. Rose. Headquarters: 350 Fifth Avenue, New York 1, New York.

**Izaak Walton League of America, Inc.**, was founded January 14, 1922, to preserve, restore, and use wisely America's renewable natural resources—soil, waters, forests, and wildlife. The League operates on a local, state, and national scale through chapters, state divisions, and a national headquarters. Membership: Over 400 chapters in 40 states. National President: Tom Wallace. National Vice Presidents: C. M. Bryant, Dr. David B. Charlton, Walter Frye, and Dr. Lewis Raddcliffe. National Secretary: Mort D. Tinker. National Treasurer: Judge Harry D. Jewell. National Executive Board: Dr. George B. Eusterman (Chairman); Dr. W. B. Holton (Vice Chairman); Paul Chandler, L. H. Dunten, Dr. C. C. Lillibridge, William H. Pringle, Dr. John W. Scott, Arthur F. Senior, and Carl Wevgandt. Headquarters: 31 North State Street, Chicago 2, Illinois. The Annual Convention is held in March each year in Chicago.

**Jewish Women, National Council of**, founded in Chicago in 1893, conducts a program of education and action in social legislation, social welfare, overseas service, international relations and peace, and contemporary Jewish affairs. Membership: 65,000 in 200 Senior, 65 Junior, and 35 Councilette Sections throughout the United States. President: Mrs. Joseph M. Welt. Recording Secretary: Mrs. Simon Sobeloff. Executive Director: Mrs. Elsie Eifenben. Headquarters: 1819 Broadway, New York 23, New York. During 1946, a greatly-expanded Overseas Service Section implemented four projects designed to assist European Jews. These services included: (a) Opening of a home for unattached Jewish girls in Athens, Greece, and preparations for opening a similar home in Paris, France; (b) Establishment of a number of social work scholarships for European women who will be brought here for one or two years of study, then return to their own countries for greater social reconstruction work. The first of these recipients, women from Holland, France, and Tunis, are already here; (c) Maintenance of four trained social workers in displaced persons camps in Europe, working jointly with the Joint Distribution Committee; (d) Initiation of a Ship A-Box program for Jewish war orphans in Europe and China.

**Joint Distribution Committee, Inc., American Jewish (J.D.C.)**, founded during the first World War to give emergency and constructive aid to needy Jews overseas. Membership: 7,500 in the national council. Chairman: Edward M. M. Warburg. Executive Vice-Chairman: Dr. Joseph C. Hyman. Secretary: Moses A. Leavitt. Headquarters: 270 Madison Avenue, New York 16, New York. In 1946 the J.D.C. appropriated over \$55,000,000 to provide relief and rehabilitation and other assistance to upwards of 1,000,000 Jews in nearly fifty countries throughout the world including almost every country of Europe. It supplied food, clothing, medical aid, child care, vocational training, economic assistance, cultural aid, religious help and emigration assistance. In the United States J.D.C. received its funds through the \$100,000,000 United Jewish Appeal South Africa, Canada, Australia, Brazil, Argentina, Mexico, Cuba and other countries also participated in J.D.C.'s world-wide relief program.

**Junior Leagues of America, Inc., Association of the**, founded in 1921, to unite the 161 Junior Leagues and through them educate their members for effective volunteer service in community agencies and for shaping welfare and cultural programs. Membership: 44,000. President: Mrs. Ralph J. Jones. Executive Secretary: Mrs. C. H. L. Pennock. Headquarters: Hotel Waldorf-Astoria, New York 22, New York.

**Just and Durable Peace, Commission on a**, formed in De-

cember, 1940, to clarify the mind of Christian churches regarding the spiritual, moral, and economic foundations of an enduring peace. Membership: 100. Chairman: John Foster Dulles. Secretaries: Dr. Walter W. Van Kirk and Reverend Richard M. Flagley. Headquarters: 297 Fourth Avenue, New York 10, New York. Activities in 1946 included the preparation of a statement of postwar objectives for the Federal Council of Churches, adopted in March, 1946, under the title *Churches and World Order*, and the preparation for the Federal Committee of an analysis of Soviet Western tensions, entitled *Statement on Soviet-American Relations*.

**Kindergarten Association, National**, founded in 1909 to help secure the advantages of kindergarten education for all the nation's children. Membership varies from 2,245 to 8,000. President: Mai Bradley Martin. Executive Secretary: Bessie Locke. Editor: Florence Jane Owens. Headquarters: 8 West 40th Street, New York 18, New York. The Association daily gave advice to applicants who wished a class opened in a public school, furnished many hundreds of thousands of free leaflets on kindergarten values, and loaned prepared programs, supplementary material, and the film: *A Day in the Kindergarten*. In 1946, legislative campaign procedure for 1946 and 1947 went forward, effort being made to arouse among leaders of state organizations an interest that would culminate in securing better kindergarten laws. As a result of other work done by the Association in 1946, 1,800 children were enrolled in new kindergartens, bringing the total since 1909 to over 1,349,000 children. Weekly Home Education Articles, dealing with child behavior problems, were furnished free to the press and to Home Demonstration Agents; the combined circulation of the periodicals printing them is over 35,630,000.

**King's Daughters and Sons, International Order of the**, founded 1886, 144 East 37th Street, New York 16, New York. Miss Kate C. Hall, Executive Secretary. Membership: individual, approximately 60,000; Circles, Unit organization, approximately 2,500. Purpose and Activities: To develop spiritual life and stimulate Christian activities. The Order maintains homes for the aged, for children, summer camps, hospitals and other welfare institutions. It carries on educational activities. Periodical: *The Silver Cross*, monthly, except July and August. Price \$1.00 per year. Expansion: Educational program through Summer School under direction New York University college credits through Scholarships from Branches.

**Kiwanis International**, founded at Detroit in 1915 to develop a closer relationship between leaders of business, industry, the professions, and agriculture, and for civic, social, and welfare service to their respective communities. Membership: 170,000 in 2,550 clubs throughout the United States, Canada, and Alaska. President: J. N. Emerson, Pullman, Washington. Secretary: O. E. Peterson, Chicago, Illinois. General Office: 520 North Michigan Avenue, Chicago 11, Illinois. Club activities include participation in public affairs, service to underprivileged children, work among boys and girls, fostering closer rural-urban relationships, support of churches in their spiritual aims, promotion of soil conservation, encouragement of better business standards, assistance to returning veterans, and aid in postwar reconversion. The motto of Kiwanis is "We Build," while the 1947 theme is "Build for Peace—Patriotism—Opportunity." The 1947 Convention will be held at Chicago, June 29 to July 3.

**Knights of Columbus**, a fraternal benefit society founded in 1882. Membership: 625,000. Supreme Knight: John E. Swift. Supreme Secretary: Joseph F. Lamb. Headquarters: P. O. Drawer 1670, New Haven 7, Connecticut.

**Knights of Pythias**, a fraternal organization founded in 1864. Membership: 800,000. Supreme Chancellor: Willard M. Kent, Ithaca, New York. Supreme Keeper of Records & Seal: M. M. Ewen, 1054 Midland Bank Building, Minneapolis 1, Minnesota. The Supreme Lodge meets biennially, the next meeting to be in Milwaukee, Wisconsin, August, 1948.

**Labor, American Federation of**, founded November 15, 1881, a federation of national and international unions; state federations of labor, city central bodies; affiliated local unions; departments; and councils of unions employed in overall industries. Its purpose is the advancement of workers' interests economically, politically, and socially. Dues-paying-membership as of August 1946, 7,123,943. President: William Green. Secretary: Treasurer: George Meany. Headquarters: A. F. of L. Building, 901 Massachusetts Avenue, N.W., Washington 1, D.C.

**Law Institute, The American**, founded in 1923 to promote the clarification and simplification of the law and its better adaption to social needs, to secure the better administration of justice, and to encourage and carry on scholarly and scientific legal work. Membership: 850. President: George Wharton Pepper. Director: William Draper Lewis. Headquarters: 3400 Chestnut Street, Philadelphia 4, Pennsylvania.

**Legal Aid Organizations, National Association of**, founded in 1921 as a central body representing organizations engaged in rendering legal aid service to promote the work and to cooperate with the judiciary, the bar, and

all organizations interested in the administration of justice. Membership: 59 organizations. Honorary President: Hon. Frederick M. Vinson. President: Murray Seasongood. Secretary: Emery A. Brownell. Headquarters: 25 Exchange Street, Rochester 4, New York. Emphasis of the work in 1946 was on providing legal aid and referral service to returning veterans. Member organizations supplement Army and Navy Legal Assistance offices. Over 46,000 cases for servicemen and veterans were handled by them during the year. The Association collaborates with the American Bar Association in the establishment of needed legal aid facilities in cities which are without such service. Publications include: *Committee Reports and Proceedings*, *Annual Directory*, and the *NALAO Brief Case*.

**Legion of Decency, National**, founded in 1934 to review and evaluate morally, current entertainment feature motion pictures and to encourage wholesome standards of morality and decency in the cinema. The Motion Picture Department of the International Federation of Catholic Alumnae is the reviewing group for the Legion of Decency. Membership of the Episcopal Committee on Motion Pictures: 5. Executive Secretary: The Very Rev. Monsignor John J. McClafferty. Assistant Executive Secretaries: The Rev. Brendan Larnen, O.P., The Rev. Patrick J. Masterson. Chairman, Motion Picture Department, I.F.C.A.: Mrs. James F. Loomam. Headquarters: 35 East 51 Street, New York 22, New York.

**Library Association, American (A.L.A.)**, founded in 1876 to provide complete and adequate library coverage for the United States and Canada. Membership: 15,000. President: Mary U. Rothrock. Executive Secretary: Carl H. Milam. Headquarters: 50 East Huron Street, Chicago 11, Illinois. International Relations Office: Library of Congress Annex, Washington, D.C. Director: Harry M. Lydenberg. National Relations Office: 1709 M Street, N.W., Washington 6, D.C. Director: Paul Howard. Among the major accomplishments of the year were the introduction in Congress of the Public Library Service Demonstration Bill (Hill-Douglas Bill HR 5742, 81920), final approval by the War Assets Administration of transfer of surplus army libraries to the states; completion by a board of specialists of the *National Plan for Library Service*, to be published soon; the announcement of new standards of salary and tenure for library employees; increased participation in international cultural affairs including surveys of library service in occupied Germany, an official observer sent to Japan to help plan reeducation; and active participation in the planning of UNESCO. The first annual A.L.A. conference since 1942 was held in Buffalo, New York, June 16-22, 1946, and drew an attendance of 2,500. Public Library Trustees cited for outstanding service were James J. Weadock of Lima, Ohio, and Mrs. Myrtle J. Price of Tuscaloosa, Alabama. The Newbery Medal went to Lois Lenski for *Strawberry Girl*, the Caldecott Medal to Maud and Miska Petersham for *The Rooster Crows*.

**Library Association, Inc., The Home and School**, founded in 1938 and incorporated February 10, 1940, as a non-profit organization to aid educationally rural mountain schools, libraries, and individuals; and to foster a much better appreciation for things American and the traditional American way of life as well as a better interest in good books. Membership: 5. Treasurer: Hon. Leer Buckley. Executive Secretary: Paul J. Hines. Headquarters: Central Bank Building, Lexington 3, Kentucky. During 1946, good books and magazines were methodically circulated among schools and individuals in Kentucky and adjacent states south of Kentucky. Annual Meetings are held the first Monday in April, in Lexington, Kentucky.

**Library Association, The**, founded in 1877 (incorporated by Royal Charter in 1898) to unite all persons engaged or interested in libraries, hold examinations and maintain a professional register, promote the establishment of public libraries, encourage bibliographical study, publish journals, and hold conferences. Membership: 6,500. President: R. J. Gordon. Secretary: P. S. J. Welsford. Headquarters: Chaucer House, Malet Place, London, WC 1, England.

**Lions Clubs, International Association of**, founded in 1917 as an international association of Lions Clubs, composed of business and professional men interested in the development of their communities. Membership: 810,000, in 5,700 clubs located in 18 countries; namely: Bermuda, British Honduras; Canada; China; Colombia; Costa Rica; Cuba; Curacao, N.W.I.; Ecuador; El Salvador; Guatemala, Honduras; Mexico; Nicaragua; Panama; Peru; the United States; and Venezuela. President: Clifford D. Pierce. Secretary-General: Melvin Jones. Headquarters: 332 South Michigan Avenue, Chicago 4, Illinois. The activities of the Association have eight classifications: boys and girls; citizenship and patriotism; civic improvements; community betterment; education; health and welfare; safety; sight conservation and blind. From May 1, 1945, to April 30, 1946, 81,516 separate activities were reported by Lions Clubs. The official publications of the organization are the *Lion Magazine* and *El León* (Spanish), both issued monthly.

**Management Association, Inc., American**, an organization of more than 9,000 companies and individual executives, in all industries, interested in the practical solution of current management problems and development of the science of management in personnel and industrial relations, marketing, insurance, finance, office administration, packaging, and production by a broad exchange of information and experience through conferences, publications, and research. During the year 1945-1946 AMA held eleven conferences with a total attendance of 8,880 persons, published more than seventy-five reports, pamphlets and research studies including *The Management Review* (monthly) and *Personnel* (bi-monthly), the equivalent of fifteen or sixteen standard size books. President: Alvin E. Dodd. Chairman of the Board: John M. Hancock. Secretary: Henry J. Howlett. Editor: James O. Rice. Headquarters: 330 West 42nd Street, New York 18, New York.

**Manufacturers, The National Association of (N.A.M.)**, reached its fifty-first anniversary January 22, 1946. Today the National Association of Manufacturers has more than 15,000 active members and approximately 1,500 co-operating members. Affiliated with the Association is the National Industrial Council, a federation of some 350 national, State, and local associations of employers. The Association is governed by a board of directors of 143 members which meets nine times a year. Approximately two thousand executives, representing industries, large and small, in all parts of the United States, serve on standing committees and special committees of the Association and meet time and again throughout the year to reconcile geographical and industrial differences on every subject of general interest to industry. Once every four years, when national presidential elections are held, the Association presents to the major political parties organized industry's recommendations as to the principles required for solution of major national problems. In December of each year is held the Congress of American Industry, bringing together several thousand manufacturers for conference upon major national and industrial problems and for discussion of their own major responsibilities and opportunities. Besides this annual Congress of American Industry, the association each year holds numerous regional meetings in different parts of the United States, for the purpose of bringing together its members in different sections. The Association has been, and is, actively engaged in studying problems connected with the prevention or control of inflation, government finance, international economic relations, industrial relations, taxation, and the termination of war controls. In advancing the interests of its members, the Association operates through eight departments. It has a Government Finance Department, which operates in connection with government spending and tax committees. The Industrial Relations Department operates through committees on industrial-relations policy, labor legislation, supervisory relations, etc. The Social Security Department deals with problems involved in the national Social Security Act. The Public Relations Department handles the public-relations phases of the Association's work. One of the most important functions of the National Association of Manufacturers is its service as industry's interpreter to the public. To reach the public, the Association uses every available medium—radio, newspapers, motion pictures, advertising, and booklets. It has committees promoting cooperation with farmers, with clergymen, with educators, and with leaders of women's clubs throughout the country, endeavoring thus to bring about a greater understanding of industrial problems and viewpoints. The Research Department supplies information for all of the Association's committees, departments, and officers, and makes special studies of many important problems. The Law Department serves primarily as a legal adviser to the Association, its officers, committees, and board of directors. Through its *Law Digest* and other publications, the Law Department gives to members a review and analysis of new laws, regulations, and decisions affecting industry. The Member Relations Division, comprising four units, deals with all aspects of relations between the Association and its members at both the national and local level. The Patents and Research Department deals with problems involved in patent legislation. Headquarters: 14 West 49 Street, New York 20, New York; it also maintains offices in Washington, San Francisco, and Los Angeles; in addition, regional offices are maintained in the following cities: Chicago, Illinois; Dallas, Texas; Denver, Colorado; Atlanta, Georgia; St. Louis, Missouri; Philadelphia, Pennsylvania; Portland, Oregon; and Seattle, Washington. Chairman of the Executive Committee: Robert M. Gaylord. Chairman of the Board: Ira Mosher. President: Robert R. Wason. Executive Vice President: Walter B. Welsenburger. Secretary: Noel Sargent. Treasurer: Kenneth R. Miller.

**Mathematical Society, American**, founded in 1888 for the promotion and publication of research in mathematics. Membership: 3,100. President: Einar Hille. Secretary: J. R. Kline. Headquarters: Low Memorial Library, Columbia University, New York 27, New York. A normal schedule of meetings was maintained for 1946. This included sectional meetings in New York, New York, in

February and April, in Princeton, New Jersey, in November, in Chicago, Illinois, in April, in Ames, Iowa, in November, in Los Angeles, California, in November, a Summer Meeting at Cornell University and an Annual Meeting at Swarthmore College. The Policy Committee for Mathematics, representing the American Mathematical Society, the Association for Symbolic Logic and the Institute of Mathematical Statistics studied problems which confronted the mathematicians in their relation to other sciences and the national welfare during the postwar period. Meetings already scheduled for 1947 are New York, New York, in February, April and October, Chicago, Illinois, in April; far west in April, Summer Meeting at Yale University; Annual Meeting at University of Georgia.

**Mayors, United States Conference of**, founded in 1932 as a clearinghouse for American cities on problems of municipal government. Membership: 250 cities over 50,000 in population. President. Mayor Edward J. Kelly Executive Director: Paul V. Betters. Headquarters. 730 Jackson Place, Washington 6, D. C.

**Mediaeval Academy of America**, founded in 1925 to conduct, encourage, and support research publication, and instruction in mediaeval record, languages, literature, arts, archaeology, history, philosophy, science, and all other aspects of mediaeval civilization. Membership: 1,100 President George R. Coffman. Executive Secretary. Charles R. D. Miller. Headquarters. 1430 Massachusetts Avenue, Cambridge 38, Massachusetts. The Haskins Medal, offered annually for a distinguished publication in the field of mediaeval studies, was awarded in 1946 to Jonathan Burke Severs for his book, *The Literary Relationships of Chaucer's Clerk's Tale*. Two volumes concerned with the Middle Ages were published in 1946. *Speculum*, the journal of the Academy, is published quarterly.

**Medical Association, Canadian**, founded in 1867 and interested in all matters concerning the practice of medicine. Membership: 8,000 President. Wallace Wilson, M.D., Vancouver General Secretary. T. C. Routley, M.D. Headquarters. 135 Saint Clair Avenue West, Toronto 5, Ontario.

**Mental Hygiene, Inc., The National Committee for**, founded in 1909 to promote interest and action throughout the United States in the prevention and control of mental illness and the conservation of mental health. Elected membership: over 700 Medical Director. Dr. George S. Stevenson Headquarters. 1790 Broadway, New York 19, New York.

**Metals, American Society for**, an organization devoted to the promotion of the arts and sciences connected with either the manufacture or the treatment of metals. Membership. 19,912 President: A. L. Bougehold Secretary: W. H. Eisenman Headquarters. 7301 Euclid Ave., Cleveland 3, Ohio. Twenty Eighth National Metal Congress and Exposition, Atlantic City, New Jersey, November 18 to 22, 1946. Fifth Western Metal Congress and Exposition, Oakland, California, March 22 to 27, 1947.

**Meteorological Society, American**, founded in 1919 for the development and dissemination of knowledge of meteorology in all its phases and applications, and the advancement of its professional ideals. Membership. 2,700. Executive Secretary. Kenneth C. Spengler Headquarters: 5 Joy Street, Boston 8, Massachusetts. The Society publishes the *Bulletin*, *Journal of Meteorology* and *Meteorological Monographs*.

**Mineralogical Society of America**, founded in 1920 for the advancement of mineralogy, crystallography, petrology, and allied sciences. Membership. about 1,000 President: Paul F. Kerr, Columbia University, New York 27, New York. Secretary. C. S. Hurlbut, Jr. Headquarters. Harvard University, Cambridge 38, Massachusetts.

**Mining and Metallurgical Engineers, American Institute of**, founded in 1871 to promote the arts and sciences connected with the production of useful minerals and metals and the welfare of those employed in these industries. Membership. 15,000 President. Clyde E. Williams Secretary. A. B. Parsons Headquarters. 29 West 39th Street, New York 18, New York.

In 1946 the William Lawrence Saunders Gold Medal was awarded to Fred Searls, Jr., the Anthony F. Lucas Medal to James Ogier Lewis; the J. E. Johnson, Jr. Award to John J. Alexander.

**Mission to Lepers, Inc., American**, organized in 1906, incorporated in 1920, to aid and preach the Gospel to people suffering from leprosy and to encourage their segregation, care, and medical treatment throughout the world. Membership. 60,000 President. Dr. Wm. Jay Schieffelin, General Secretary: Dr. E. R. Kellersberger Associate Secretary. Raymond P. Currier Headquarters. 156 Fifth Avenue, New York 10, New York. During 1946 the General Secretary made a world trip of observation, visiting sixty-six leprosaria in fourteen countries, with special emphasis on a training and prevention program in the Congo and in Ethiopia.

**Modern Language Association of America (M.L.A.)**, organized in 1883 to promote literary and linguistic research in all the fields of the Modern Languages and Literatures.

Membership: 4,300. President: Ernest Hatch Milkins. Secretary: Percy W. Long. Headquarters: 100 Washington Square, New York 8, New York.

**Moose, Loyal Order of (Supreme Lodge of the World)**, a fraternal organization founded in 1888. Membership. 769,297. Director-General: Hon. James J. Davis. Supreme Governor. Leo W. Ryan. Supreme Secretary. Malcolm R. Giles. Headquarters. Mooseheart, Illinois.

**Municipal Association, American**, the national federation of the State Leagues of Municipalities, founded in 1924. It carries on activities designed to assist member leagues in their work of serving and representing their member municipalities. Membership. 41 State Leagues, representing 9,000 cities and towns. President. R. E. Riley, Mayor, Portland, Oregon. Executive Director. Earl D. Mallory. Headquarters. 1313 East 60 Street, Chicago 37, Illinois. The Association provides a consulting service on special phases of municipal government, and keeps its members informed of Federal legislation affecting municipal government; it represents the interests of municipalities nationally, in much the same way that the State leagues represent municipalities before the State governments.

**Municipal League, National**, a nonprofit citizen organization founded in 1894 and serving as a national clearinghouse for information on local government improvement, through the preparation of model laws, and administrative systems and cooperation with local civic organizations. Membership. 2,000 President. Hon. Charles Edison. Executive Secretary. Alfred Willoughby. Headquarters. 299 Broadway, New York 7, New York. Publications. *National Municipal Review*, published monthly, except August, and various books, pamphlets, and reports. Annual conference on government was held in November, 1946, in Philadelphia in observance of 50th anniversary of founding. Special publications in 1946 were *The American County—Patchwork of Boards*, *Model State Constitution* (revised), *A Model State Civil Service Law* (revised), and *Model Accrual Budget Law*.

**Museums, American Association of**, founded in 1906 to help museums solve their problems and increase their usefulness. Membership. 1,100 President. David E. Finley. Director. Laurence Vail Coleman Headquarters. Smithsonian Institution, Washington 25, D. C. The Association has two major functions—long range work that shapes broadly the courses of museum development, and direct and immediate usefulness to museums. The former program was advanced during 1946 through a study of museum buildings. A book on this subject is planned as a contribution to the anticipated postwar building of museums in many cities. The Association's program of direct service is being carried forward as usual through serial publications and consulting work. The Association publishes *The Museum News*, a bi-weekly paper devoted to news of the museum world, which completed its 23rd volume in 1946.

**Music Clubs, National Federation of**, founded in 1898 for the purpose of "bringing into working relation with one another music clubs and individuals directly or indirectly associated with musical activity for the purposes of aiding and encouraging musical standards throughout America." Membership. about 500,000 members in 5,000 clubs. President. Mrs. Guy Patterson Gannett Secretary. Mrs. H. Carroll Day. Publications and Business Office. 113 East Green Street, Ithaca, New York. New York Headquarters office. 455 W. 23rd Street, New York 11, New York. During the war the Federation outfitted all hospital ships and trains, carrying American wounded, with records, phonographs, and musical kits. Its gifts of musical equipment for the armed forces in this country and abroad total two and a half million articles. Through an active "Music in Hospitals" program inaugurated in 1944 in cooperation with the American Red Cross, the organization not only has trained scores of highly-skilled performers to take ward music into the army and navy hospitals throughout the country, but has now taken over a similar program in Veterans Facilities. It is providing musical instruments for these hospitals, and in most instances, keeping them in repair. It has made substantial gifts of musical equipment to orchestral groups overseas as a part of its combined War Service Extension and International Music Relations program. This work is being continued with the armies of occupation. Its Biennial Young Artists Auditions, for which four prizes of \$1,000 each are offered, are continuing with the next scheduled for the spring of 1947. Annual Young Composers Contests are held with a top prize of \$150 and several smaller prizes. An intensified American Composition program has been started, a feature of which is the distribution of monthly lists of reviews of all new American works in the serious music field to federated clubs, schools, and libraries. The Federation is making an annual selection of works of American composers which its Orchestras Committee recommends to leading conductors for inclusion in their programs. The Federation publishes the *Music Clubs Magazine* issued bi-monthly September to June.

**Music Council, Inc., National**, organized April, 1940, to provide a forum for the discussion of problems affecting

national musical life, to speak with one voice for music in the United States when this is desirable, to provide for an interchange of musical information, to encourage coordination of effort among musical organizations, to conduct surveys, to encourage the development of music and to foster the highest ethical standards in it. Membership: limited to nationally active musical associations; now numbers 41 such associations, with individual membership of over 600,000. President: Howard Hanson, Executive Secretary: Edwin Hughes. Headquarters: 838 West 89th Street, New York 24, New York. The Council publishes in its *Bulletin* digests of proposed and enacted national legislation affecting music, source information on musical activities in various departments and agencies of the Federal Government, lists of musical contests and competitions, annual surveys of the programs of the major symphony orchestras of the United States, other surveys of national musical activities, information as to the use of music in industry, in hospitals, and in various other fields which affect the national music picture, and news of the activities of its member organizations. The Council made and published the first nation-wide survey of the *Use of Music in Hospitals for Mental and Nervous Diseases*, now in its third printing. The Council was designated by the State Department as the only musical organization among the fifty national associations invited to send representatives to the National Commission for the United Nations Educational, Scientific and Cultural Organization. The Council is represented on the Music Advisory Committee of the Division of Cultural Relations in the State Department. The annual meeting is held in May, and general sessions of the Council are called during each year as occasion demands.

**Music Education League, Inc., The**, founded in January, 1923, as a non-profit organization to aid in developing in the young the qualities of character and culture generally considered most necessary for the individual's happiness and welfare, and for his usefulness to society, through a carefully planned and intelligently employed program of music education. All teachers and students participating in the auditions are members, which brings the membership total for the past 23 years to more than 250,000. President and Acting Treasurer: Isabel Lowden (Founder). Secretary: J. Vincent O'Connor. General Chairman of Auditions: T. Tertius Noble. Auditions Chairman for Public Schools: Dr. George H. Gartlan. Chairmen for Catholic Schools: Norman A. McCulloch and Rev. John W. Ziemak. Headquarters: 119 West 57th Street, New York 19, New York. During 1946, fifty-seven sessions of auditions for piano, strings, and for school choruses, orchestras and bands, and for vocal soloists were held between March 1 and May 30, including finals for vocal and instrumental groups at Town Hall, May 21-24. At the Town Hall concert, April 24, the piano concerto winner was Laura Fortune King, and the lyric soprano winner, Carmen Abel. The prize for winners of these classes is always a performance with symphony orchestra at Town Hall. The Town Hall Concert, September 22, presented winners of all ages of the 1945-1946 season, followed by presentation of certificates and pins to all soloists and members of small ensembles entered in the 1945-46 season, while cups and certificates were the awards presented to large school groups. During 1947, auditions for soloists will be held in New York City; Glen Cove, Long Island, New York; Danbury, Connecticut; Mineola, Long Island, New York; New Rochelle, New York, and possibly in Yonkers, New York. For school groups, preliminaries will be held in New York City and in Philadelphia, Pennsylvania. Final events for all classes will be held in New York City, between May 1 and May 30—the final for soloists in the Steinway Music Salon, and for school groups, in Town Hall.

**Musicians of United States and Canada, American Federation of**, was founded in October, 1896, to improve working conditions of organized musicians. Membership: Over 150,000. President: James C. Petrillo. Vice President: Charles L. Bagley. Secretary: Leo Cluesmann. Treasurer: Thomas F. Gamble. Headquarters: Secretary's office, 39 Division Street, Newark 2, New Jersey. The Federation will hold a convention during the first week in June, 1947.

**National Guard Association of the United States**, founded in 1878 to advance the interests of the National Guard, improve its armament, equipment, and training for the greater security of the nation. Membership includes the entire complement of officers of the National Guard in each state and territory, totaling about 250,000. President: Maj. Gen. Ellard A. Walsh. State Capitol, St. Paul, Minn. Secretary: Brig. Gen. Fred M. Waterbury, 70 East 45 Street, New York 17, New York.

**Nature Association, American**, founded in 1922 to stimulate public interest in every phase of Nature and the out-of-doors, and to further the practical conservation of the great natural resources of America. Membership: 82,000. President: Richard W. Westwood. Secretary: James A. O'Hearn. Headquarters: 1214 16th Street, N.W., Washington, D. C. Official organ of the Association is *Nature Magazine*.

**Near East Foundation**, an organization founded in Feb-

ruary, 1930, for humanitarian and welfare activities in the countries of the Near East. Membership: 50,000. President: Cleveland E. Dodge. Executive Secretary: Edward C. Miller. Headquarters: 17 West 46 Street, New York 19, New York. The Foundation is actively engaged in war relief work in the Near East. From 1940 through June 1946 it collected a total of \$2,574,784.96. The beneficiaries of this money will be the unfortunate war victims in Greece, Syria, Cyprus, Iran and Lebanon.

**Netherlands-America Foundation, Inc.**, founded in 1921 to deepen understanding and friendship between the Netherlands and the United States through educational and cultural channels. Membership: 419. Honorary President: Thomas J. Watson. President: Peter Grimm. Secretary: Charles P. Luckey. Executive Secretary: Thomas E. Freeman. Headquarters: 10 Rockefeller Plaza, New York 20, New York. The Annual Meeting is held the third Monday in January. The most important project at the present time is to procure scholarships which will enable Dutch students to come to this country and study in our colleges and universities. Reception in honor of Dr. Elco N. van Kleffens, the Netherlands Delegate to the Security Council, United Nations, and Mme. van Kleffens was held on Friday, May 10 in the New Amsterdam Room of 10 Rockefeller Plaza.

**New Education Fellowship, The**, founded in 1915 to promote the unity of educators throughout the world, is interested in progressive education. Chairman: Dr. Laurin Zilliacus. Teachers College, Columbia University, New York. Secretary: Miss Clare Soper. International Headquarters: 1 Park Crescent, London, W 1, England. In 1946 International Book Club was started—a plan by which educators in various countries can receive books published by N.E.F. (Subscription \$4.50 a year). The Fellowship published series of monographs on new plans in education in liberated countries, held a European conference in Paris, August, 1946, and sent an international delegation of speakers to Australia to hold conferences in all capital cities. In 1947 it plans workshops on International Relations, at Easter and in Summer, in England.

**Newspaper Publishers Association, American**, founded in 1887 to foster and protect the interest of the newspaper publishing business. Membership: 760. President: William G. Chandler. General Manager: Cranston Williams. Headquarters: 370 Lexington Avenue, New York 17, New York. The 1947 meeting will be held in New York City at the Hotel Waldorf-Astoria April 22-24, 1947.

**Numismatic Society, The American**, founded in 1858 for the collection, preservation, and study of coins, medals, and decorations of all countries. Membership: 507. President: Dr. Herbert E. Ives. Secretary and Curator: Sydney P. Noe. Headquarters: Museum at Broadway and 156 Street, New York 32, New York. Meetings are held at the Museum on the second Saturday in January, April, and November.

**Nutrition Foundation, Inc., The**, organized in December, 1941, to develop and apply the science of nutrition as a basic science of public health. Membership: 51. Chairman of the Board: Karl T. Compton. President: George A. Sloan. Scientific Director: Charles Glen King. Executive Secretary: Ole Salthe. Headquarters: Chrysler Building, New York 17, New York. From May, 1942, when the initial grants were made, to June 30, 1946, the Foundation appropriated \$1,209,455 for 125 studies in the science of nutrition at 49 leading universities and hospitals. The Foundation publishes *Nutrition Reviews*, a monthly journal providing an unbiased review of the world's current research literature in the field of nutrition. The Foundation also publishes *Nutricion*, a Spanish edition of *Nutrition Reviews*, in the interests of medical and public health education in the Spanish-speaking Americas, and in the promotion of cultural relations. The Foundation publishes annually a *Report of the Scientific Director*, of which copies are available upon request.

**Occupational Therapy Association, American**, founded in 1917 to promote the use of occupational therapy; and for education, training, research, and other activities advantageous to the profession. Membership: 2,500. President: Mrs. Winifred Kahmann. O.T.R. Treasurer: Holland Hudson. Executive Secretary: Mrs. Meta R. Cobb. Headquarters: 33 West 42nd Street, New York 18, New York.

**Odd Fellows, Independent Order of**, a fraternal organization founded in 1819. Membership: 1,442,813. Sovereign Grand Master: C. A. Wheeler. Sovereign Grand Secretary: Edw. G. Ludvigsen. Headquarters: 16 West Chase Street, Baltimore 1, Maryland. The 1947 meeting will be held in Winnipeg, Manitoba, Canada.

**Oriental Society, American**, founded in 1842 for the promotion of research in oriental languages and cultures and the publication of books and papers. Membership: 831. President: L. Carrington Goodrich. Secretary: Ferris J. Stephens. Yale University, New Haven, Conn.

**Ornithologists' Union, The American**, founded in 1883 for the advancement of ornithological science, publication of a journal and other works. Membership: about 1,800. President: Hoyes Lloyd Secretary: Lawrence E. Hicks. Ohio State University, Columbus, Ohio. The 1946 meeting was held in Urbana and Champaign, Ill., Sept. 2-6, 1946.

**Ort Federation, American**, founded in 1880 and devoted to the creation of a new occupational existence for refugees and the masses of European Jews through trade schools, farm colonies, and industrial workshops. President: George Backer. Chairman of the Board of Directors: Louis B. Boudin. Treasurer: Joseph Weinberg. Chairman of the Executive Committee: Murray Levine. Headquarters: 212 Fifth Avenue, New York 10, New York.

**Ort, Women's American**, a national organization, founded in 1927, as a constituent body of the American Ort Federation, which is part of the World Ort Union (headquarters: Geneva, Switzerland), whose purpose is the promotion of technical trades and agriculture among Jewry in vocational trade schools, agricultural colonies, cooperatives, and workshops. For over sixty-six years the Ort (Organization for Rehabilitation through Training) has trained the dislocated and the underprivileged for integration into the economic scheme of their native lands, or for emigration to Palestine, the Americas, etc.

Membership approximately 20,000. Effective expansion has resulted in the formation of regional groups in the New York Metropolitan Area, Connecticut, New Jersey, Pennsylvania, the Midwest, and the West Coast. The quota for the Guardianship Vocational Training Plan, which was launched in 1945, has doubled. President: Mrs. Maurice Finkelstein. Headquarters: 212 Fifth Avenue, New York 10, New York. Events of 1946-47 include the Convention, May 13-15, 1946, at the Hotel Biltmore. Annual Donor Luncheon at the Hotel Commodore, May 15, 1946. Exhibit at Women's International Exposition, 71st Armory, week of November 4, 1946, including Membership Rally on November 7; the Annual Regional Membership Luncheon at the Hotel Commodore, December 4, 1946. Luncheon Fashion Show at the Waldorf Astoria, January 20, 1947, and the Annual Donor Luncheon at the Hotel Commodore, May 7, 1947, all in New York City. Chapter meetings are held monthly in the fifty-five chapters, in cities throughout the United States.

**Pacific Relations, Institute of**, an unofficial and nonpartisan organization, founded in 1925 to facilitate the scientific study of the peoples of the Pacific area. Composed of autonomous, privately supported National Councils in Australia, New Zealand, China, Philippines, Canada, United States, France, Netherlands, United Kingdom, and the USSR, together with an International Secretariat. Governed by a Pacific Council composed of members appointed by each of the National Councils. Chairman: Percy E. Corbett, Yale University. Secretary: General William L. Holland. It has held international conferences at Honolulu (1925 and 1927), Kyoto, Japan (1929), Shanghai (1931), Banff, Canada (1933), Yosemite Park, California (1936), Hot Springs, Virginia (1945). Tenth Conference is scheduled to meet in England, September, 1947. Publications: numerous scholarly books in the *IPR Inquiry Series* and *International Research Series*, conference proceedings, *Pacific Affairs*, quarterly, pamphlets. International Secretariat and Publications Office: 1 East 54th Street, New York 22, New York.

**American Council, Institute of Pacific Relations, Inc.** Chairman: Robert G. Sproul, Executive Vice Chairman: Edward C. Carter. Membership: 2,000. Publications: *Far Eastern Survey*, fortnightly, numerous popular pamphlets, school texts, and scholarly books. National office: 1 East 54th Street, New York 22, New York; branch offices: 417 Market Street, San Francisco 5, California, and Dillingham Building Annex, Honolulu 16, Hawaii.

**Pan American Foundation**, founded in 1938 to promote and maintain, through nongovernmental means and agencies, the principles and policies of Pan Americanism. The foundation promotes the founding of a Pan American University, cooperates with inter-American organizations, and publishes Pan American booklets, pamphlets, and bibliographies. Director: A. Curtis Wilgus. Secretary: William A. Reid. Headquarters: 1217 Thirteenth Street, N.W., Washington 5, D.C.

**Pan American Women's Association**, founded in 1930 to promote inter-American understanding through cultural interchange. President: Frances R. Grant. Secretary: Jessie B. Adamson. Headquarters: 45 West 45 Street, New York 19, New York. During 1945 the Association held its panel luncheons on the third Saturday of each month and continued its concerts, exhibitions, and special institutes on inter-American problems.

**Peace Conference, National**, founded in 1933 with a three-fold purpose as a council board, as a clearing house, as a publishing and service agency to provide nonpartisan information on international affairs. Membership: 37 national organizations. President: Richard R. Wood; Vice-President: Jane Evans, Executive Secretary: Marian R. Emerine. Headquarters: 8 West 40 Street, New York 18, New York. The Conference holds monthly meetings of organizational leaders to discuss current problems, clarify issues, and plan programs. Recent publications of the Conference include a study pamphlet: *Pros and Cons of Universal Military Training, World Trade and World Plenty and Complete Text of the United Nations Charter*.

**P.E.N. Club**, a world association of writers, founded in

1922 in the interests of literature, freedom of artistic expression, and international good will. Membership (American Center): 805. President: Carl Carmer. Secretary: Whit Burnett. Headquarters: 123 East 94th Street, New York 28, New York. The International Federation of the P.E.N. Clubs is headed by a Presidential Board, consisting of Thornton Wilder, Dr. Hu Shih, Denis Saurat, E. M. Forster, Francois Mauriac, Ignazio Silone, and Hermon Ould.

**Pen Women, National League of America**, founded in 1897 to promote the creative, cultural arts of Pen, Pencil, and Brush. Membership: 3,652. Headquarters: 408 Willard Hotel, Washington, D.C. President: Alma Robison Higbee. The League holds a Biennial Congress on numerically even years, a Mid-administration Congress on numerically odd years; also, a Membership Roster biennially. The League publishes a monthly magazine, *The Pen Woman*. Editor: Mrs. Hildred Bridges (William L.), 7634 Summit Street, Kansas City 5, Missouri.

**People's Lobby, Inc.**, founded in 1931 (formerly the People's Reconstruction League, founded in 1920) to work for legislative and administrative measures in the interest of all the people. Membership: 4,250. President: Bishop Francis J. McConnell. Executive Secretary: Benjamin Marsh. Headquarters: 810 F Street, N.W., Washington 4, D.C. During 1946 the organization distributed about a quarter of a million reprints of its material. It worked for government retention of its war plants to be converted to peace production. It held a conference and published all addresses as pamphlets.

**Petroleum Institute, American**, founded in 1919 to afford a means of cooperation with the government, foster trade in petroleum products, promote the interests of the industry, the mutual improvement of its members, and the study of related arts and sciences. Membership: about 4,000. President: W. R. Boyd, Jr. Secretary: Lacey Walker. Headquarters: 50 West 50 Street, New York 20, New York.

**Phi Beta Kappa, United Chapters of**, founded December 5, 1776, "to recognize and encourage scholarship, friendship, and cultural interest." The constituent members are the chapters and the associations of the Society. There are 141 chapters and, in 1944-45, there were approximately fifty associations. President: Christian Sauss. Vice President: John Kirkland Clark. Executive Secretary: George A. Works. Treasurer: George Dana Graves. Assistant Secretary: Carl L. Billman. Assistant Treasurer: Levis P. Kwerel. Headquarters: 5 East 44th Street, New York 17, New York. During 1946, the Mary Isabel Sibley Fellowship in Greek was held by Helen F. North. The awards of the Phi Beta Kappa Key are made by the chapters. Meetings of the United Chapters are held triennially. The last one took place at Williamsburg, Virginia, early in September, 1946.

**Philatelic Society, American**, an organization of stamp collectors, the oldest and largest hobby organization in the world, founded in 1886. Membership: 8,150. President: Donald F. Lybarger. Executive Secretary: H. Clay Musser. Central Office, P. O. Box 800, State College, Pennsylvania. The annual meeting is usually held in August of each year.

**Philological Association, American**, founded in 1869 for the advancement and diffusion of philological knowledge, incorporated, 1937. Membership: 1,021. President: L. Arnold Post. Secretary: Howard Comfort, Haverford College, Haverford, Pennsylvania. Publications: *Transactions and Proceedings* (annual since 1870), *Philological Monographs and Special Publications*, thirteen volumes since 1931. Individual and institutional membership, \$4 annually.

**Philosophical Association, American**, founded in 1900 for the purpose of fostering the coordinated study and dissemination of philosophy in all its branches. It also establishes and maintains contacts with philosophers and philosophical associations the world over, having participated in a number of international philosophical congresses. Membership: 900. Divisions: Eastern, Western, and Pacific. Endowment: \$10,000 revolving fund received from the Carnegie Corporation for the purpose of publishing source books in the history of science. Chairman: Everett J. Nelson, University of Washington, Seattle, Washington. Secretary: Treasurer: Cornelius Kruse. Headquarters: Wesleyan University, Middletown, Connecticut.

**Physical Society, American**, founded in 1899 for the advancement and diffusion of knowledge of physics. Membership: 6,000. President-elect: Dr. L. A. DuBridge. Secretary: Dr. K. K. Darrow. Headquarters: Columbia University, New York 27, New York. The annual meeting was in January, 1946, and four other meetings were held during the year.

**Physicians, American College of**, founded in 1915 as an organization of qualified specialists in Internal Medicine and allied specialties, to maintain and advance the highest possible standards in medical education, medical practice, and clinical research; to perpetuate the history and best traditions of medicine and medical ethics; and to maintain both the dignity and efficiency of Internal

Medicine in its relation to public welfare. Membership: four Masters; four thousand six hundred Fellows; twelve hundred Associates; total: (approximately), five thousand eight hundred. President: David P. Barr, M.D., New York, New York; President-Elect: Hugh J. Morgan, M.D., Nashville, Tennessee. Executive Secretary: E. R. Loveland. Headquarters: 4200 Pine Street, Philadelphia 4, Pennsylvania. Following the conclusion of war, the College resumed its national meetings at Philadelphia with an attendance far in excess of any prewar meeting. The College has extended its program of granting Research and Clinical Fellowships, the latter especially designed to help its returning member-veterans. Also it has continued to expand its program of postgraduate and refresher courses, organized at important medical centers in various parts of the country. Other activities include investigation and certification of internists, publication of the *Annals of Internal Medicine*, holding of Regional Meetings, award of the Phillips Memorial Medal for Achievement in Internal Medicine, etc.

**Planned Parenthood Federation of America, Inc.** (formerly Birth Control Federation of America, Inc.), formed in 1939, by the merger of the American Birth Control League (1921), and the Birth Control Clinical Research Bureau (1923), to foster Planned Parenthood by making birth control information available, under medical direction, through private physicians, hospital and public health clinics, and extra-mural clinics. Special emphasis is being given to medical service for returning members of the armed forces and their wives. Couples desiring advice on infertility are referred to physicians and clinics specializing in such service. Honorary Chairman: Margaret Sanger. President: The Reverend Cornelius P. Trowbridge. National Director: Dr. Kenneth Rose. Secretary: Mrs. Walter N. Rothschild. Headquarters: 501 Madison Avenue, New York 22, New York. For activities in 1946, see BIRTH CONTROL.

**Planning and Civic Association, American**, formed in 1935 by a merger of the American Civic Association (1904) and the National Conference on City Planning (1909). It promotes public understanding and support of planning for the best use of land, water, and other natural resources, higher ideals of civic life, and safeguarding of natural wonders, scenic possessions, and recreation facilities. Membership and Subscriptions: 2,000. President: Horace M. Albright. Executive Secretary: Harlean James. Headquarters: 901 Union Trust Building, Washington 5, D.C. The Association publishes a yearbook, *American Planning and Civic Annual*, and the quarterly, *Planning and Civic Comment*. Holds annually a Citizens Planning Conference, the 1946 Conference was held in Dallas, Texas.

**Play Schools Association, Inc.**, founded in 1917, is a non-profit organization concerned with work-play programs for children of school age, after school in winter and all day in summer. The Association conducts some centers in New York City, using existing facilities and resources, and acts as consultant to private and public agencies carrying on play school activities. Nationally, it helps other groups through printed materials and field work service. Conferences, workshops, and discussion meetings are held, and publications issued, for teachers, students, and parents; interested in programs out of school, for children. The work is supported by foundations and public spirited citizens. Membership: 2,500. President: Mrs. Fred M. Stein. Vice Presidents: Mrs. Thomas J. Blake, Mrs. Walter A. Hirsch, and Mrs. David M. Levy. Secretary: Mrs. Harry E. Maule. Treasurer: Mrs. J. Edwin Goldwasser. Assistant Treasurer: Mrs. Saul Neuman. Chairman, Executive Committee: Mrs. I. H. Levy. Headquarters: 119 West 57th Street, New York 19, New York. During 1947, the Annual Conference will be held, March 29, at the Hotel Pennsylvania, New York, New York.

**Poetry Society of America, The**, was incorporated in 1910. "The purpose of the society is to secure fuller recognition for poetry as one of the important forces making for a higher civilization and to kindle a fuller and more intelligent appreciation of poetry; and especially of the work of living American poets; and to do such other acts as may be deemed necessary, or appropriate, to encourage and foster American poetry; and aid and assist American poets." Membership: about 500. President: J. Donald Adams. Vice Presidents: William Rose Benét, Sara Henderson Hay, and Margaret Widemere. Secretary: Harold Vinal. Members of the Board: Laura Benét, Amy Bonner, Gustav Davidson, Elias Lieberman, Emma Mills, Louise Townend Nicholl, Sydney King Russell, A. M. Sullivan, and Helen Frith Stickney. Headquarters: address of the Secretary, Harold Vinal, 687 Lexington Avenue, New York 22, New York. During 1946, the Annual First Prize \$100 Award went to Elda Tanasso, and the Annual Second Prize \$50 Award to Mary Sinton Leitch. The Lola Ridge Awards of \$100 and \$50 were presented to Jules Alan Wein and Sidney Shanker, respectively. Meetings are held from October to May, of each year, on the last Thursday evening of each month, 8:30 p.m., at 122 East 58th Street, New York 22, New York.

**Poets, Inc., The Academy of American**, was founded in

November, 1934, to encourage and foster the work of American poets of proven gifts and merit; and to discover new poetic genius in America. Membership: 12 voting members of the Corporation and 800 founders (all donors). President: Marie Bullock. Treasurer: Charles Hanson Towne. Secretary: Hugh Bullock. Headquarters: 1030 Fifth Avenue, New York 28, New York. Election of first Board of Chancellors for 1946, consisting of J. Donald Adams, William Rose Benét, Witter Bynner, Dr. Henry Seidel Canby, Mary Colum, Max Eastman, Dr. Frank P. Graham, Robert M. Hutchins, Robinson Jeffers, Archibald MacLeish, F. O. Matthiessen, Dr. William Allen Neilson (see NROBIOLOGY). Fellowship of \$5,000 was awarded, in April, 1946, to Edgar Lee Masters. The Annual Meeting of Members of the Corporation was held at the Corporation's headquarters on October 16, 1946.

**Polish Institute of Arts and Sciences in America**, founded in 1942 to establish permanent collaboration between Polish and American scholars, and to assure for the duration of the war the continuity of Polish research work. Membership: 89 active members; 54 corresponding members. President of the Board: Hon. Jan Kucharczyk. Director of the Institute: Prof. Oskar Halecki. Headquarters: 89 East 35 Street, New York 16, New York. Publications: *Bulletin*, published quarterly; *Polish Institute Series*. In 1944 the Midwest Branch was organized, with headquarters in Chicago where a first conference was held in 1942 and a second one in Poland cultural reconstruction in 1945. The institute has also a Canadian Branch (headquarters at McGill University, Montreal), has appointed delegates in several Latin American countries and cooperates with Polish research centers of all continents. Each of the five sections of the Institute (historical and political sciences, history of literature and of arts, law and social and economic sciences, pure and applied sciences, and educational problems) is organizing lectures of Polish and American scholars to be held at the headquarters of the Institute at least once a month. Special conferences on the history of East Central Europe, and on the role of the universities in the postwar world were organized in 1943, and a conference on the reconstruction of libraries in 1944. There also were conferences on the nutritional reconstruction of Poland, and on the history of the Polish immigration in the U.S.A. which led in October, 1944, to the foundation of the Polish-American Historical Commission, with a special publication, *Polish-American Studies*.

**Polish National Alliance of the U.S. of N.A.**, a fraternal society founded in 1880. Membership: 300,000. President: Charles Rozmarek. General Secretary: A. S. Szczepkowski. Headquarters: 1514-20 W. Division Street, Chicago 22, Illinois. A convention is held once every four years, and the subsidiary lodges (about 2,000) meet monthly.

**Political and Social Science, The American Academy of**, founded in 1889 to provide a forum for the discussion of the great political, social, and industrial problems confronting the world. Membership: 12,000. President: Dr. Ernest Minor Patterson. Secretary: Dr. J. P. Lichtenberger. Headquarters: 8457 Walnut Street, Philadelphia 4, Pennsylvania. A bi-monthly, *The Annals*, is published. The 1947 annual meeting is scheduled for Philadelphia, April 18-19.

**Political Science Association, American**, founded in 1903 to foster scholarly interest in the scientific study and improvement of politics and public law, administration, and diplomacy. Membership: 3,900. President: Walter E. Nodd. Secretary: Kenneth Colegrove. Headquarters: 1822 Sheridan Road, Northwestern University, Evanston, Illinois. The Association maintains a Personnel Service indicating the records of young scholars available for appointment. The 1946 annual meeting was held in Cleveland, Ohio, on December 27-29.

**Postmasters of the U.S., National Association of**, founded in 1898 as a purely social organization of 1st and 2nd class office postmasters, and re-organized and incorporated, in 1935, to promote the interests of the U.S. postal service and advance its high standard of efficiency and economical operation in the interests of the public, and to enhance the welfare of its members. Membership: 32,000. President: Joseph F. Conrad. 1st Vice President: Burrin C. Jackson. 2nd Vice President: Eloy T. Hedlund. 3rd Vice President: Darius Allen. 4th Vice President: Pearl E. Linville. Secretary: Treasurer: Frank J. Horak. Editor and Washington Representative: Philip J. Gallagher. National headquarters: Oconto, Wisconsin. During 1946, the Association obtained the first adjustment of pay schedules in 25 years; promoted air mail for popular use, through a campaign of education among the public; promoted an educational campaign through the public schools on postal service; and created schools of instruction (by counties) for postmasters to develop a better understanding of the multifarious duties and thousands of postal regulations, and to assist postmasters in becoming more efficient in serving the public. The 1947 meeting is to be held in Los Angeles, California.

**Press Club of America, Overseas**, was founded in April, 1939, to bring interesting ties of foreign correspondents

to the fore; to provide facilities for the expression of these interests; to promote freedom for foreign correspondents as well as freedom of the press; to encourage the highest ethics in the field; and to promote good fellowship among men and women whose past or present experiences in the service of American journalism abroad have given them common professional and social interests. Membership: 435. President: W. W. Chaplin. Vice Presidents: H. V. Kaltenborn, William Shirer, and Sonia Tomara. Secretary: Haster E. Hensell. Treasurer: Ralph J. Frantz. Headquarters: 110 West 57th Street, New York 19, New York. At the Annual Banquet, February 28, 1946, Secretary of State Byrnes, Secretary of War Patterson, Senator Brian McMahon, and Field Marshall Sir Henry Maitland Wilson were among the speakers, and awards (civilian jeeps) were given to Drew Middleton, of the New York Times, for having filed the first story out of liberated Berlin, and to Frank Bartholomew of INS, for having filed the first story from liberated Tokyo. The Club meets every Wednesday, at 12:30 p.m., at the Lotus Club, 110 West 57th Street, New York 19, New York.

**Prevention of Blindness, Inc., National Society for the**, founded in 1915, concerned with the control and, where possible, the elimination of the causes of blindness, impaired vision, and eyestrain, not with activities on behalf of those already blind. Members and Donors 38,000. President: Mason H. Bigelow. Executive Director: Mrs. Eleanor Brown Merrill. Secretary: Miss Regina E. Schneider. Headquarters: 1700 Broadway, New York 19, New York.

**Prevention of Cruelty to Animals, The American Society for the (A.S.P.C.A.)**, founded in 1866. President: Alexander S. Webb. Vice-President-Secretary: Richard Welling. Executive Vice-President: Sydney H. Coleman. Headquarters: 50 Madison Avenue, New York 10, New York. The Society maintains a shelter in each borough of New York City, in which it housed 211,955 during 1945. Its animal hospital at Avenue A and 24 Street, Manhattan, treats over 10,000 cases a year. An educational program is developed for the schools and for adults. The annual meeting was held January 3, 1946.

**Prison Association, American**, founded in 1870 to improve laws, law enforcement, and penal and correctional institutions, to study the causes of crime, and to care for and provide employment for paroled and discharged prisoners and probationers. The Association maintains a free clearinghouse of information. Membership: 1,000. General Secretary: E. R. Cass. Headquarters: 135 East 15 Street, New York 3, New York. The Annual Congress may be attended by anyone who wishes to profit thereby.

**Protection of Foreign Born, American Committee for**, founded in 1933 to promote better relations between native and foreign born by education, to combat discrimination on the ground of race, nationality, or noncitizenship; to encourage and facilitate naturalization; and to prevent the destruction of American families by deportation. It is not a membership organization, but has 400 annual contributors. Chairman: Ilon Stanley Nowak. Headquarters: 23 West 26th Street, New York 10, New York.

**Psychiatric Association, American**, founded in 1844 to further the study of mental diseases, to further psychiatric hospitals, education, and research, and to apply psychiatric knowledge to other branches of medicine, to other associations and to public welfare. Membership: 4,009. President: Dr. Samuel W. Hamilton. Executive Assistant: Austin M. Davies. Headquarters: 9 Rockefeller Plaza, New York 20, New York. The 1947 meeting is scheduled for New York City, May 19-23. See *PSYCHIATRY*.

**Psychical Research, Inc., American Society for**, incorporated in 1904 for the scientific investigation of all types of psychical phenomena. Membership: 500. President: Dr. George H. Hyslop. Secretary: Mrs. E. W. Allison. Headquarters: 40 East 34 Street, New York 16, New York.

**Public Administration, Institute of**, founded in 1906 as The Bureau of Municipal Research. The Institute's purpose is to improve the management and operation of American government through the scientific study of public administration, the development of practical ideas and improved procedures in government administration, dissemination of the results of such research to public officials and to citizens generally, and the advancement of training for the public service. Membership: 12. Chairman: Richard S. Childs. President: Luther Gulick. Headquarters: 684 Park Avenue, New York 21, New York.

**Public Affairs Committee, Inc.**, founded in 1936 to make available in summary and inexpensive form the results of research on economic and social problems to aid in the understanding and development of American policy. Chairman: Ordway Tead. Secretary: S. M. Keeny. Headquarters: 22 East 38 Street, New York 16, New York. In their tenth million, there are more than 64 current *Public Affairs Pamphlet* titles.

**Public Health Association, American**, founded in 1872 to promote and protect public and personal health. Membership: 10,600. President: Harry S. Mustard. Executive Secretary: Dr. Reginald M. Atwater. Headquarters: 1790 Broadway, New York 19, New York. The year 1946 saw

a great expansion of the Association's activities. Its administrative staff has been increased by the addition of an engineering associate. Its vocational counseling and placement service now has the full time services of a medical vocational consultant. During the year it granted the first Lasker Awards in recognition of research in relation to the diseases which are the leading causes of death, and in recognition of administrative achievement in the prevention and treatment of these diseases. The growing activities of the Association's Merit System project have resulted in the addition to the staff of a statistical analyst and a field consultant. In the accreditation program ten schools of public health have been approved for granting the degree of M.P.H. and five, the Dr. P.H. The Committee on Administrative Practice has established a Washington office for its Medical Care Subcommittee with a medical associate, technical secretary, and research associate. Its Subcommittee on Local Health Units was one of the cooperating agencies sponsoring the first National Conference on Local Health Units held in Ann Arbor in September. During the year the Association published a membership directory, its first since 1937, *Public Health—A Career with a Future*, Part II of an *Appraisal Method for Measuring the Quality of Housing*, and the 9th edition of *Standard Methods for the Examination of Water and Sewage*. Its Committee on Professional Education released reports on recommended qualifications of Health Officers, Executives of Voluntary Health Agencies, and Nutritionists. The official publication of the American Public Health Association is the *American Journal of Public Health*, now in its 36th Volume and with a circulation of more than 13,000.

**Publishers Association, Inc., National**, founded in 1919 to serve the industry on problems common to all classes of publications looking after their interests in connection with postage rates, transportation, copyright matters, paper supply, etc. Membership: 330. President: Walter D. Fuller. Vice Presidents: Albert E. Winger and Howard Ehrlich. Secretary: Francis L. Wurzburg. Treasurer: Arthur S. Moore. Executive Vice-President: Arch Crawford. Headquarters: 232 Madison Avenue, New York 16, New York. The Annual Meeting for 1946 was held at Montauk Manor, Montauk, Long Island, New York, September 9-11. During 1947, there will be a summer meeting in June, and annual Convention in September.

**Radio Relay League, Inc., American**, a non-commercial association of radio amateurs, founded in May, 1914, and bonded for the promotion of interest in amateur radio communication and experimentation. Membership: 51,000. President: George W. Bailey. Headquarters: West Hartford 7, Connecticut. Official Organ: *QST*. Publishers of the *Radio Amateur's Handbook* and other radio training aids. Activities of the League in 1946 included many projects indicating a return to peacetime normalcy, the sponsoring of radio operating contests to improve amateur skills, the holding of "hamfests" and conventions of amateurs, the Code Proficiency program to advance the radio code receiving speed of amateurs; a rigorous technical program to adapt war born radio techniques to amateur communication practice gained much ground, and a "training aids" program instituted to assist local affiliated clubs in planning technical meetings.

**Railroads, Association of American**, founded in 1934, to deal with matters of common concern in railway operations, maintenance, engineering, research, traffic, accounting, finance, valuation, taxation, law, legislation, transportation economics, and public relations. Membership: 193 railroads in United States, 5 in Canada, 6 in Mexico, and 173 associate members. President: J. J. Pelley; Secretary-Treasurer: H. J. Forster. Headquarters: Transportation Building, Washington 6, D.C. See *RAILWAYS*.

**Recreation Association, National**, founded in 1906 with the following objectives: That every child in America shall have a chance to play, that everybody in America, young or old, shall have an opportunity to find the best and most satisfying use of leisure time. Membership: 11,000. President: Howard Braucher. Headquarters: 315 Fourth Avenue, New York 10, New York.

**Relief for Holland, Inc., American**, formerly Queen Wilhelmina Fund, Inc., founded in May, 1940 to provide relief for the people of and refugees from The Netherlands and The Netherlands East Indies. A member agency of the National War Fund. Over 200 chapters across the country collect food, used clothing, household equipment, and other needed supplies for shipment to Holland and the East Indies. Sewing and knitting chapters also make new garments from materials purchased with monies provided by the National War Fund. Purchases of emergency food supplies also are made and shipped abroad. During first nine months operation following liberation of the southern portion of Holland over 7,982,000 lb of food, clothing, and other badly needed materials were sent through national headquarters in New York, followed by 6,248,000 lb. during the first eight months of 1946. Headquarters, Public Relations Office: 55 Broadway, New York 6, New York.

**Relief for Norway, Inc., American**, an American corpora-

tion, founded on April 19, 1940, and directed by Americans for the sole purpose of alleviating distress in Norway. President: Dr. J. A. Aagaard. Headquarters, 135 South La Salle Street, Chicago 3, Illinois. Member of National War Fund, Inc. American Relief for Norway has collected \$3,843,750 from the date of its founding. Gifts-in-kind amounted to \$3,464,550, in addition. The Corporation terminated its relief activities at the end of 1946.

**Religious Education, International Council of**, founded in 1922 to promote Sunday School work, to encourage the study of the Bible, and to assist in the spread of the Christian religion. Membership, 40 Protestant denominations, 81 state councils of churches and religious education, and 142 city and Provincial councils. President: Harold E. Stassen. General Secretary: Roy G. Ross. Headquarters, 203 N. Wabash Ave., Chicago 1, Illinois. The annual meeting is scheduled for February 5-10, 1947, at Grand Rapids, Michigan.

**Rescue and Relief Committee, Inc. International**, founded in 1933, for the rescue and relief of anti-fascist refugees of all nationalities in Europe. It is nonsectarian and provides food, clothes, cash allotments, and medical care, special emphasis on resettlement and rehabilitation programs. Projects include clinics, canteens, children's rest homes, and recuperation centers. Membership, approximately 15,000. Chairman, L. Hollingsworth Wood. Executive Secretary, Sheba Strunsky. Headquarters, 103 Park Avenue, New York 17, New York. Warehouses: 130 Orchard Street, New York 2, New York. Offices in Stockholm, Amsterdam, Brussels, Paris, Geneva, Rome, Istanbul, Mexico City; representatives in several cities, and displaced persons' camps in Germany.

**Research Council, National**, founded in 1916 to "promote research in the mathematical, physical, and biological sciences, and in the application of these sciences to engineering, agriculture, medicine, and other useful arts, with the object of increasing knowledge, of strengthening the national defense, and of contributing in other ways to the public welfare." Membership about 220, composed in majority of representatives of 85 scientific and technical societies; in addition to about 1,800 members of committees of the Council and its Divisions. Chairman, Detlev W. Bronk. Acting Executive Secretary, George D. Meid. Headquarters, 2101 Constitution Avenue, Washington 25, D.C. The Council conducts a wide range of research activities in the medical and natural sciences under the sponsorship or supervision of specially appointed committees. Series of post-doctorate fellowships are administered in the medical and in the natural sciences. A number of publications resulting from work of the Council's Committees are issued each year, either commercially or in the *Bulletin* or *Reprint* and *Circular Series* of the Council. As an operating agency of the National Academy of Sciences, the Council is called upon frequently by agencies of the Government for advice and assistance in connection with many problems of research. See PHYSICS.

**Research Council of Canada, National**, founded in 1916 to have charge of all matters affecting scientific and industrial research in Canada, which may be assigned to it by the Committee of the Privy Council on Scientific and Industrial Research. Membership 15. President, O. J. Mackenzie. Secretary, S. P. Eagleson. Headquarters, National Research Building, Ottawa, Canada. In September 1946 the Council's staff of 1450, including those employed in several laboratory units operated outside of Ottawa, was grouped in laboratory divisions of applied biology, chemistry, mechanical engineering, physics and electrical engineering, atomic energy, and medical research, a section on research plans and publications and a scientific library and technical information service. Restoration of peace has required orientation of research towards reconstruction and the application of new knowledge to civilian industrial enterprise. Outside activities in 1946-47 included a research program of 132 projects under the direction of committees, including medical research in various hospital centers, the granting of one hundred forty-one scholarships for postgraduate research and the awarding of sixty-one grants in aid to responsible workers for special investigations.

**Reserve Officers Association of the U.S.** was founded in 1922 to support and assist in the development and execution of a military policy for the United States which will provide adequate national security. Membership 112,000. President, Brig. Gen. Donald B. Adams. Senior Vice President, Col. Floyd E. Lindley. Vice Presidents, Lt. Col. Chad Dunstan, Capt. Richard Wright, and Lt. Robert H. Winerman. Headquarters: 1726 Pennsylvania Avenue, N.W., Washington 6, D.C. The National Convention will be held in Miami, Florida, June 20-24, 1947.

**Review of Motion Pictures, Inc., National Board of**, an organization founded in 1909 to encourage the best uses of the motion picture recreationally, educationally, and artistically. Membership 500. President: Quincey Howe. Executive Director, Richard Griffith. Headquarters: 70 Fifth Avenue, New York 11, New York.

**Rotary International**, the worldwide organization of all Rotary Clubs, is responsible for the administrative supervision of its member Clubs and for the propagation of the

Objects of Rotary throughout the world. A Rotary Club is a group of representative men, one from each business or profession in a community, who meet together in fellowship to further the "Ideal of Service," which is thoughtfulness and helpfulness to others in business and community life. There are now 5,891 Rotary Clubs in 78 countries and geographical regions, with a membership of nearly 300,000 Rotarians. President: Richard C. Hedke, Detroit, Michigan. General Secretary: Philip Lovejoy, Chicago, Illinois. Headquarters, 35 East Wacker Drive, Chicago 1, Illinois, with additional offices in Bombay, India, London, England; and Zurich, Switzerland. The official Rotary magazine is *The Rotarian* which, with its Spanish edition, *Revista Rotaria*, has a circulation of nearly 300,000. There are also numerous regional Rotary magazines published throughout the world in several different languages. During 1946, Rotary activities included: general community-betterment undertakings; work for crippled children and under-privileged children; the establishment and supervision of camps and clubs for boys and girls, assistance to students through scholarships and student loan funds, the promotion of high standards in businesses and professions, and the development of international good will and understanding. To assist in developing an informed public opinion on vital problems confronting the world, Rotary International provided Rotary Clubs everywhere with background information on the United Nations organization and its specialized agencies. Emphasizing the importance of the United Nations Educational, Scientific, and Cultural Organization, Rotary International published a comprehensive sixty-six page booklet, *In the Minds of Men*, which contains a complete text of the UNESCO Constitution, together with comments and challenging questions, for the assistance of Rotary Clubs in preparing programs on this subject. The month of November, 1946, was designated as "UNESCO Month" in Rotary, and Rotary Clubs throughout the world devoted their programs during the month to that important agency of the United Nations. To assist Rotarians everywhere in implementing the objectives of the United Nations, Rotary International has had observers at meetings of the General Assembly in London and New York, the Food Conference in London, Washington, and Copenhagen, the UNRRA Conference in Atlantic City; UNESCO in London and Paris, the Security Council in New York, the Economic and Social Council in New York, the World Health Conference in New York, and the International Labor Organization Conference in Montreal. The Thirty-Seventh Annual Convention of Rotary International was held in Atlantic City, New Jersey, June 2-6, 1946, with an attendance of 11,287 from forty-six countries. During 1946, Rotary Clubs were reorganized in the following countries and regions formerly occupied by the Axis powers: Belgium, Burma, China, Czechoslovakia, Federated Malay States, France, Greece, Hong Kong, Luxembourg, The Netherlands, Norway; The Philippines, and The Straits Settlements.

**Royal Institution of Great Britain**, founded in 1799 for the promotion, diffusion, and extension of science and useful knowledge. Membership about 900. President, The Right Hon. Lord Rayleigh, F.R.S. Secretary, A. O. Rankine, F.R.S. Headquarters, 21 Albemarle Street, London, W. 1, England.

**Russian Relief, Inc., American Society for**, formerly Russian War Relief, Inc., founded in September, 1941, to furnish relief aid to the Soviet people, collect, and ship medical supplies, clothing, food, household items and crop seeds to the U.S.S.R. Membership 49. Board of Directors: President, Edward O. Carter. Honorary Chairman, Allen Wardwell. Secretary, William W. Lancaster. Headquarters: 5 Cedar Street (P.O. Box 135, Wall Street Station), New York 5, New York. The American Society for Russian Relief, Inc., functions under the Advisory Committee on Voluntary Foreign Aid.

**Safety Council, National**, founded in 1913 to bring about understanding of the steps necessary to prevent accidents of all kinds and to furnish its members with printed material and information for use in conducting accident prevention work. Membership 7,576, mainly companies and associations. President: Ned H. Dearborn. Headquarters: 20 North Wacker Drive, Chicago 6, Illinois. Regional Offices: Central, 20 North Wacker Drive, Chicago 6, Illinois. Eastern Offices: 800 Chrysler Building, New York 17, New York. Western Offices: 111 Sutter Street, San Francisco 4, California. On September 8, 1945, President Truman called upon the National Safety Council to mobilize safety forces of the nation for a postwar safety campaign against accidents of all kinds. To cooperate in this campaign, the Council has called together national associations and has intensified its own activities in traffic and industrial safety. Special publications, films, and posters were produced, and special studies made on several aspects of traffic and industrial safety, as they are affected by, and as they affect the postwar period. The Council published eight magazines and hundreds of studies on accident prevention methods. It distributed over thirteen million safety posters in 1945 for use in industry, in schools, and public places. It conducted many national

safety contests among various groups and issued hundreds of awards. The 1945 National Safety Congress was cancelled due to wartime meeting and travel restrictions. The Congress, normally conducted in October, attracts more than 10,000 delegates who are representative of every phase of the safety movement in all parts of the country. See ACCIDENTS

**Save the Children Federation, Inc.**, founded in 1932 as an organization for rural community child service in America and cooperation overseas with the International Union for Child Welfare and affiliates. Chairman, Guy Emery Shipley, President and Executive Director, John R. Voris, Vice Presidents, William N. Haskell, H. Claude Hardy, Vice Chairman, Howard E. Kershner, Treasurer, John Q. Tilson, Secretary, George W. Briggs. During 1946, domestic activities were centered in disadvantaged rural areas, operating through one hundred county committees to aid especially the children of nine hundred rural "sponsored schools." The overseas program in 1946 included a "school sponsorship" plan in France, Belgium, Holland, and Norway, and an individual "child sponsorship" plan (for refugee children) in these countries as well as in Sweden. A "child sponsorship" plan is being instituted in Finland as the improved conditions in Norway make it possible to discontinue aid there. Other needed gifts in kind, as food and school supplies, are secured. Total disbursements—cash and commodities—for the nine months ending September 30, 1946 were \$1,478,483.90.

**Savings and Loan League, United States**, a trade organization founded in 1892 by the savings, building and loan associations and cooperative banks of the United States, whose assets total \$9,500,000,000 and whose chief business is the accumulating of savings and the lending of these funds to finance home ownership. Membership 3,640 associations and 47 affiliated State Leagues. President, Walter W. McAllister, Executive Vice President, Morton Bodfish, Headquarters, 221 North LaSalle Street, Chicago 1, Illinois. The organization instructed its members in the procedure for making veterans home loans under the Servicemen's Readjustment Act as revised at the close of 1945, and by a campaign of encouragement and inspiration was instrumental in the extension of \$1,000,000,000 of home owner credit to veterans in 1946. Through its educational division, it effected the publication of a comprehensive textbook on *Real Estate Law*. The League instituted a quarterly statistical report on the veterans' loans made by member institutions and collaborated with the American Legion in developing improvements in the machinery for this specialized type of home lending. The League published the sixteenth of its series of year books, *Savings and Loan Annals*, 1945.

**Sculpture Society, National**, organized in 1893 to advance the knowledge and appreciation of good sculpture and to encourage its creation. The National Sculpture Society cooperates with organizations or communities in planning competitions for projects comprising sculpture. A trust fund which provides loans for sculptors in need is administered. The membership consists of Fellows, Members, Allied Professional Members, Lay Members, and Honorary Fellows. Membership about 300. President, Donald DeLue, Secretary, Carl L. Schmitz, Educational Director, John J. Cunningham, Headquarters, 1083 Fifth Avenue, New York 28, New York. Several prizes are available for award in competitions and exhibitions. Awards in 1946 follow: The winner of the \$1,000 prize in the competition for the Herbert Adams Memorial Medal was Thomas LoMedico. Winners for the "Mrs. Louis Bennett Prize" were Donald DeLue and Thomas LoMedico (each received \$50). Winner of the Lindsey Morris \$150 prize in the competition for Bas-Relief was Albert W. Wein. During the year the Society circulated several exhibitions of Enlarged Photographs of Ecclesiastical Sculpture. Applications for exhibitions of enlarged photographs, approximately 24" x 30", of "American Patriots in Sculpture," Ecclesiastical Sculpture, Garden Sculpture and General Sculpture, will be acted upon in order of their receipt. Smaller size photographs of "American Patriots" and of Ecclesiastical Sculpture are available for informative study for specific needs.

**Seeing Eye, Inc., The**, a philanthropic association founded in 1929 for the purpose of supplying blind persons with dogs trained to act as guides, training and teaching instructors in the science and technique of educating dogs as guides, and educating and training blind persons in the proper use and handling of these dogs. The association trains 150 students annually, 1,300 Seeing Eye dogs have now been placed with blind men and women who came to the school to learn to use them. President, Henry A. Colgate, Headquarters, Morristown, New Jersey. New York Office, 9 Rockefeller Plaza, New York 20, New York. The Seeing Eye, Inc., is supported by annual memberships and contributions. The maximum cost to a civilian blind person is \$150, although the actual cost to The Seeing Eye is many times that amount. Seeing Eye dogs are now supplied without cost to eligible members of the armed forces who have lost their sight in the line of duty.

**Small Business Men's Association, Inc., National**, founded

November, 1937, as a nonpartisan, nonprofit organization to give small business men an effective voice in national affairs, to protect and advance the American system of free, private enterprise under the Constitution, and to promote the general welfare by collecting and distributing information and data affecting the financial, commercial, civic, and industrial interests of its members and the nation. President, DeWitt Emery, Secretary, James S. Westbrook, Headquarters, 163 North Union Street, Akron 4, Ohio. Executive Office, 39 South LaSalle Street, Chicago 5, Illinois. Research Office: 1028 Connecticut Avenue, N.W., Washington 6, D.C.

**Social Hygiene Association, American**, formed in 1914 to combat syphilis and gonorrhea, to fight prostitution and other unwholesome conditions, to promote sound sex education and training for marriage and parenthood, and to protect and improve the American family as the basic social institution. As a participating service of the National War Fund, the Association's major resources were devoted during the war to helping maintain the lowest possible venereal disease rates, to protecting industrial workers and members of the armed forces from prostitution and related conditions, and to mitigating the deleterious effects of war on young people. Membership, 150 organizations, approximately 18,000 individuals. President, Dr. Ray Lyman Wilbur, Chairman of Board of Directors, Dr. William F. Snow, Executive Director, Dr. Walter Clarke, Headquarters, 1790 Broadway, New York 19, New York. Services include advice and consultation; surveys, production, and distribution of literature, films, and other materials. National Social Hygiene Day sponsored annually is marked by more than 5,000 meetings throughout the country. An important part of the Association's post-war program is through its Committee on International Relations and Activities, which conducts a Liaison Office for International Social Hygiene Agencies and Activities at national headquarters. The William Freeman Snow medal for distinguished service in the social hygiene field is presented to an outstanding person each year on the occasion of the Association's Annual Meeting in New York, New York.

**Social Science Research Council**, a corporation organized in 1923 to promote the development of the social sciences. Membership, 21 directors elected or appointed by seven national social science societies, 9 directors at-large elected by the board of directors, all former directors, numbering 66 in 1945, retain membership in the corporation. Chairman, E. W. Burgess, Secretary, Shepard B. Clough, Treasurer, Shelby M. Harrison, Executive Director, Donald Young, Headquarters, 230 Park Avenue, New York 17, New York. During 1944-45 nine committees were engaged in planning and promotion of research; 23 grants-in-aid of research and 61 fellowships were awarded.

**Social Sciences, National Institute of**, was incorporated in January, 1899, and has been in its present form since 1912. The Corporation promotes study and research of the Social Sciences and rewards "distinguished services rendered to humanity, either by election to membership, or by bestowal of its Honor Medals, or other insignia." Membership limited to 600 (not including Honorary Members numbering to about 20). President, Clarence G. Michals, Treasurer, Lewis Latham Clarke, Secretary, Rosina Hahn, Headquarters, 271 Madison Avenue, New York 16, New York. During 1946, the Annual Meeting was held, February 14th, at the Union Club in New York City. At the Annual Dinner, held May 22, 1946, at the Waldorf-Astoria, New York City, the Gold Medal was awarded to the Hon. Edward R. Stettinius, Jr., Dean Virginia C. Gildersleeve, and Hon. Robert Moses.

**Social Work, National Conference of**, founded in 1873 to facilitate discussion of the problems and methods of practical human improvement, to increase the efficiency of organizations devoted to this cause, and to disseminate information. Membership, 6,000. President, Arlen Johnson, General Secretary, Howard R. Knight, Headquarters, 82 N. High Street, Columbus 15, Ohio.

**Social Workers, American Association of**, founded in 1921 to formulate and establish standards of personnel and of conditions under which social work is practiced, to seek to establish satisfactory conditions for the organization and administration of social services, to encourage through its membership requirements, proper and adequate basic preparation and training for social work practice, to disseminate information concerning the profession, and to conduct investigations which contribute to an understanding of social welfare needs. Membership, 11,200. President, Paul L. Benjamin, Executive Secretary, Joseph P. Anderson, Headquarters, 130 East 22 Street, New York 10, New York.

**Sociological Society, The American**, founded in 1905 to encourage sociological research, discussion, teaching, and publication. Membership, 1,500. President, Carl C. Taylor, Secretary, Conrad Taeuber, Headquarters, U.S. Department of Agriculture, Washington 25, D.C. The Society issues the bi-monthly journal, the *American Sociological Review*.

**Special Libraries Association**. This association was founded in 1909 as an international organization of li-

brarians and information experts, who serve manufacturing concerns, banks, corporations, law firms, newspapers, advertising and insurance agencies, transportation companies, research organizations, museums, hospitals, business branches, and other departments of public and university libraries, government bureaus, associations, and other organizations in the fields of business, medicine, the sciences, technology, social welfare and the arts. Membership approximately 4,500. President: Betty Joy Cole. Executive Secretary: Kathleen B. Stebbins. Headquarters, 81 East 10 Street, New York 8, New York. Publications: *Special Libraries*, published monthly, September to April, with bi-monthly issues from May to August, sponsored periodical, *Technical Book Review Index*, issued ten times a year, September to June. *Special Library Resources*, vol. 1, was published in 1941, vol. 2, in 1946, vols. 3-4 to be published shortly. Other recent publications are: *Index to American Petroleum Statistics*, *Handbook of Commercial, Financial, and Information Services*, *Source List of Selected Labor Statistics*, *Classification and Cataloging of Maps and Atlases*, *A List of Subject Headings for Chemistry Libraries*, *Directory of Microfilm Services*. Publications in preparation. Revised edition of *Union List of Scientific Periodicals in Chemistry Libraries*, *Special Library Manual*, *Manual for Newspaper Libraries*; *Manual for Science-Technology Libraries*. A convention is held each year, usually in June. The 1947 convention will be held June 10-13, in Chicago, Illinois.

**Standards Association, American**, a federation of national groups dealing with standardization which provides a national clearinghouse for the cooperative development of standards by its members and other interested groups. Membership, 96 trade associations, technical societies, consumer groups, and government departments and some 2,000 industrial concerns who hold membership directly or by group arrangement. President: Henry B. Bryans. Vice President and Secretary: P. G. Agnew. Headquarters, 70 East 45th Street, New York 17, New York. Since its foundation in 1918 the Association has developed eight hundred thirty-seven standards in all fields of engineering, industrial safety, industrial medicine, highway safety, and consumer goods. Among these are many standards developed by technical societies and trade association and advanced to national standards by adoption of the ASA. Many emergency standards developed for war purposes currently are being reviewed for incorporation into the list of regular American Standards. The purpose of ASA is to develop standards as tools for the economic and social development and the national security of the country.

**State Governments, The Council of**, a joint governmental agency established in 1925 by the states to serve as a clearinghouse of information for public officials and legislators, to encourage cooperation among the states and between the states and the Federal Government, and to make state government more effective. President: Governor Edward Martin; Executive Director: Frank Bane. Headquarters, 1913 East 60th Street, Chicago 37, Illinois. The Council has cooperated with Federal and State governments in resolving many problems of a war and postwar nature including civilian defense, rationing, transportation, finance and intergovernmental fiscal relations, crime, crime control, juvenile delinquency, interstate trade barriers, public welfare, conservation of natural resources, postwar reconstruction and development, unemployment compensation, education, and others. The Council is also the secretariat of the Governors' Conference, the American Legislators' Association, the National Association of Attorneys General, the National Association of Secretaries of State and the National Association of State Budget Officers. Membership, 48 states. See **STATE LEGISLATION**.

**Statistical Association, American**, founded in 1839 as a scientific and educational organization of persons seriously interested in the application of statistical methods to practical problems, the development of more useful methods, and the improvement of basic statistical data. Membership 4,057. President: Isador Lubin. Secretary: Lester S. Kellogg. Headquarters: 1603 K Street, N.W., Washington 6, D.C.

**Statistical Institute, Inter American**, founded May 12, 1940, to foster statistical development in the Western Hemisphere. Individual members. Constituent, 76; ex-officio, 28. Institutional members: Adhering governments, 17 (Argentina, Bolivia, Brazil, Canada, Chile, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Mexico, Nicaragua, Panama, Peru, United States, Venezuela). Affiliated organizations, 6; business sponsors, 2. President of the Bureau (Executive Committee) M. A. Teixeira de Freitas, Rio de Janeiro. Headquarters of Permanent Office, Washington D.C. Committees as follows: 1950 Census of the Americas; agricultural statistics; current publications, demographic statistics, educational and cultural statistics, projects review; statistical education; yearbook. Principal activities are (a) quarterly journal; (b) yearbook; (c) maintenance of statistical source files and issuance of bibliographical materials; (d) maintenance of biographical information on statistical personnel in the Western Hemisphere; (e) technical program in subject matter fields. Technical work is

carried on principally by statisticians loaned by their governments to the IASI for periods of one year each. The quarterly professional journal, *Estadística*, fourteen numbers of which had appeared up to September 30, 1946, is published in Mexico. Work is actively in progress for the issuance of the first edition of an inter-American statistical yearbook, early in 1947; existing national income estimates for the Latin American nations have been studied and evaluated; a survey of the methods used in the last population census of each American nation has been completed and published, and preliminary plans are in full progress for a continental population census in 1950 with minimum standards; a survey of methods used in agricultural production statistics has been made and published; an international foreign trade classification scheme has been adapted to American trade purposes. Surveys are now under way in (a) industrial production statistics, (b) statistical training methods, (c) vital statistics methods and procedures, (d) census cost analysis, (e) census mapping standards, (f) methods in educational and cultural statistics. A third edition of the *Directory of Statistical Personnel in the American Nations* is now in preparation, to be available in 1947. The definitive (first) edition of a *Bibliography of Selected Statistical Sources in the American Nations* is now in preparation, to be available in 1947.

**Surgeons, American College of**, founded by surgeons of the United States and Canada in 1913 to advance the science, and the ethical and competent practice of surgery; to establish hospital standards, to engage in research; to aid in better instruction of doctors, to formulate standards of medicine, and to improve all adverse conditions surrounding the ill and injured wherever found. Membership: 14,000. President and Chairman of the Board of Regents: Irvin Abell. Headquarters, 40 East Erie Street, Chicago 11, Illinois. Ten sectional meetings were held in 1946. The annual Clinical Congress was held in Cleveland, Ohio, December 16 to 20, 1946. Sectional meetings are scheduled in eight cities in March and April, 1947, and a Clinical Congress for September 8 to 14, 1947, in New York, New York.

**Swedish Historical Museum, American**, established in 1926; owned and operated by the American Swedish Historical Foundation. Its purpose is to preserve the history and the culture of Americans of Swedish ancestry, as well as their contributions to American life, and as such, is the outstanding repository in the United States. Its annual program includes current exhibitions, lectures, publications, including *Yearbook*, receptions to distinguished guests, and two festive occasions: the Lucia celebration and the Spring Fete. The Museum is also custodian of one of Philadelphia's oldest houses—"The Christina House." Headquarters, 19th Street and Pattison Avenue, Philadelphia 45, Pennsylvania. President: Ormond Rambo, Jr. Vice Presidents: William L. Batt, Samuel P. Wetherill, Henry Ericsson, Carl R. Chindblom, Walter G. Nord. Treasurer: Maurice A. Hogeland. Secretary: Allan Lake Rice. Corresponding Secretary: Adolph B. Benson. Curator: Marshall W. S. Swan. Executive Secretary: Elizabeth Z. Swenson. Librarian: Nellie B. Gibson.

**Tax Association, National**, founded in 1907 to promote the discussion and dissemination of educational and scientific information on tax questions. Membership 1,500. President: James W. Martin. Secretary: Ronald B. Welch. Headquarters: State Board of Equalization, Sacramento 14, California.

**Tax Foundation, Inc.**, founded in 1938 to administer funds for the furtherance of science in taxation, efficiency in public administration, and economy in public finance; to collect data, make studies, conduct surveys, research projects, and demonstrations; to publish periodicals and issue other literature, and to further public understanding germane to these premises. President: John W. Hanes. Executive Director: Charles O. Bauer. Headquarters: Room 1420, 30 Rockefeller Plaza, New York 20, New York.

**Tax Institute, Inc.**, founded in December, 1932, to serve as a national citizen's bureau of tax information. Membership: 1,100. President: James W. Martin. Executive Director: Mabel L. Walker. Headquarters: 150 Nassau Street, New York 7, New York. A two day symposium on Corporate Income Taxation was held in New York City on December 6-7, 1946.

**Testing Materials, American Society for**, a technical Society founded in 1898 to promote knowledge of the materials of engineering and to standardize specifications and methods of testing. Membership 6,000. President: Arthur W. Carpenter. Executive Secretary: C. L. Warwick. Headquarters, 1916 Race Street, Philadelphia 3, Pennsylvania. During 1946 the Society intensified many of its activities into newer fields and began a study of technical work on ultimate consumer goods, the testing of parts and assemblies; a study of testing building constructions, and new standards were completed covering various aspects of adhesives; testing gaseous fuels and numerous other materials and products. The 1946 Annual Meeting, the forty-ninth, was held in Buffalo, New York, during the week of June 24, with the Biennial Exhibit of Test-

ing Apparatus and Related Equipment. The 1947 Committee Week and Spring Meeting is to be in Philadelphia, February 24-28, and the Annual Meeting will be in Atlantic City during the week of June 16, 1947.

**Textile Foundation, The**, an organization founded in 1930 to do scientific and economic research for the benefit of the textile industry. Chairman of Board of Directors: Franklin W. Hobbs. Secretary: Edward T. Pickard. Headquarters: Industrial Building, National Bureau of Standards, Washington, D. C. Fundamental research laboratories are at Princeton, New Jersey. Publication office is at Kent, Connecticut.

**Theosophical Society in America, The**, was founded in November, 1875, for the purpose of forming a nucleus of the universal brotherhood of humanity, without distinction of race, creed, sex, caste or color, to encourage the study of comparative religion, philosophy, and science, and to investigate the unexplained laws of nature and the powers latent in man. The Society is world-wide in scope, having its international headquarters at Adyar, India, and being organized into national Sections in thirty-nine countries. National President: James S. Perkins. Vice President: E. Norman Pearson. National Secretary: Miss Ann Kerr. National Treasurer: Edwin N. Lord. The foregoing, together with the following, constitute the National Board of Directors: L. W. Rogers, William J. Ross, and John A. Sellon. Headquarters: P. O. Box 419, Wheaton, Illinois. There will be held at National Headquarters, during 1947, the National Convention, from July 19 to 23, and the summer school sessions.

**Town Hall, Inc., The**, founded in 1894 to establish a non-partisan, nonsectarian educational institution for the advancement and study of science, the arts, social, political and industrial problems, and to aid in the development of good citizenship and sound municipal government. Membership: 2,500. President: George V. Denny, Jr. Educational Director: Gregor Ziemer. Vice President-Comptroller: William Steinhoff. Secretary: Mrs. Yorke Allen. Headquarters: The Town Hall, 123 West 43 Street, New York 18, New York. Outstanding events during 1946-47, fifty-second season, included a series of morning lectures Mondays, Wednesdays, and Saturdays from November through March; a series of Town Hall Workshops and Short Courses; a broadcast of "America's Town Meeting of the Air" each Thursday evening over the American Broadcasting Company network.

**Trade Association Executives, American**, formed in 1920 as a means to establish a better and wider public understanding of the purposes and functions of responsible trade associations, the professional standards of service and conduct which they maintain, and character of service rendered; and provides a common ground where men and women representing trade associations may pool their interests and share in the interchange of information and opinion. Membership: nearly 1,100. President: James L. Fri. Treasurer: Richard P. White. Executive Secretary: Ruth I. Mulroy. Headquarters: 421 Evening Star Building, Washington 4, D. C. The Annual Meeting was held at the Hotel Cleveland, in Cleveland, Ohio, October 10-12, 1946.

**Transportation Association of America**, founded in April, 1935, to carry out research and education in matters pertaining to transportation, dedicated to the preservation of private ownership, and to the formulation and effectuation of a sound national transportation policy. President: Sydney Anderson. Secretary: E. C. Krogh. Headquarters: 105 West Adams Street, Chicago 3, Illinois.

**Travelers Aid Association, National**, an organization founded in 1917, to promote throughout the country means of cooperation, and to improve the standards of Travelers Aid Service, to study the causes of migration; and to encourage a public understanding of moving people. Travelers Aid Service includes individualized information, travel, and short contact service to travelers and other persons, in difficulty, away from their homes. Membership: operating members, 103. Travelers Aid Societies providing Travelers Aid services in 431 communities; co-operating members, 871 organizations and individuals on call for Travelers Aid service in 1,144 places where no regular Travelers Aid Society exists; associate members, individuals and organizations interested in supporting Travelers Aid services. President: Hobart M. McPherson. Secretary: Mrs. Robert C. Clothier. Headquarters: 425 Fourth Avenue, New York 16, New York. As a member agency of the United Service Organizations, Inc., it has administration of the USO Travelers Aid Service Units and general supervisory responsibility for the Lounges for Troops in Transit. A biennial convention is scheduled to be held in 1948.

**Tuberculosis Association, National**, founded in 1904 for the study and prevention of tuberculosis. Membership: approximately 3,400. President: Dr. William P. Shepard. Secretary: Dr. Herbert R. Edwards. Headquarters: 1790 Broadway, New York 19, New York. In 1946 the Trudeau Medal was awarded to Dr. Max Pinner at the forty-second annual meeting of the Association, Buffalo, New York, June 10-13, 1946.

**United Nations, Inc., American Association for the, for-**

merly the League of Nations Association, founded in 1923 to teach the need for the cooperation of all nations in building an international organization as the essential basis of peace; now exclusively devoted to studies and popular education activities on the United Nations. Membership: 10,000. President: Dr. William Emerson. Director: Clark M. Eichelberger. Headquarters: 45 East 65th Street, New York 21, New York. Research affiliate: The Commission to Study the Organization of Peace. The Association and the Commission publish expert reports and popular material in connection with a three-fold program of education: (1) on the United Nations and its specialized agencies; (2) on American foreign policy to make effective United States membership in the United Nations; (3) on necessary revision of UN and its agencies to meet the changing needs of a changing world. Services: national and local groups with speakers, recordings, program and teaching aids, press and feature material. Monthly magazine: *Changing World*. Sponsored national United Nations Week, October 20 to 26, to coincide with first meeting of the General Assembly in the United States on October 23. Working in conjunction with National Broadcasting Company and National Education Association on the project, secured the cooperation of over eighty national organizations. Local programs were carried on through twelve regional offices and forty city and state-wide branches of the Association for the project and for regular program of the Association. The Association's Education Committee conducted its 20th National Student Contest in 1946, with 1,738 public, private, and parochial schools participating. The theme was the United Nations. It also organized in the colleges some eighty-five United Nations Committees, which have formed the Collegiate Council for the United Nations, as well as a new affiliate, United Nations Youth, for high school young people.

**United Seamen's Service, Inc.**, founded September 1, 1942, to provide for merchant seamen rest centers, residential and recreation clubs, personal service, and any other aids necessary to the health, morale, and general welfare of officers and men of the merchant marine, both in the United States and abroad. Chairman of the Board: Admiral William Ward Smith. President: William S. Newell. Secretary: Miss Dorothy Kahn. Executive Director: Otto J. Hicks. Headquarters: 89 Broadway, New York 6, New York. On October 1, 1946, USS was operating in fifteen ports in the United States and eighteen overseas. In these ports it had fifty-five different facilities, consisting of residential and recreational clubs, personal service offices, port medical offices and rest centers for seamen. As war fronts advanced during 1945, centers were opened in Germany, Japan, and China to give services to seamen carrying supplies to fighting armies; in 1946 these and other centers continued for seamen carrying relief and reconstruction cargoes and occupation troops' supplies as well as reviving commercial traffic.

**United Service for New Americans, Inc.**, created in 1946 by consolidation of National Refugee Service, Inc. and National Service to Foreign Born of National Council of Jewish Women. Aids displaced persons and refugees immigrating to the United States; provides a complete program of service for their integration in American life. Membership: Individuals, 500, organizations, 1,200. Co-operating local groups and agencies: President: Edwin Rosenberg. Executive Director: Joseph E. Beck. Headquarters: 15 Park Row, New York 7, N. Y. Service in 1946 included: provisions of agency's corporate affidavit as basis for issuance of 2,800 visas; family service and economic assistance to 4,780 individuals; 62,400 migration services; 7,800 port, dock, and transient services; temporary shelter for 1,260 individuals. Also provides specialized services for refugee children and professional groups, location and international social service; job placement, vocational guidance, and retraining. The agency is non-sectarian in scope, though parts of its program deal mainly with Jewish immigrants.

**United Service to China, Inc.** (formerly United China Relief, Inc.) organized in February, 1941, to raise funds for relief, rehabilitation, and other forms of constructive service to China, and also to promote understanding and co-operation between the peoples of America and China. Honorary Chairmen: General George C. Marshall, and Paul G. Hoffman. National Campaign Chairman: Edward R. Stettinius, Jr. Chairman of the Board: Charles Edison. Vice Chairmen: Eugene E. Barnett, and Cornelius V. Starr. President: James L. McCaughy. Executive Vice President and Secretary: B. A. Garvide. Vice President and Field Director: Dwight W. Edwards. Treasurer: James G. Blaine. Controller: Henry G. Perry. Headquarters: 1700 Broadway, New York 19, New York. Organizations Co-operating with United Service to China include the following: American Bureau for Medical Aid to China, American-Chinese Committee of the Mass Education Movement, American Friends Service Committee, Associated Boards for Christian Colleges in China, China Aid Council, Church World Service, Indusco (American Committee in Aid of Chinese Industrial Cooperatives).

**University Professors, American Association of**, a professional organization of college and university teachers and

investigators, founded in 1915 to facilitate more effective cooperation among the members of the profession, to promote the interests of higher education and research, and to increase the usefulness and advance the standards and ideals of the profession. The nature of its work is indicated by the titles of the committees, which include Academic Freedom and Tenure, Freedom of Speech, International Relations, Educational Standards, Author-Publisher Contracts, Professional Ethics, Relation of Junior Colleges to Higher Education, Cooperation with Latin-American Universities, Pensions and Insurance, Preparation and Qualification of Teachers, Encouragement of University Research, Library Service, Place and Function of Faculties in College and University Government, and the Economic Welfare of the Profession. Membership: 20,000. President: Edward C. Kirkland. General Secretary: Ralph E. Himstead. Headquarters: 1155 Sixteenth Street, N.W., Washington 6, D.C.

**Urban League, National**, an interracial organization founded in 1910, which works to improve living conditions among Negroes in cities throughout the United States. The League operates through affiliates in fifty-five key industrial centers, which have interracial boards and committees staffed by professional trained workers. Membership: about 60,000. President: William H. Baldwin. General Secretary: Eugene Kinckle Jones. Executive Secretary: Lester B. Granger. Headquarters: 1183 Broadway, New York 10, New York. In 1946 the League accepted two new affiliates—Denver and Oklahoma City; made social surveys in five cities, followed by special conferences with local leaders on housing, employment, child welfare, health, and leisure-time activities; conducted continuous vocational training and occupational counseling service, provided five social service fellowships at the New York School of Social Work and at the University of Pittsburgh, promoted publicity in daily and periodical press on interracial matters. It publishes *Opportunity*, *Journal of Negro Life*, and occasional papers on problems of racial contact. The 1947 Annual Meeting to be held in New York February 19.

**Veterans Committee, Inc., American**, was founded in January 1943, by veterans of World War II, for the purpose of achieving a more democratic and prosperous America and a more stable world. Membership: 75,000. Chairman: Charles G. Bolfe. Vice Chairman: Gilbert A. Harrison. National Planning Committee: Meyer Bernstein, Fred Borden, Alex. Effthim, Lewis Frank, William Goodman, E. J. Kahn, Jr., Cord Meyer, Jr., Merle Miller, Robert Nathan, Kenneth Pettus, Morris Pottish, Ben Rinaldo, Oren Root, Jr., Franklin Roosevelt, Jr., Michael Straight, Franklin Williams. Headquarters: 1860 Broadway, New York 23, New York.

The AVC pushed a very active legislative program. Its legislative office implemented the AVC stand with conferences and discussions with members of Congress and many activities were promoted on a nationwide basis. In connection with OPA housing, terminal leave, cars for amputees, and other bills. The National Planning Committee Meeting was held November 9-11, 1946. The American Veterans Committee Convention will be held in May, 1947.

**Veterans of Foreign Wars of the United States**. A year of expansion in the Veterans of Foreign Wars of the United States that brought membership to near the 2,000,000 mark and the number of local posts to more than 8,000 was climaxed by the 47th National Encampment at Boston, Massachusetts, September 1-6. Indicative of the increased power and prestige of the organization was the imposing list of encampment speakers, among them, General Dwight D. Eisenhower, Admiral Chester W. Nimitz, General Carl Spaatz, General Omar Bradley, President William K. Jackson of the United States Chamber of Commerce, President William Green of the American Federation of Labor, and National Housing Administrator Wilson Wyatt. The delegates, through encampment resolutions, established aggressive policies for the organization on national and international issues. While endorsing the United Nations as the agency for preserving world peace and calling upon member nations to renounce war as a sovereign right, the overseas veterans insisted upon maintenance by the United States of a strong military establishment. They endorsed extension of Selective Service, universal military service and stockpiling of materials essential to military operations. The encampment called for positive measures to halt activities of Communists, Fascists, and un-American agitators in the nation, demanding that members of the Communist party be barred from state and federal ballots. In other resolutions, the V.F.W. called for retention by the United States of all information on the atomic bomb, revision of the veteran housing program to vest control of all phases in a single administrator, and enactment of the National Employment and Economic Development Corporation Act to create jobs and opportunities for veterans. No stand was taken on the issue of unification of the Armed Forces pending receipt of testimony by experts on both sides of the question. The list of 1946-47 officers of the V.F.W. includes: Louis E. Starr, Portland, Oregon, Commander-in-Chief; Ray H.

Brannaman, Denver, Colorado, Senior Vice Commander-in-Chief; Lyall T. Beggs, Madison, Wisconsin, Junior Vice Commander-in-Chief; R. B. Handy, Jr., Kansas City, Missouri, Quartermaster General; Edward H. McAloon, New York, New York, Judge Advocate General; Dr. Matthew S. Levitas, Brooklyn, New York, Surgeon General; and the Rev. Gerald M. Dougherty, Chicago, Illinois, National Chaplain.

**Veterinary Medical Association, American**, founded in 1863 to promote veterinary science and its proper application. Membership: 9,500. President: B. T. Simms. Secretary: J. G. Hardenbergh. Headquarters: 600 South Michigan Avenue, Chicago 5, Illinois. The International Veterinary Congress prize for distinguished service to the veterinary profession was awarded in 1946 to Dr. T. H. Ferguson, Lake Geneva, Wisconsin. The Borden Award for 1946 for outstanding research contributing to the control of dairy cattle disease was awarded to Dr. W. E. Cotton, Alabama Polytechnic Institute, Auburn, Alabama. The Humane Act Award for 1946 was awarded to John Newton of Columbus, Ohio. The 1946 meeting was held in Boston.

**Vocational Association, Inc., American**, founded in 1925 with the conviction that occupational education is a primary right and privilege of every citizen. Membership: 25,000. President: C. L. Greiber. Executive Secretary: L. H. Dennis. Headquarters: 1010 Vermont Avenue, N.W., Washington 5, D.C.

**Vocational Guidance Association, Inc., National**, founded in 1913 to unite persons engaged or interested in any phase of vocational guidance and occupational adjustment. Membership: 4,500. President: C. Gilbert Wrenn. Executive Secretary: Christine Melcher. Headquarters: 82 Beaver Street, New York 5, New York. Official journal: *Occupations*, the Vocational Guidance Journal, published monthly October through May. The organization functions through 75 branches, in 37 States, 2 territories, and Canada, national committees specializing in various phases of vocational guidance, regional conferences. Current activities are concerned with school-work programs, plans for occupational adjustment and rehabilitation, and cooperation in promoting vocational guidance in Latin America. National Convention will be held April 6-10, 1947, Stevens Hotel, Chicago, Illinois.

**Weights and Measures, American Institute of**, founded in 1916 to defend the English system of weights and measures against pro-metric propaganda and to be educational in respect of the use of weights and measures. President: W. R. Ingalls. Secretary: Robert F. Cogswell. Headquarters of the Institute: 33 Rector Street, New York 6, New York.

**Wildlife Foundation, American**, an organization incorporated in 1935 for the conservation and restoration of North American wildlife. President: Frederic C. Walcott. Secretary: C. R. Guterthum. Headquarters: Investment Building, Washington 5, D.C. The foundation is devoted to the advancement of all phases of natural resource conservation, restoration and management and uses its reserve of endowed funds to perpetuate the essential and necessary wildlife activities that cannot be financed by public funds, or are curtailed by the occasional and frequently experienced governmental retrenchments. The foundation is equipped to receive contributions from public-spirited individuals, firms and corporations, safeguard the holdings, and expend the funds or the interest therefrom in the most economical and advantageous manner and for the best public interest. Contribution to this Foundation Fund is subject to deduction for income tax purposes.

**Wildlife Management Institute**, an educational and scientific organization incorporated in 1946 for the restoration and management of wildlife resources. President: Dr. Ira N. Gabrielson. Vice President: C. R. Guterthum. Headquarters: 822 Investment Building, Washington 5, D.C. The Institute through its field staff is equipped to cooperate with all agencies and groups in advocating the adoption and use of sound wildlife practices and techniques on both public and private lands. It sponsors the annual North American Wildlife Conferences and publishes the *Transactions* of these important meetings. The Institute publishes outstanding books on wildlife subjects, as well as booklets and leaflets relating to the restoration and wise use of natural resources. It encourages the training of technical personnel and the promotion of essential research through the issuance of college scholarships, fellowships, and research grants. The Institute sponsors cooperative game management and research projects in the several States, Canada, and Mexico. It also disseminates practical literature and information designed to stimulate a better understanding of the imperative need for the proper management and restoration of the nation's renewal resources.

**Woman's Association, American**, founded in 1922 to provide for women engaged in commercial and professional pursuits: facilities for business and social contacts, and opportunities for recreation, mental stimulus, and physical betterment; to advance the economic, cultural, and social interests of women in their chosen fields of endeavor;

and to maintain in the City of New York and elsewhere a clubhouse or other club quarters. Membership limited to 2,000. President, Natalie W. Linderholm, Secretary, Elizabeth Kelley. Headquarters: The Barclay, 111 East 48 Street, New York 17, New York. Events of 1946 included the annual Association Meeting in April at which the Anna W. Porter Memorial Award was given to Helen G. Fuller, quarterly meetings in February, September and December, the formal opening of National Business Women's Week in October, the 20th Annual Friendship Dinner in November at which the AWA Award for eminent achievement was presented to Dr. Elise Strang L'Esperance, and AWA Woman of the month honors to Elizabeth Arden, Mary H. Donlon, Sara G. Blanding, Jane Peterson, Mrs. Oswald B. Lord, Sally Butler, and women delegates to the UN General Assembly.

**Woman's Christian Temperance Union, National (WCTU)**, founded in 1874 to unite Christian women of the United States, for the education of public sentiment in favor of total abstinence from the use of all alcoholic beverages, and to train youth in habits of sobriety. Membership, about 400,000. President, Mrs. D. Leigh Colvin. Secretary, Miss Lily Grace Matheson. Headquarters, 1730 Chicago Avenue, Evanston, Illinois. To develop a working personnel, an organization training school is held yearly at headquarters. To train teachers to supervise narcotic education in schools, a three months' winter seminar is held in Evanston and summer credit courses in various colleges, as well as courses at Evanston and Chautauqua are given. A midyear round table for those who have completed the credit courses is held at headquarters. Increased gifts and purchases brought the collection in the Frances Willard Library up to four thousand volumes, and a similar number of pamphlets and manuscripts, making it the largest alcohol reference library in the United States, open to scholars and specialists in this field. Children's and youth's activities are strengthened through accelerated programs of the Loyol Temperance Legion and the Youth Temperance Council.

**Women Artists, Inc., National Association of**, founded in 1889 to exhibit and display works of art by contemporary artists. Membership 800. President, Mrs. Grace Treadwell. Secretary, Mr. Arion Mueller. Gallery Director, Bianca Todd. Headquarters, The Argent Galleries, which the Association maintains, 42 West 57 Street, New York 19, New York. The Association sponsors an Annual Exhibition, at which a number of prizes are awarded, general exhibitions, rotary shows, a sketch class, lectures, etc. The annual open meeting is held at the headquarters the second Wednesday in April. At the Annual Exhibition, held at the National Academy of Design in April, 1946, prizes were awarded to the following: For sculpture, Maria Nunez del Prado, Grace Turnbull, Ruth Nickerson, Katherine Lane, and Frances Mallory Morgan; for painting, Catherine Grant, Betty Waldo Parrish, Ada Roxano Cocero, L. K. McDuffie, Theresa F. Bernstein, Rose Churchill, Frances Pratt, Mary van Blarcom, and Cornelia Hildebrandt; and for prints, Gladys Mock, Roselle Oak, Alice Murphy. Association prizes were awarded to Gene Alden Walker and Lillian Cotton.

**Women's Clubs, General Federation of**, founded in 1890 to unite women's clubs and like organizations throughout the world for the purpose of mutual benefit, and for the promotion of their common interest in education, philanthropy, public welfare, moral values, civics and fine arts. Membership, 8,000,000 women in 17,000 clubs, 50 state federations, including Alaska, District of Columbia, and 61 foreign clubs. Major activities a "Youth Conservation" program, which has been instrumental in establishing State Youth Councils and community recreation centers throughout the country; an educational and legislative campaign to strengthen and expand the United Nations, an international goodwill program through which thousands of contacts have been made with women abroad, through the medium of the General Federation's foreign and territorial clubs, and food and clothing sent to needy families, a scholarship program for American and foreign students (since 1930, a total of \$59,707 has been awarded as gifts to eighty foreign students for study in higher institutions of learning in the United States); a veterans' program aimed at establishing community one-stop service centers; participation in all national relief programs. Monthly publication, September to May inclusive, *General Federation Clubwoman*.

**Women Voters, The League of**, is a nation-wide, non-partisan organization established in 1920 to encourage citizen participation in government. Its purpose is "to promote political responsibility through informed and active participation of citizens in government. It may take action on governmental measures and policies in the public interest. The League shall not support or oppose any political party or candidate."

For over 25 years the League's work has centered around the one idea—that the strength of a democratic society lies in the political education of its citizens. Its membership totals 62,000. There are 525 local Leagues in 35 States and the District of Columbia. Headquarters: 726 Jackson Place, Washington 6, D.C.

At the Convention held in Kansas City in 1946, a program for the next two years was voted. The suggestions for the program had come from the membership through the League's unique program-making procedure. They had been studied and discussed in the 525 local Leagues so that delegates to the Convention were familiar, not only with the subjects, but with the opinion of the League members toward them.

The Current Agenda for the next two years as adopted by the Convention was

- I. International Control of Atomic Energy Through United Nations. Domestic Control Under a Civilian Agency to Insure Full Development in the Public Interest
- II. Acceptance by the United States of Its Full Share of Responsibility for Strengthening the United Nations
- III. Strengthening the Organization and Procedures of the Congress
- IV. Government Economic Policies Which Will Prevent Inflation and Deflation and Stimulate Production and Employment

The work of the League in stimulating and fostering the growth of the individual citizen, is done in many different ways and varies with the individual League. Discussion groups, campaigns to arouse the public to thinking about a problem of government, are devices used everywhere. Doorbell ringing campaigns, window displays, voters booths, public meetings, are only some of the techniques used.

**Woodrow Wilson Foundation, The**, founded December, 1922, to promote the Wilsonian concept of international organization and world cooperation. It is a non-membership organization. President, Marion E. Park, Vice President, Frank Altschul. Secretary, Mrs. Henry Goddard Leach, Executive Director, Mrs. Burnett Mahon. Headquarters, Woodrow Wilson House, 45 East 65th Street, New York 21, New York. The Foundation publishes the *United Nations News*, a monthly report on the United Nations and Specialized Agencies. The Woodrow Wilson Award for Distinguished Service was given to Hon. Henry L. Stimson and Sean Lester, Secretary General of the League of Nations.

**World Alliance for International Friendship Through the Churches**, founded in 1914 to promote international goodwill and peace. Membership, about 1,000. President, Rt. Rev. G. Ashton Oldham, General Secretary, Henry A. Atkinson. Headquarters, 70 Fifth Avenue, New York 11, New York. The organization publishes a monthly *News Letter*, *Pattern for Peace*, *Catholic, Jewish, and Protestant Declaration on World Peace, Crossroad of Conflict*, *World Alliance, Purpose and Program*. First meeting of International Committee of World Alliance held in July, 1946, in London, England. The American Council's Annual Meeting was held in Indianapolis, Indiana, in November, 1946.

**World Calendar Association, Inc., The**, founded in 1930 to study the defects of the present calendar and to educate the public on the benefits of calendar revision and the advantages that would result from adoption of The World Calendar, a perpetual stabilized balanced calendar, always the same, of twelve months with increased emphasis on the division of the year into four equal quarters. President, Elisabeth Achelis, Vice President, Charles S. McVeigh. Secretary-Treasurer, Harriet Lillie. Director, Westy Egmont. International Headquarters, International Building, 630 Fifth Avenue, New York 20, New York. The World Calendar Association publishes the *Journal of Calendar Reform*, a quarterly periodical, of which Westy Egmont is the Editor. The World Calendar has been approved by fourteen nations, many organizations and distinguished scientists, scholars, economists, businessmen, religious leaders, and government officials. During the year 1946 legislation was introduced in both the House of Representatives and the Senate of the Congress of the United States for adoption of The World Calendar. Elisabeth Achelis and Westy Egmont were accredited by the United Nations as representatives of The World Calendar Association. The interest of The World Calendar Association in a wide variety of subjects being handled by separate commissions was noted by the Economic and Social Council of the United Nations. The World Calendar was on the agenda of the Inter-American Economic and Social Council of the Pan American Union.

**World Peace Foundation**, established in 1910 to promote international order and peace through publications, study groups, and a reference service. President, Harvey H. Bundy. Director, Raymond Dennett. Chief of Reference Service, Marie J. Carroll. Headquarters, 40 Mt. Vernon Street, Boston 8, Massachusetts. The Foundation published in 1946, volume VII of *Documents on American Foreign Relations*, edited by Leland M. Goodrich and Marie J. Carroll. *The United Nations in the Making: Basic Documents*, second edition, *United Nations Economic and Social Council*, by Dr. Herman Finer, *Charter of the United Nations: Commentary and Documents*, by Leland M. Goodrich and Edvard Hambro, second printing with index. The following titles are scheduled for 1947:

volume viii of *Documents on American Foreign Relations*, edited by Raymond Dennett and Marie J. Carroll; volume ii of *War and Peace Aims of the United Nations*, edited by Louise W. Holborn.

Beginning in February 1947 the first number of a new magazine *International Organizations* will make its appearance under the editorship of Raymond Dennett. Two other numbers will be issued during the year, May and September. Articles on the problems involved in the development of international public institutions, by outstanding leaders and scholars, factual summaries of the work of the United Nations, the I.L.O., and other international organizations, such as the International Bank, and the Food and Agriculture Organization, official documents and a selective bibliography will make up the contents of this unique periodical designed especially for students and teachers in the field of international relations.

**Young Men's Christian Associations, The National Council of (Y.M.C.A.)**, formed as a national committee in 1866. The first local organization was formed in London, in 1844 (in the United States in 1851), for the physical, mental, social, moral, and religious education of youth. Membership: 1,411,341 in 1,345 local Associations. President: Kirtley F. Mather. General Secretary: Eugene E. Barnett. Headquarters: 347 Madison Avenue, New York 17, New York. Highlight of 1946 was the forty-fifth International Convention, the first in ten years, which challenged the Associations of Canada and the United States to raise \$8,650,000 for reconstruction of war-ravaged Y.M.C.A.'s around the world, and for meeting war-occasioned needs at home. Since 1889 North American Y.M.C.A.'s have aided expansion of the Movement in thirty-two countries through a world service program. In American Y.M.C.A.'s there was during 1946 steady progress in reconversion from war to peacetime services, with special efforts to assimilate veterans and ex-prisoners-of-war in on-going counseling, school, health, informal education, and social programs. Service to the armed forces continued in twenty-two Army and Navy Y.M.C.A.'s and one hundred fourteen Y.M.C.A.-operated USO clubs. The program of the Student Christian Associations expanded to meet the needs of the thousands of veterans returned to college campuses. Work with children and adolescents in Y.M.C.A.-sponsored school and neighborhood groups and camps continued to grow. Youth of eighteen states studied citizenship by actual practice in government through the Y.M.C.A. Youth and Government program. The Association continued the policies of assisting youth and adults to play their part as Christians in the struggle for freedom, and a world of justice, peace, and order; sharing with churches, educational and government agencies in creating a public opinion that will assure acceptance by Americans of their responsibilities in the world order; and joining with other Christian movements in education and motivation of youth for the practice of democracy at home, as between groups based on race, color, religion, or economic distinction.

**Young Women's Christian Associations of the United States of America (Y.W.C.A.)**, established in 1906 to advance the physical, social, intellectual, moral and spiritual interests of young women. Membership about 670,000. President: Mrs. Arthur Forrest Anderson. General Secretary: Mrs. Harrison S. Elliott. Headquarters: 600 Lexington Avenue, New York 22, New York. In March of 1946 the Y.W.C.A.'s of the United States held their seventeenth national convention in Atlantic City, New Jersey, after an interval of six years. In addition to the more than 2,300 delegates from the Y.W.C.A.'s in the United States, there were present forty-nine representatives and guests from twenty-six foreign countries. The convention adopted a Public Affairs Program for the next three years, embracing such subjects as International Relations, Civil Liberties and Democratic Rights, Social and Economic Welfare, Minority Groups, Education, Public Health and Special Problems of Youth. A report of the Commission to Study Interracial Practices in Community Y.W.C.A.'s was discussed and an Interracial Charter adopted looking toward a forward move in the whole matter of interracial practices. A fund of at least \$2,000,000 for a program of reconstruction of Y.W.C.A.'s in other countries and a fund of \$500,000 for the extension of Y.W.C.A. work in the United States were also voted by the convention. In 1946 the Y.W.C.A. in the United States served nearly 3,000,000 women and girls by providing through its 1,523 local centers, housing, food service, educational and recreational activities, and other services specially designed to help them live as Christian individuals and citizens in the postwar world.

**Youth Hostels, Inc., American**, founded in 1934 to help all, especially young people, to greater knowledge, understanding, and love of the world by providing for them Youth Hostels (inexpensive overnight accommodations) in America and by assisting them in their travels both here and abroad over bike trails, foot paths, and highways. Membership: over 115,000. President: John G. Winant. Treasurer: Anthony D. Duke. National Directors: Isabel and Monroe Smith. Headquarters: Northfield, Massachusetts. During 1946, 100 young people (AYH Europe Reconstruction groups) went abroad to recon-

struct bombed youth hostels, taking with them their own food, supplies, bicycles, etc., in order not to be a drain on meagre food supplies. Plans are being made for similar groups to go to Europe in 1947.

**Youth Problems, Committee on**, appointed by the American Council on Education in 1942 to implement the findings of the American Youth Commission, and to form a rallying point for the many and worthy organizations carrying on youth programs, both governmental and non-governmental. Chairman: Henry I. Harriman. Secretary: Francis J. Brown. Headquarters: 744 Jackson Place, Washington 6, D.C. The original American Youth Commission was set up in 1935 by the American Council on Education with funds granted by the General Education Board, to study and evaluate factors relating to the care and education of American youth. With publication of its final report, *Youth and the Future*, in January, 1942, the work of the Commission was completed, and with its disappearance it was apparent that there was no one group left in the field whose interest was not centered upon some one segment of the youth population of the nation. For this reason the Committee on Youth Problems was founded. Publications: *Color, Class, and Personality*; *Youth and the Future, Working with Rural Youth*; *Youth in the CCC*; *Barriers to Youth Employment*; and 20 other titles.

**Zionist Organization of America**, founded in 1897 to enlist public support for the reconstitution of Palestine as a Jewish Commonwealth and to foster a program of Jewish culture renaissance. Membership: 200,000, exclusive of membership of affiliated and constituent organizations. President: Dr. Abba Hillel Silver. Executive Director: Dr. Sidney Marks. Headquarters: 41 East 42nd Street, New York 17, New York. The Zionist Organization of America is the main instrumentality of American Jewry for the upbuilding of Palestine as the Jewish National Home. To this end, the organization carries out a nationwide program of public enlightenment and education on the aims of the Zionist movement designed to acquaint the American public with the achievements of the Jewish community of Palestine and to enlist public support for the establishment of Palestine as a Jewish state. It also conducts a network of cultural projects aimed at the mobilization of all segments of American Jewry behind the upbuilding of Jewish Palestine. The forty-ninth annual convention was held in Atlantic City, New Jersey, on October 25-29th, 1946.

**Zonta International**, a classified service club of executive business and professional women, organized in Buffalo, New York, in 1919. There are one hundred fifty-eight clubs in Canada, Denmark, Hawaii, Iceland, Sweden, and the United States with approximately 5,500 members. Main objectives are community service; encouragement of high ethical standards in business and the professions; improvement of the legal, political, economic, and professional status of women, and the advancement of international understanding, good will, and peace through a world fellowship of executive women. Zonta's chief service is constructive and educational work with women and girls and includes: youth centers, nursery schools; cooperation with juvenile authorities, health and social welfare programs; improved facilities for women and girls; encouragement to older business women; vocational counseling; and scholarships and loan funds for students. The Amelia Earhart Scholarship, in memory of the United States aviatix and Zontian, is awarded annually to a young woman qualified for graduate study in aeronautics. Three awards were granted in 1946, one of them to a young woman from Sweden, the first award won by a person outside the United States. In promoting educational work for girls, Zonta is sponsoring a new radio program on vocational counseling, bringing as its guests top women from each vocation to answer the questions of girls interested in choosing their life work. Another valuable 1946 contribution in the field of world peace and the status of women was the November 8 radio program, short-waved to all parts of the world, with Mrs. Bodil Begtrup of Denmark, chairman of the UNO Commission on the Status of Women, as the guest of Zonta International. International Headquarters: 59 East Van Buren Street, Chicago 5, Illinois. Executive secretary: Harriet C. Richards. Mrs. Lucile D. Edgar is editor of *The Zontian*, official publication.

**SOCIOLOGY.** The end of the war and the subsequent rapid increase in college enrollments has meant a return of many sociologists from wartime assignments to college campuses and increased attention to graduate and undergraduate teaching. Developments during 1946 indicate that the war experience may have increased the emphasis on cooperation among various disciplines, rather than compartmentalization. College courses which utilize the materials of more than one of the Social Sciences are increasingly being developed and there

is a growing number of research projects which involve cooperation among the Social Sciences.

One development along this line is the establishment of a new Department of Social Relations at Harvard University. This Department incorporates all of the former Department of Sociology, that part of the Department of Psychology which dealt primarily with social and clinical psychology, and that part of the Department of Anthropology which was concerned primarily with social anthropology. The announcement of this new Department states "... there has been developed, especially since the last decade, the synthesis of socio-cultural and psychological sciences which is widely recognized within the academic world in spite of the fact that there is no commonly accepted name to designate the synthesis. We propose that Harvard adopt and thus help establish the term 'Social Relations' to characterize the emerging discipline with the body of fact and theory traditionally recognized as the subject matter of sociology, but also with that portion of psychological science that treats of the individual within the social system and that portion of anthropological science that is particularly relevant to the social and cultural patterns of literate societies. The recent war greatly accelerated the fusion of research activities in this common territory. Work on wartime projects virtually obliterated distinctions that were already breaking down between social scientists engaged in the study of fundamental problems of social relations." The Department, in addition to its teaching functions, will conduct a laboratory of social relations which will provide physical facilities for many types of psychological and social research, offer training to students in empirical, statistical, and field methods of investigation and serve as a center for the development of various cooperative programs of research.

Other large-scale cooperative research projects under way are those of mental health needs in Ohio, a study of Wisconsin's cultural backgrounds, and the studies in a number of government departments. A study of refugees and their adjustments was completed during the year, and the first volume of the report on an extensive study of the evacuation and relocation of Japanese in this country has been issued.

Many students are turning to an analysis of wartime experiences and wartime developments. The Census of Research conducted at mid-year and reported in the August issue of the *American Sociological Review* indicates a large number of projects in which the student is utilizing data collected in connection with the war effort. Perhaps the major work of this type is the analysis of the social psychology of American troops, based on the extensive surveys conducted by the Army during the war on all phases of the soldiers' activities. This includes experiments in communication, especially with respect to Army orientation and training. The Department of Agriculture Appropriation Bill includes a proviso which prohibits the use of any of the funds for "cultural surveys." The immediate occasion for that proviso was a group of studies of contemporary rural culture in a number of sample areas, carried on in the Bureau of Agricultural Economics.

In the Congressional debate revolving around the National Science Foundation, one of the major issues turned out to be the inclusion or exclusion of the social sciences in the activities of the Foundation. One of the later versions of the bill provided for a Social Science Division but indicated that its first endeavors should be a definition of

functions in relation to the major objectives of the Foundation. However, the bill as it passed the Senate omitted the Social Science Division, but even this bill was ultimately lost in the House.

The dissolution of the War Relocation Administration brought to an end the sociological and cultural studies of the relocation process and the "communities" established by the relocated individuals which that agency had conducted. It had given an outstanding illustration of the way in which studies of that type could be used in the administrative process.

The establishment of a surveys division in the Veteran's Administration marks the major development so far as government agencies are concerned. The division will conduct surveys of attitudes, opinions, and needs of various segments of the veteran population and of the personnel of the Veteran's Administration. It is intended that its work will be used primarily in planning and controlling operations.

Growing attention is being given to the field of opinion and attitude surveys, building to a large extent on the impetus given to this work during the war. The University of Michigan has announced the establishment of a "Survey Research Center" to provide facilities for social and economic research and for student training in survey techniques. In addition to conducting surveys of economic and social problems, the Center will provide graduate training in the method of making such surveys and will carry on a research to improve survey procedures is intended "to secure data that will help to integrate the social sciences."

Word was received that Professor Halbwachs of the University of Strasbourg had died in the concentration camp of Buchenwald. Death also removed from the ranks of practicing sociologists Earle Edward Eubank, particularly known for a study of concepts of sociology; Edward Byron Reuter, who had published studies in race problems and population problems, and C. E. Elwood, especially known for his books in social philosophy and for a widely used series of high school and introductory college texts.

CONRAD TAEUBER.

**SOIL CONSERVATION SERVICE.** An agency of the U. S. Department of Agriculture, established in 1935. The Service promotes soil and water conservation, better soil utilization, and erosion control in agriculture, by supplying technical material and equipment to soil conservation districts organized under State laws and operated under local farmer direction. It also supervises the work programs of Civilian Public Service camps assigned to soil conservation activity. As of December 15, 1945, 1,440 soil conservation districts had been organized, including approximately 794,011,196 acres and roughly 3,615,979 farms. Under the guidance of the Service, drainage operations are performed on lands which thus can be made suitable for sustained production, and technical assistance is afforded to irrigation enterprises.

In cooperation with other agencies, the Service undertakes studies of the country's watersheds, preliminary to possible flood control operations on agricultural land. Agricultural lands which are sub-marginal or not primarily suitable for cultivation, are purchased by the Service and improved and managed to bring about needed land-use adjustments. Purchases aggregate over 11,297,000 acres. Of this, the Service manages 7,141,000 acres.

The Service undertakes water-resources studies to determine the feasibility of proposed flood-con-

trol, multiple-purpose, and agricultural water projects, and makes the data pertaining to them available to other agencies and enterprises for the correlation of water projects of mutual and public interest. Chief: Hugh H. Bennett.

**SOLID FUELS ADMINISTRATION FOR WAR.** An Agency established in the Department of the Interior by executive order on Apr. 19, 1943, which absorbed the preceding Office of Solid Fuels Coordinator for War. It centralizes government policies and activities pertaining to bituminous and anthracite coals and certain other solid fuels, utilizing the other agencies of the Department of the Interior in discharging its functions. The Administrator, who is the Secretary of the Interior, issues policy and operating directives to units of the solid fuels industries, recommends to the WPB any necessary program for wartime distribution or materials needed, and advises with the OPA on rationing and price adjustments, requests action from the War Manpower Commission when labor shortages threaten necessary wartime production, etc.

**SOMALILAND.** This lowland region lying east and south of the Abyssinian Plateau in the Horn of Africa is not a political unit, but is divided under French, British, Italian and Ethiopian sovereignty. Its area exceeds 375,000 square miles, with a population of more than 2,500,000. The region, despite its political fragmentation, has a geographic, ethnic and cultural unity. Its inhabitants are the Somali people who live a largely nomadic and pastoral life in a semi-desertic environment. Of Hamitic origin, they have a common language and are Moslems. There is no appreciable nationalist sentiment among them now, but their common background may give rise to one in the future. See separate articles on ETHIOPIA, FRENCH SOMALILAND, BRITISH SOMALILAND, and ITALIAN SOMALILAND.

**SOUTH AFRICA, Union of.** A self-governing dominion of the British Commonwealth of Nations, composed of four provinces. Area, 472,494 square miles. Population (1946 census), 11,259,000, of whom 2,335,000 were Europeans. Seat of the government, Pretoria; seat of the Legislature, Cape Town.

**The People.** Europeans form about 20 percent of the population of the Union of South Africa. Natives are the largest group (68 percent), while Cape-colored make up 7 percent and Indians three. Approximately 46 percent of the Europeans speak Afrikaans, 39 percent English, 3 percent English and Afrikaans, and the remainder German and Yiddish.

State-aided and state-conducted schools for Europeans are adequate in number, but schools for the native population are relatively fewer. The Union has five universities, with a total enrollment of 13,059 students in 1944. The religious affiliations of the European population at the time of the 1936 census were: Dutch churches, 55 percent; Anglican, 19 percent; Methodist, 8 percent; with the remainder largely Roman Catholic, Jewish and Presbyterian.

**The Economy.** Gold mining, which occupies four-fifths of the country's employed population and normally furnishes more than 70 percent of the value of all exports, is the country's most important business. South Africa stands first in the production of diamonds as well as in gold. Coal, copper, tin, iron, and manganese are also important mineral products. The raising of sheep and goats occupies a considerable sector of the population, and agri-

culture proper produces cereals, citrus fruits, sugar, wine, tea, tobacco, and a variety of other products. Manufacturing has made great progress in recent years, and further extension is under way, especially in iron and steel.

**Government.** Executive power is vested in the Governor-General, appointed by the Crown upon the recommendation of the South African Government, and in the Executive Council (Cabinet) which is responsible to Parliament. Parliament consists of a Senate of 44 members, eight elected from each province, eight appointed by the Governor-General and four elected by the native population; and a House of Assembly of 150 members elected from the provinces roughly in proportion to the white population, and three members elected by the natives who are on the Cape Native Voters' roll. Governor-General, Major Gideon B. van Zyl, assumed office 1946. Prime Minister, Field Marshal Jan C. Smuts.

**Events, 1946.** The problem of the Indian minority in South Africa, the occasion of difficulties of long standing, caused South Africa much concern in the spring of 1946 and reached the organizations of the United Nations in the autumn. The 250,000 or more Indians, settled largely in the province of Natal and especially in the city of Durban, to which Indians had been brought in 1860 as indentured workers in the sugar fields, were prevented by the Pegging Act of 1943, which applied to Durban only, from owning and occupying property in European areas. A reciprocal provision applied to Europeans. (See YEAR BOOK for 1945, p. 562.)

As the Pegging Act was to expire on March 31, 1946, the Government prepared a bill, called the Asiatic Land Tenure and Indian Representation Bill, to replace it. This bill, introduced by Prime Minister Smuts in Parliament in March, extended the control of dealings in fixed property between Asiatics and non-Asiatics and the occupation of fixed property to the whole of Natal. By this bill the permission of the Minister of the Interior was required if Asiatics were to acquire or occupy land outside certain exempted areas. The occupation provisions were extended to the Transvaal, where acquisition of land was already controlled.

The franchise provisions of the bill gave the Indians of Natal and the Transvaal joint representation by two Senators, one elected by the Indians and one appointed by the Government. In the Assembly they were entitled to three members.

**Indian Opposition.** Indians in South Africa organized opposition to the "Ghetto Bill," as the Asiatic Land Tenure and Indian Representation Bill was termed by them, throughout the year. Passive resistance was the chief weapon used. The Government of India gave notice that it would break off trade relations with South Africa and decided in April that if the bill was passed it would bring the whole question of Indians in South Africa before the United Nations. The formal notice terminating India's trade with South Africa could not take effect until June 24, but exporters in India promptly put on their own embargo and in May South African farmers were already unable to obtain jute and gunny bags for shipping their crops, as well as cotton piece goods and spices.

After the bill was passed Indian passive resistance began in South Africa. On an appointed day in June Indian business houses closed their doors and meetings for prayer and protest were organized. White youths attacked Indian passive resisters camping on vacant lots and the police were called out. Passive resistance continued, however.

In June India sent the threatened protest to the General Assembly of the United Nations and the economic effect of the trade boycott became more severe.

**United Nations Discussion.** The Indian-South African dispute was the first major issue to confront the General Assembly of the United Nations in New York in October. On the second day of the session, October 24, General Smuts demanded that the protest be removed from the agenda. Instead, it was referred to the Political and Legal Committees of the Assembly. At about the same time a delegation from the South African Indian Congress Party left Pretoria to aid the Government of India in the New York sessions.

Almost immediately the situation became more complicated for the South African delegation by the introduction of the issue of South West Africa, the South African mandate desired by South Africa for annexation. The delegation from India at once introduced the Indian minority question into the discussions, and General Smuts retaliated by calling the treatment of the depressed classes ("untouchables") in India "the most terrifying phenomenon of the modern world" and alleging that hundreds of thousands of Indians would be glad to escape from their country into South Africa if the latter lifted its immigration bars.

In the first public airing of the dispute, in the meeting of the Joint Political and Legal Committees on November 21, a number of nations, including the three Russian nations and China, backed India's charges of racial discrimination, as a violation of the "human freedoms" sections of the United Nations Charter. General Smuts argued that unless the United Nations stayed away from domestic matters many countries would find their position in the organization "impossible and intolerable."

The discussion aroused great bitterness throughout, and the settlements reached were scarcely definitive. On December 8, by a vote of 32 to 15, with seven member countries abstaining, the General Assembly passed a resolution requiring both India and the Union of South Africa to report to the next session on measures to ameliorate conditions of Indians in the Union. On December 14 the incorporation of the territory of South West Africa into the Union of South Africa was rejected by a vote of 37 to 0, with 9 abstentions. At home in South Africa Indian communities celebrated the decisions and other sections of the non-white population organized to obtain further political rights.

**Activities of Prime Minister Smuts.** The Prime Minister took his usual active part in other international conferences of the year and in Commonwealth deliberations. In February he urged Parliament to ratify the United Nations Charter, a step which was taken unanimously on February 7. In May General Smuts was in London for the conference of Dominion Prime Ministers.

After a return to his own country for participation in House of Assembly sessions, the Prime Minister went to Paris for meetings of the Peace Conference, where he took his familiar place as the leading veteran of the Versailles Peace Conference. On this European visit he addressed also the Upper and Lower Houses of the Dutch Parliament, a joint session of the Belgian Houses of Parliament, and groups in London. In October he was in New York for United Nations sessions and back in South Africa by way of London on December 17.

**Political Difficulties.** The question of Nazi sympathizers in South Africa was only partially resolved in 1946. The issue still lay between the pro-war and anti-war groups of September, 1939, when

Prime Minister Smuts carried the day and South Africa entered the war against Germany. It tended to crop up in local elections in 1946, although in the House of Assembly Smuts' United Party maintained its considerable majority over the Nationalist opposition party.

In May the House of Assembly accepted the Government's motion that a Parliamentary committee should inquire into allegations that during the war Dr. Daniel F. Malan, leader of the Nationalist opposition, consented to receive German agents but did not notify the authorities of the fact. The action apparently caused some apprehension among South Africans who sympathized with the Nazis, for rumors spread that the occupation authorities had uncovered incriminating documents in Berlin and that it might be necessary for certain South Africans to go into hiding or get themselves smuggled over the border. The committee, after investigation, exonerated Dr. Malan of all important charges.

**Preparations for Royal Visit.** In March, 1946, it was announced in London that the Royal family would visit South Africa early in 1947. In December, 1946, many details of the three and a half months' tour by the King, Queen, and Princesses were available. At the height of the Indian-South African dispute at United Nations meetings some Negroes, Indians, and Communists in South Africa threatened to boycott the trip, and at the end of the year the attitude of non-Europeans remained uncertain.

Because of the color bar, the social arrangements for the tour presented many difficulties. In most cases the difficulty was solved by mentioning the appearance of their Majesties at "a gathering of non-Europeans."

**Industrial Disputes.** The gold mining industry in South Africa, which employs about 360,000 Africans and about 40,000 Europeans, experienced strikes in the course of the year. The most serious dispute broke out in August, when about 50,000 natives went out. According to a statement issued by the organizing body, the African Workers' Union, the strike was called because of the intransigent attitude of the Chamber of Mines towards the legitimate demands of the workers for a minimum wage of 10 shillings a day and better conditions of work.

In the steel mills the methods of white strikers were adopted for the first time in July, when Negroes picketed steel plants in the Transvaal, preventing their operation. The demand of the workers was for a wage increase of four cents an hour. Throughout South Africa the rising cost of living was disturbing the standards of the many employees, especially non-Europeans, whose wages had not been altered for many years. Also, many workers protested against the compound system and exclusion from social legislation.

A new gold find in the Orange Free State in April, at a point a few miles south of Odendaalsrust, provided the excitement and activity always found in such instances. Speculation in land followed the common pattern. In general, however, the gold industry was disturbed by the problem of rising costs. The opening of the new gold fields, together with other industrial activity in South Africa, caused an intensification of the demand for more immigrants of European origin.

ALZADA COMSTOCK.

**SOUTH AMERICA.** A continent comprising 10 republics (Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay, and Vene-

zuela) and three colonies (British Guiana, French Guiana, and Surinam). Total area, about 6,937,445 square miles (17,968,000 square kilometers). Estimated population, 88,680,000 on January 1, 1940.

**SOVIET LITERATURE.** The principal themes that attracted the attention of Soviet literature in 1946 were connected with the experiences of the war that was just over and assimilation of them; they were the themes that reflected the hopes and dreams of the people concerning the postwar world. Parallel to these broader problems of literature, questions of an ethical and moral nature—friendship, love and family—questions of the upbringing of the rising generation, and so on, were treated. As formerly, the basic method in Soviet literature is socialist realism. Typical of the literature of 1946 were the redoubled efforts to find a synthetic embodiment in artistic form of the best traits and qualities of the new characters who came into existence with the Revolution in Russia, who built up socialism and defended in battle all they had won.

Following the established tradition in Russia, practically all books of importance are published in the first place in the literary monthly magazines. Most influential of these are the Moscow *Novy Mir* (New World), *Znamya* (Banner), *Oktyabr* (October), and Leningrad *Zvezda* (Star). Literary magazines, almanacs, and papers are published in Kiev, Minsk, Tallin (*Looming—Creation*), Vilnius, Tashkent, and other centers. Soviet Books should be mentioned as one of the new monthly periodicals devoted to criticism and bibliography. *Culture and Life* is a new paper that gives a great deal of space to questions of literary criticism and theory. *Literary Gazette* remains as before the organ of the Soviet Writers Union.

**Literary Events.** Several notable literary occasions were marked in 1946; two were the jubilee dates of Feodor Dostoevsky and Nikolai Nekrassov, poet of revolutionary democracy. Sessions, meetings, concerts, recitals, and articles in the press, were devoted to the memory of the founder of Soviet literature, Maxim Gorky; also of the popular novelist Nikolai Ostrovsky, author of *How Steel Was Tempered* and *Born of Storm* (in connection with the tenth anniversary of his death). The 25th anniversary of the death of the poet Alexander Blok was observed. A special session of the U.S.S.R. Academy of Sciences marked the 40th anniversary of the death of the great Scandinavian classicist Henrik Ibsen. A compilation of the works of the Kazakh peoples' poet, in Kazakh and Russian and translation in other languages spoken in the U.S.S.R., was timed to appear for the 100th birthday of the late Jamboul. The 50th birthdays of poets Nikolai Tikhonov and Pavel Antokolsky were marked in 1946 and they were awarded orders for their services to literature. The completion of 40 years of literary work by the Byelorussian poet Yakub Kolas was marked in Minsk and Moscow.

*History of Greek Literature and History of English Literature* (Part II, Vol. I), were published by the U.S.S.R. Academy of Sciences and a two-volume research work, *History of Literature in U.S.S.R.*, was prepared for the press. Twice in 1946, Stalin Prizes were adjudged for the best work in literature and art (for years 1943, 1944 and 1945). Among the prizewinners were Alexei Tolstoi (awarded for his tragedy *Ivan the Terrible*), V. Shishkov (for *Emilian Pugachev*, historical novel of the peasant war in Russia in the 18th century), and Vladimir Soloviev (for his drama *The Great Sovereign*, on Ivan the

Terrible). Stalin Prizes were also awarded for *Young Guard*, the novel by Alexander Fadeyev; for *Navoi*, Uzbek historical novel on Alisher Navoi, the great poet and humanistic philosopher, by Aibek; for *Days and Nights* by Konstantine Simonov; for *Two Captains* by V. Kaverin; *Unconquered* by Boris Gorbato; *Simply Love* by Wanda Wasilevska; *Green Earth* by the Latvian writer, Andrej Upts; *Son of the Regiment* by Valentine Katayev; *Twelve Months*, drama story by Samuel Marshak; *Those at Sea*, play by Boris Lavreniev; *Pulkovo Meridian*, long poem by Vera Inber; *Flag of the Brigade* by Arkady Kuleshov; *Son*, a long poem by Pavel Antokolsky; volumes of lyrics by the Ukrainian poets L. Pervomaisky and N. Bazhan, and by the Armenian poet Avetik Isaakyan; and for translation of Dante's *Divine Comedy* by Mikhail Lozinsky.

**Journalism and Memoirs.** In 1946 fewer articles appeared than during the war, but more volumes of memoirs, diaries of eyewitnesses, and narratives of people who had seen and experienced a great deal. Books by partisans who fought in the enemy rear were particularly interesting. Outstanding successes were Major-General Kovpak's (two-star hero of the Soviet Union) diary *From Putul to the Carpathians*, and the reminiscences of G. Lunov who fought at the head of Belorussian partisans, and those of P. Ignatiev, commander of a North Caucasus partisan detachment. Petro Vershigora's book, *People With Clear Consciences*, which may be placed in the same series, is written with the ability of a professional writer. A very moving volume of letters and diaries of men who were killed at the front was completed under the title of *Soldiers' Life*. A volume of *Letters from the Front* came out in the Turkmen language.

Many descriptive articles on travels abroad were contributed to magazines by Soviet journalists. *Roads of Europe and American Impressions* were two series by Ilya Ehrenburg. Anna Karavayeva wrote *In France*, and M. Mendelson a very interesting article on *Mayakovsky on America*. The general interest shown in these themes is legitimate and understandable: the Soviet people want to know as much as possible about the friends with whom they fought against fascism.

As in other years, books of a biographical nature appeared in the series *Lives of Remarkable People*. A book on the great Russian physiologist, Ivan Pavlov, was published by N. Popovsky, author of *Inspired Seekers*, an account of Russian surgeons and bacteriologists. Alexander Dovzhenko, noted film producer, wrote the film story *Earth in Bloom* about the life of the Russian horticulturist and innovator, Michurin. *The Life of Stone*, a fascinating story of the valuable minerals in the U.S.S.R. by Professor Fersman, Member Academy of Sciences, was republished.

Reminiscences of Sergei Alliluyev, old worker and revolutionary, won general appreciation. Elena Koshevaya, mother of a leader of an anti-fascist youth organization, a boy of 16 who died a heroic death during the war, wrote a very moving *Story of My Son*.

**Poetry.** A number of young and talented poets who have entered this field have their own poetic voice; they are men from the front who grew to maturity and whose abilities were formed in war. Among them were S. Gudzenko, M. Lukonin, A. Mezhirov, A. Nedogonov, V. Urin, P. Tereshchenko, P. Doroshko, Maria Prigara. They describe their experiences in virile verse, singing of "The Springtide of Victors," and speak with confidence of the future.

Poets of the older generation, too, have matured in the war years, as witness the most recent verses of M. Isakovskiy, A. Surkov, I. Selvinsky, A. Tvardovsky (*House by the Roadside*), Margarita Aliger (*Victory*), Pavel Antokolsky (*Third Book of War*), S. Shchupachev (*Lines of Love*, lyrical cycle), and S. Kirsanov (*Alexander Matrosoy*, long poem). Among the leading Soviet poets are also the Georgian, G. Leonidze, Stalin Prize Winner; Ukrainians, Pavel Tychina, Member of the Academy, M. Rylsky and N. Bazhan; Lithuanian, Prof. Kostas Korsakas (whose volume of verse *Birds Return*, appeared in 1946), Estonians, Johannes Barbarusa (whose latest book of verse is called *Step by Step Towards Victory*) and Johannes Semper. Leonid Pervomaisky's *Soldiers' Songs* and wartime lyrics brought this Ukrainian poet wide recognition. The poems of Arkady Kuleshov (*Flag of the Brigade, House Number Twenty Four*, and *Cymbals*) show that this Belorussian's talent is gaining in power. Sergei Mikhailov wrote a book of original and witty fables which were beautifully illustrated by three artists who sign themselves Kukryniksi. The selected poems of Sergei Essenin were published in an edition of 57,000 copies on the 20th anniversary of his death. Some excellent translation by Samuel Marshak of epigrams and verses of Robert Burns came out. Translations of some of Shakespeare's plays were made by Boris Pasternak. Publication of the "Poet's Library" series (both large and small) was resumed. An anthology of Georgian and Azerbaijanian poetry came from the press. The Kirghiz national epic, *Manas*, was published in a splendid edition.

**Novels and Tales.** The most successful novel of 1946 was Alexander Fadayev's *Young Guard*. Critics had high praise for this excellent piece of work—a characteristic example of socialist realism. Based on historical material, *Young Guard* is genuinely fine literature that ennobles and educates the youthful reader. The second success for 1946 was Vera Panova's tale, *Fellow Travelers*, a touching story of the staff of a hospital train. *Greetings from the Front*, a tale by Valentine Ovechkin, was warmly welcomed. It reveals talent and originality in its presentation of the Soviet citizen at war, his inner world, emotional experiences, his longing to return to peacetime work.

*Tale of a Real Man* by Boris Polevoi was one of the successes of 1946 and found a wide circle of readers. The writer is well known as a war correspondent in the U.S.S.R. This book is about a disabled airmen whose hatred of the enemy and whose eagerness and will to live to be of use to his people were so strong that they overcame all obstacles. He was the pilot who had lost both legs in battle but by sheer willpower succeeded in getting back to his regiment and flying and taking part in air battles. He won the highest award. The tale carries conviction inasmuch as it is not invention but is based on fact.

The new novel, *First Joys* by Konstantine Fedin, one of the best of contemporary Russian writers, appeared in 1946. Other books that should be mentioned here are T. Vvednitsky's *Sun in the East*, about the sufferings of the Jews in the ghetto; Pavel Feodorov's *Raid*, about General Dovator, cavalry hero of legendary renown; Vsevolod Ivanov's *At the Taking of Berlin*; A. Antonovskiy's and B. Cherny's story *Angel of Peace*, about the collapse of the German piratical raids and their advancing policy in the Caucasus; Victor Nekrassov's *Stalingrad*, story of the battles on the Volga by a man who took part in them; more of Pavel Bazhov's stories based on the folklore of the Urals.

In addition to books by Soviet authors, translations of foreign authors, among them Erskine Caldwell and Louis Aragon, appeared. Publication of classics of Russian and foreign literature went on as intensively as before; the total printings of Soviet editions of M. Gorky's works reached 42,000-000 copies.

*David the Builder*, a trilogy on the history of Georgia by K. Gamsahurdi, was published in Tbilisi. A new contribution was made to Kirghiz literature by Saldibekov who wrote the novel *Temir*. In Estonia A. Antson completed his novel *Victory*. Abai by Mustar Averov is one of the first Kazakh novels. It should be explained that until recent times novels in prose were almost unknown in the literature of Central Asian peoples. The predominant genres were and remain lyric poetry and epics; an important place is taken by the improvisations of popular bards. Averov's novel is built around the life of the founder of contemporary Kazakh literature, Avai Kunanbayev, poet and educator.

Among historical novels mention must be made of *Baranov's Island* by I. Kratt, an account of the Governor of the Russian colony in Alaska at the end of the 18th century, and *Raven of Yukon* by S. Malkov.

**Drama.** Close attention was paid to questions of the drama and theater in 1946. Plays from the repertory of classics and some by foreign authors were performed in 1946. Soviet theaters staged the new plays *Under the Chestnuts of Prague*, Simonov's drama of the Slav's struggle against the fascist invaders, *Old Friends*, A. Malyugin's play on Soviet youth, *Far from Stalingrad*, A. Surov's drama of the heroism of daily work on the Soviet home front. Margarita Aliger's poetic *Tale of Truth* is performed at many theaters. *Victors*, B. Chirkov's play about Soviet commanders who directed the Stalingrad operation, was a success. A. Jakovson, Estonian, is the author of the play *Life in the Citadel* which awakened an animated response among the intelligentsia and made a stir in the Baltic Republics.

The sufferings and heroic struggle of the Jews confined by the fascists in the ghetto are shown by the Jewish poet and dramatist Perets Markish in his play *Belovetshskaya Forest Sanctuary*. Alexander Korneichuk, Ukrainian playwright and Member of the Academy, wrote two plays in 1946, the comedy *Come to Zvonkovoye* and *Dream*. Villis Lacis, Latvian author, wrote *Island Lighthouse*. Konstantine Simonov finished his play on America, *The Russian Question*.

VLADIMIR F. SHISHMAREV.

**SPAIN.** A state of southwestern Europe. Capital, Madrid.

**Area and Population.** Area, 196,607 square miles, including the Balearic and Canary Islands. The population on July 1, 1944 was 26,761,902 (26,491,166 in 1943). Vital statistics in 1943 showed 622,952 births, 338,718 deaths, 163,768 marriages. On July 1, 1944, the population of the chief cities was estimated as: Madrid, 1,140,621; Barcelona, 1,108,961; Valencia, 508,072; Sevilla, 347,997; Zaragoza, 266,483; Málaga, 258,598; Murcia, 210,617; Bilbao, 208,347; Granada, 171,036, and Córdova, 146,993.

**Government.** As a consequence of the civil and semi-international war that ended in 1939 the Spanish Republic established in 1931 was replaced by the dictatorship of Generalissimo Francisco Franco as "Caudillo" of the Empire, Chief of the State, Commander of the Armed Forces and Head

of the "Falange Española," the government party. The political group backing Franco's government includes, besides the Falange (Fascists), the Carlists (Monarchists), the Clericals and the Monarchist supporters of Prince Juan de Borbón, as well as some small independent groups of the landed aristocracy and moneyed élites. All the political parties were outlawed. Franco has exercised his power either directly or through his cabinet, or through institutions controlled by him. This year, with the purpose of appeasing the UN, Franco has tried to appear before the world with a veneer of democracy.

**Events, 1946.** To consider the principal political events of the current year, it is necessary to consider not only the activities of the group controlling the political power within Spain, but the efforts of the two other groups trying to overthrow Franco's dictatorship. These are the Monarchists, grouped around Prince Juan de Borbón, who now hope to remove Franco, although they have lent him their support up to now; and the Republican Government in exile, which represents the legitimate government displaced in 1939 by Franco's insurrection, with the aid of the Fascist forces of Hitler and Mussolini.

At the beginning of the year, the "evolution" idea, by means of which the Franco regime was to yield the power to a monarchist government, was still strong in the Spanish diplomatic circles. (See YEAR BOOK 1945, p. 566.) Lausanne, residence of Don Juan de Borbón, son of Alfonso XIII, last King of Spain, was the center of diplomatic speculation. It was reported that the pretender to the throne had a series of talks with José Antonio de Sangroniz, an old friend of Franco's and an important collaborator during the uprising of 1936. Undoubtedly, the plan was upset by the announcement made by England and the United States that they were willing to accept the French proposal to bring the Spanish case before the UN. No details were given, but the indications were that the three governments were going to clarify their diplomatic status with Spain. The Republican Government in exile had little faith in this solution, and their spokesman disagreed with the British Foreign Minister, who feared that any pressure brought on Franco would strengthen the reactionary forces around him. Early in January, Franco continued with the pretense of democracy and announced a restricted municipal election, and the lifting of the censorship, to be substituted by a "gentlemen's agreement" with the director of his controlled press. He also tried to win back the good will of the Jews, whom he had oppressed during the early years of his administration, by promising the Jewish World Congress that he would authorize the opening of synagogues in Madrid and Barcelona, and receive two thousand Jewish orphans in Spain. This latter offer was not accepted.

The Minister of Foreign Relations, Martin Artajo announced that he had successfully completed negotiations with the Italian government by which the Spanish Government would pay Italy \$250,000,000 as the price of the armaments given by Mussolini to Franco in order to defeat his own people. At the beginning this debt was set at \$1,000,000,000 and the Caudillo was paying it regularly, but when the Allied troops invaded Italy, he stopped the payments, and made the bargain with the free government of Italy. This is an acknowledgment to the world and to the UN of the help given by Fascist Italy to Franco Spain. As evidence of the political climate in Spain at the beginning of the year, it is curious to note that on New Year's Day,

members of the underground movement set a huge flag of the Spanish Confederation of Labor on a church tower in Barcelona. It took several hours for the fire brigade to climb the tower and get the flag down, to the delight of the noticeably silent onlookers.

On January 22, the United States State Department announced the approval of the sale of five surplus C-47 transport planes to the Iberian Airlines, which is owned mostly by the Government (Franco's). The sale was made by the office of the American Liquidation Commission in Paris to a Spanish purchasing commission, and it also covered the necessary equipment for the improvement of the International Airport at Madrid, to be used by American planes in their foreign operations. The State Department explained that the planes sold were not considered military planes.

Some time later, the stability of the Franco Government was shaken by a motion carried by the French National Assembly and backed by the three most important French parties, congratulating the French government on the proposal made to Great Britain and the United States that diplomatic relations with the Franco Government be discontinued.

In spite of Franco's democratic play-acting for foreign benefit, within the country he continued his suppression of democratic activities and execution of liberal leaders. Among the imprisoned were Santiago Alvarez and Sebastian Zapirain, who fought with the French underground against the Nazis before joining the movement for the liberation of their own country. Fifteen Spaniards, accused of being Communists, were tried in Madrid, among them Crisanto García Grande, who had also fought in France with the Maquis. Ten were sentenced to die. As a result of fear that the UN might intervene, the accused were charged with crimes against the life and property of Spanish citizens and not with political crimes.

Early in February, the Portuguese government announced officially that Juan de Borbón would be permitted to come to Portugal, and was going to reside in Cintra with friends. The Franco press protested against the granting of visas to the Pretender. However, observers were sent to Lisbon, among them the rightist Gil Robles, to try to contact the prince.

Another incident connected with diplomatic authorizations was the permission given by French Premier Goun to the Spanish Government in exile to reside in French territory. There was a series of events which, together with this, made Franco's position more difficult. The first was the motion approved by the Legal Committee of the UN, following the proposal of the Panamanian delegation, to invite all the nations of the world to send copies of their international treaties to the Committee, specifically excluding all Fascist countries, Spain among them. Another was the motion unanimously approved by the Executive Council of the American Federation of Labor, asking the United States State Department to sever relations with Franco and to recognize Giral's government. William Green made the following statement: "This resolution will immensely hasten Spanish evolution toward democracy. The moment is very important, especially when Argentina is controlled by Fascism, and it is urgent to establish relations of solidarity between the Latin American democracies and Spain."

The United Nations kept pressing Franco to deliver the Nazis in his territory, and the Caudillo, following his policy of appeasement, actually sent

twenty-three of them to Nuremberg to be tried, among them Hans Thomsen, who was said to be the chief of the Nazi party in Spain. Nevertheless, the less known German agents stayed on in Spain, unmolested by the police. Some of them have been incorporated by Franco into his Secret Police and Foreign Legion. The Vichyite Ministers, Gabolde and Abel Bonnard, have had better luck, for since they were claimed by France and not by the UN, Franco has refused to yield them. A similar policy was followed with Leon Degrelle, the Belgian Fascist, who has been living peacefully for more than a year in San Sebastián.

The publication by the United States State Department of the *Blue Book* on Argentina was a serious blow to Franco in mid-February. In addition to the evidence of the friendly relations between Spain and Argentina, the *Blue Book* revealed the offer made by Eduardo Aunós, chief of the Spanish Economic Mission in Argentina in 1942, to sell the Argentine government German arms and ammunition. Franco's press, especially *ABC*, *Arriba*, *Informaciones*, and *El Pueblo* were instructed to deny the charges, which they did, combined with bitter attacks against Spruille Braden. Officially, Franco's government was more cautious and only hinted that Aunós, if he had made the offer, had done so as a private individual and not as a representative of the government.

In the same month, the official Spanish press published that there were strikes in Barcelona, in the textile and metal industries. The Governor of Barcelona announced the successful termination of the strike, involving more than 150,000 workers. The news given out after the strike indicated that Franco's government was not as willing to use force against the workers as in the past, and had been forced to accept the workers' demands and even to pay their wages during the strike. Apparently, the underground organization of the Unión General de Trabajadores (UGT) and Confederación General de Trabajadores (CGT) was still functioning beneath the false vertical syndicates created by Franco.

At the end of February, the Loyalist press declared that the monarchist intrigue among the officers of the army had forced Franco to deport General Alfredo Kindelán, who had been one of his staunchest supporters. Early in March it seemed that the Spanish problem was reaching a crisis, due to the execution ordered by Franco, of ten Spanish Loyalists who had served with the underground forces in France. Public opinion in France by means of parades and public meetings protested violently. In Paris, there was a meeting at the Vélodrome d'Hiver, parades in front of the Spanish Embassy, and the French Government closed the frontiers with Spain, sent an energetic note to the American and British Governments insisting on a solution to the Spanish problem; and announced their intention of bringing the matter before the Executive Council of the UN. Franco, in retaliation, also closed his frontier with France, and moved his faithful Moorish troops to the border.

Public opinion in the United States was also upset by the Spanish situation, and in the Loyalist circles, there was a rumor of an American declaration in favor of a joint statement with England and France, favoring a democratic government in Spain.

The British Government announced on March 2 that it favored the joint declaration, and that the Laborite Government was considering the French proposal to bring the case before the UN. The Caudillo immediately held a meeting of his Council of Ministers, and made an appeal to the people

of Spain to support his administration and defeat the campaign against him, which he called a Communist plot, instigated by Russia. He reproached France, with which he claimed he had practiced a "good neighbor" policy, by remaining "neutral" during the Nazi occupation. Franco conveniently forgot that he was dickering with Hitler for a piece of French territory, and that Hitler turned over to him a number of Republican refugees. Franco ended by accusing the French government of trying to interfere with the internal affairs of Spain.

Public opinion was so strong against Franco, even in the United States, that Cardinal Spellman, who had announced his intention of visiting Spain on his return from the Vatican, refused to participate in any official ceremony offered by the Spanish government during his brief stay there.

At the end of the month, the international situation looked rather more favorable to Franco, because the British and American governments announced that they did not consider it necessary to bring the Spanish case before the Security Council of the UN, basing their decision on the fact that, according to their knowledge, it was not a threat to world peace. Nevertheless, the United States asked the French Government to submit the case to the Security Council if they had any evidence to the contrary. This gave Franco courage to make more serious accusations against France, claiming that the government of Gouin was organizing, with Communist aid, a school in Toulouse to train special saboteurs, to be smuggled across the Spanish border, to attack his regime.

On April 29, and after long debates, the Security Council, following an Australian proposal, created a Sub-Committee to investigate the Spanish case. The Committee accepted the Polish proposal to set a dead-line of May 30 for a decision. Members of the Committee were the delegates of Poland, Australia, China, Brazil, and France. The Mexican delegate to the Security Council, together with the Polish and Russian delegates, said the only decision the Sub-Committee could reach was the severance of diplomatic relations with Franco Spain, and Gromyko lamented the unnecessary delay caused by the investigation. Immediately, the Sub-Committee began to receive numerous documents accusing Franco, among them one captured by the Russians during the battle of Berlin, in which Franco promised to attack the Allied Expeditionary Forces in North Africa in exchange for supplies and ammunition to be furnished by Germany.

On May 14, while the investigation was going on, Franco inaugurated the second meeting of his Cortes (Parliament). The Acting President was Esteban Bilbao, ex-Carlist, who denied that the Spanish Government was a dictatorship, because in the Cortes "all the parties were represented," and accused the victorious Allied Nations of meddling in the domestic affairs of other countries. It was the only hint given in the Cortes of the international problem faced by Spain. The speaker stressed the difference between Nazism and Falangism, which was that the Nazis attacked Catholicism and the Jews, while Falangism had never done so.

At the end of May, the Sub-Committee of the UN in charge of the Spanish case released some of the reports received from members of the Organization. Among them it is worth while to mention the Norwegian one which pointed out that Norway maintained no diplomatic relations with Franco and favored energetic action aimed at the restoration of democracy in Spain. The United States State Department presented a report that can be summarized as follows: Franco is in no military

tion, where it was said that Franco's regime was a menace to world peace. On October 24, Trygve Lie, the General Secretary of the UN, read in a report to the Assembly, that as long as Franco remains in Spain, he will be a source of trouble to the founders of the UN. The Belgian delegate, Van Langenhov, also insisted that the Spanish problem be considered by the Assembly. The American and British delegations only hoped that the Assembly would find a solution. The Spanish Embassy voiced their disapproval of Lie's attitude, and the press in Madrid hinted that Lie, as Secretary General, should not have taken a partial position with regard to Spain. On October 26, the delegations of Norway and Chile presented motions, asking for a discussion and solution of the Spanish case. Norway demanded a definite date, and the Chilean delegate insisted that it was not a case of intervention, because dictatorial regimes cannot be dealt with on equal bases with democratic governments. The intermediate position of the British was much commented upon. In the Congress of trade unions at Brighton, nine hundred delegates almost unanimously protested against the vacillating attitude of the Laborites. On the other hand, the Government appeared to be still interested in the situation, and in the House of Commons, two members reported on recent trips to Spain. They said Franco's methods were repulsive, and that the workers and younger generations desired to overthrow him, but added that they both feared and wished to avoid civil war. Late in October the case was once more the subject of deliberation in the Assembly of the UN. Many of the delegates of the small nations demanded that the case be attended to without delay. The Norwegian delegate, Lange, said that something should be done to help the democratic forces in Spain to recover their lost liberties. An agreement was reached to remove the case from the agenda of the Security Council and present it to the General Assembly. This plan was accepted by Dr. Giral in a private conference with the Russian delegate. Molotov, in the October 30 meeting, maintained that the Assembly should take immediate steps to discuss the question, but this was not possible because, according to the regulations, before any new business can be discussed in the Assembly, it must be placed on the agenda in advance. The Cuban and Venezuelan delegations said unofficially that they had special plans with regard to the problem. The Cuban Ambassador indicated that Franco should abandon the government and convoke general elections to be supervised by an international commission composed of Latin American nations.

Belgium, Czechoslovakia, Denmark, Norway, and Mexico proposed that the Spanish problem be discussed by the General Assembly. The Polish delegate entertained two motions, the first one asking for the severance of relations with Franco, and the second soliciting the exclusion of Spain from any organism directly or indirectly connected with the UN. Later the Security Council voted the Spanish case off its agenda in order to open the way to the discussion before the General Assembly. The Russian delegate explained his vote saying this was with the understanding that the Assembly would reach a quick and satisfactory solution. In the following meeting of the UN Assembly, nothing was discussed, but much time was devoted unofficially among the delegates to the problem of Franco. The Cuban delegation continued to insist on the formula of Franco's resignation and a plebiscite under the supervision of a committee of Latin American nations. United States Under Secretary

of State Acheson, interviewed, repeated that the American Government disapproved of Franco, but believed that any international action would cause civil war, and that any change of government should be brought about by the Spanish people themselves. Dr. Giral stated he did not believe in the feasibility of the Cuban plan, and presented to the Secretary of the Assembly a document asking that the UN should take rapid and adequate measures to stop the economic and political help given to Franco by some members of the Organization, which in his opinion constitutes a violation of the agreements made in San Francisco and London. Meanwhile, the Caudillo, on November 12, stated to an Associated Press correspondent that the isolation of Spain would cause divisions among the members of the UN, adding that Spain, come what may, would always be backed by the Catholics of the entire world. At the questions asked him by the correspondent as to whether he was planning to convoke an election, he answered: "The provocations from abroad and the international attacks do not make this an opportune moment to hold an election." He added that he was not interested in joining the UN until the heated controversies caused by the war died out. In the first week of December, United States delegate Tom Connally proposed to the UN Assembly adoption of a resolution urging Franco to surrender his powers "to a provisional government, broadly representative of the Spanish people and committed . . . to the prompt holding of an election."

On December 12, the UN Assembly approved a resolution recommending that all members recall their ambassadors from Madrid. The resolution also provided that if the Franco regime remained in power, the Security Council should consider "adequate measures" to remedy the situation, and that the present Spanish government should be barred from membership in all international agencies connected with the UN.

This resolution was voted 34 to 6. Those opposing the move were: Argentina, Costa Rica, Dominican Republic, Ecuador, El Salvador, and Peru. Abstentions included Afghanistan, Colombia, Canada, Cuba, Honduras, Lebanon, the Netherlands, Arabia, Syria, Turkey, and South Africa.

So the year ended with this long-fought resolution, considered by some delegates toothless and inadequate.

**Monarchist Spain.** Early in the year, there were still rumors about the possible solution of the Spanish case, by offering the throne to Don Juan de Borbón, son of Alfonso XIII. But in January it was disclosed that the Monarchists were divided into two groups, one formed by the exiles who insisted that Juan should make no agreement with Franco nor with the Republic, but should present himself as a champion of a conservative, democratic government; the other group was formed by the militarists who had participated in the Civil War on Franco's side, and insisted on an agreement with the Caudillo. This schism was made worse by Franco's firm attitude, indicating that he would yield to no outside pressure. There was talk of a monarchist coup d'état, organized from Portugal, and Don Juan's residence at Lausanne was the meeting-place of important members of his party. In February, the Pretender and his wife went to England and were greeted by a group of friends with a reception, at which the absence of Franco's ambassador in London was noted. Juan stayed at the Claridge, and began to prepare his trip to Portugal. While he was doing so, the Spanish press published a series of articles against Oliveira Salazar, the Portuguese

dictator, because he had authorized Don Juan to reside in Portugal. The British Government, though not preventing his stay in England, made it clear that his visit should be strictly unofficial. In February, Don Juan went to Portugal and took a house at Estoril Beach, one of the exclusive resorts. From there, he made a semi-official proclamation of forty-three points, in connection with the government that Spain should have. Among the points is one that was summarized by the Monarchists thus: "Soldiers to the barracks, and the priests to the Church." It undoubtedly indicates a marked change in the Bourbon philosophy, which has always depended upon the Church and Army for support. In Spain, 450 members of the Monarchist group published a petition to Don Juan, asking him to come to the country and take possession of the throne, vacant for the last fifteen years. Franco objected to this, immediately ordering the persecution of some of the signers. Some were dismissed from government positions, and a professor in the Franco-controlled University of Madrid was attacked by a group of Falangist students for having signed the petition.

At the end of April, the political machinations of the Monarchists for a quick restoration of the Bourbons seemed doomed to failure. The hope of Don Juan was to be given the throne of Spain as a solution to the struggle between Franco and the Loyalists, with the backing of England and the United States, but when he realized that Franco would not cooperate, he turned again to the ultra-conservative group of his partisans, who began to talk of a possible restoration with army aid. Nevertheless, the opinion of the political observers in Portugal was that Don Juan had little chance, because neither the Spanish people nor public opinion the world over would accept a government of this type. Early in May it was announced that the Pretender was losing all hope of convincing Franco, and there were rumors that he had decided to give up his aspirations and go to Canada. He planned to settle in Quebec, where there is still a French nucleus of the population that admires the House of Bourbon, and spend the rest of his life as a gentleman farmer, like many of his relatives, whose ancestors once ruled Europe.

After this date, the political importance of the Monarchist party rapidly declined, once they became convinced that Franco would not give the government over to them voluntarily, and that if he were forced to resign, it would most probably be to make way for a democratic government.

**Republican Spain.** At the beginning of the year, the most important members of the Spanish Republican Government were in New York, among them, President Martínez Barrios, and Premier José Giral, both stating that they were planning to go to Europe, but not disclosing their destination. Giral told the press that the Republican Government of Spain was first going to use all peaceful methods in order to liberate Spain from the yoke of Franco. A few days after this statement, it was revealed that the Spanish Republican Government would make its headquarters in France, because the French Government had so authorized it. Early in February, Dr. Giral arrived in Paris, and it was rumored that Dr. Negrín was also expected for the reorganization of the Republican Government to the satisfaction of the Rightist and Leftist members. The Spanish Premier took a small room in the student hall of the Rockefeller Institution, and did his best not to attract attention. The international climate for the Republicans changed for the better when United States Secretary of State Byrnes emphat-

ically denied in the Parisian press that the Washington Government favored the return of the Monarchy.

At the end of February, the underground Loyalist movement in Spain organized a demonstration in Madrid, despite Franco police, and some of their members cast leaflets from one of the balconies of the Gran Vía Hotel, in favor of the Republic and announcing a quick liberation of Spain. On March 12, President Diego Martínez Barrios arrived in Paris and was warmly received by the Spanish refugees, the French Government, and a throng of sympathizers with the Republican cause who followed his car to the Champs Elysées, singing *La Marseillaise* and the Republican *Himno de Riego*. Martínez Barrios contrasted his arrival in France with the one in 1939, during Daladier's administration, when he was under police surveillance, and he stated that this trip to France was the last step toward his final trip to free Spain.

In the same month, Giral's government began the process of reorganization. The political crisis of the newly-formed Republican Government looked serious, because the Socialists, who followed Dr. Negrín, the members of the Republican Left, directed by Ruiz Funes, and the Socialists of Indalecio Prieto, wanted a more thorough reorganization of the government. The situation was made worse by the resignation of Don Fernando de los Ríos, Minister of Foreign Relations, whose portfolio was assumed by Giral himself. On March 25 the Polish Ambassador in Paris presented Martínez Barrios with a document stating that the Warsaw Government was willing to cooperate in order that all the members of the UN should break diplomatic relations with Franco. This document and statement was a tacit recognition of the Republican Government.

In April Giral's Government was reorganized, bringing into it small groups of the Right and Left. The Republican Right was represented by Ossorio y Gallardo and by another member whose name was kept secret because he was residing in Spain. In spite of Franco's restrictions, he was expected in Paris, traveling in disguise. Leiva, the Minister of Agriculture, did the same thing. Fulfilling a prescription of the Spanish Constitution, Giral appointed the permanent State Junta, composed of all the ex-Presidents of the Council of Ministers (with the exception of Azaña, Samper and Largo Caballero, who had died.) The Junta was therefore composed of Alcalá Zamora, Llerroux, Negrín, Cásares Quiroga, Portela Valladares, and Chapaprieta. The President of the Basque Government, Señor Aguirre, also will be a member of the Junta, as well as the head of the Generalidad Catalana, Señor Irla.

On May 6, Dr. Giral arrived in London and received as warm a welcome as the one given by France to Martínez Barrios. The day of his arrival, he conferred with the leaders of the Republican movement residing in London, and said that his only desire was that the UN should sever relations with Franco, because on that same day the underground group would overthrow the Caudillo. On May 7 the House of Commons had a secret session with Dr. Giral. The Spanish Premier did not disclose what had taken place at the meeting, but it was rumored that he reported on the documents he was planning to present to the UN in connection with the totalitarian methods of the Spanish government. He mentioned only that the Franco administration utilizes 68 percent of its budget for the army and police forces.

In the same month, Rafael Sánchez Guerra,

member of the Republican Right appointed to Giral's cabinet, who had been expected since April (see above) succeeded in evading the Franco police and arrived safely in France. It was now safe to announce his name. Later in the month, the Republicans lost Angel Ossorio y Gallardo, Minister without Portfolio and Member of the Right, who died in Buenos Aires at the age of seventy-two.

On May 22, Giral appeared again before a Subcommittee of the British Parliament investigating the Spanish case. The purpose was to testify on the discrepancies between his report and the data in possession of the British Foreign Office. Giral explained that Franco has 840,000 soldiers, and that if the Foreign Office claims only 600,000, it has not taken into consideration the Moorish troops and the forces of the Foreign Legion, not counting over 100,000 civil guards and the armed members of the Falange.

In June, Giral's Government took another step toward the unification of the Republican forces, when he secured the backing of the Spanish Socialist Labor Party, that appointed Enrique de Francisco as Minister without Portfolio in the Republican Cabinet. During August, Hungary officially recognized Giral. By this recognition, there were ten nations with official diplomatic relations with Republican Spain, as follows: Russia, Poland, Yugoslavia, Bulgaria, Rumania, Mexico, Panama, Guatemala, and Venezuela. The Hungarian recognition has been especially painful to Franco, because the government of Budapest is composed mainly of small landowners, most of them Catholics and Rightists.

Early in September, two more members of Giral's cabinet, Minister of Finance Augusto Barcia Trelles and Minister without Portfolio Alfonso Rodríguez Castelao, arrived in Paris. The only important member of the government still outside France is the Minister of Justice, Don Alvaro Albornoz, who is still in Mexico. In October, two Loyalist prisoners, members of the Republican Government, Ramon Vivero and Julio Nieto, were garrotted in Spain. On October 25, Dr. Giral visited the Flushing Meadows building where the UN delegates were gathered. He expressed his satisfaction over Trygve Lie's speech of the previous day and said he had conferred with various delegates and would present important documents to the Assembly in connection with the recent executions in Spain.

During the long debates, first before the Subcommittee and later before the Assembly, Dr. Giral maintained that the strongest measure against Franco would be to stop all trade, so producers would be forced to sell their foodstuffs to the needy Spanish people, and at the same time Franco would be deprived of the economic help, without which he could not struggle along.

**Defense.** According to official reports, Spain has an active army of about 200,000 men and a trained reserve of about 1,300,000. The air force is said to be composed of 5,000 men and the same number of reserves. The above figures do not include the Foreign Legion, and there have been discrepancies with regard to the actual strength of the army. The British Government and the United States State Department have disagreed with the figures produced by the head of the Republican Government in exile, Dr. Giral. (See above, *Events*) The army equipment is inadequate and obsolete, although the Spanish government manufactures some light armaments and ammunitions. According to the law, there is a two years' compulsory military service. The army is formed of eight corps on the Peninsula, and two in Morocco, besides two units

(Comandancias) in the Balearic and Canary Islands, and one independent cavalry division. The Navy has two old cruisers (Navarra and Méndez Núñez) of about 4,500 tons each; three relatively modern cruisers (Galicia, Cervera, and Cervantes) of 7,475 tons each, and the battle cruiser Canarias, of 10,000 tons. Besides these, it has twenty destroyers, four sloops and a number of lesser vessels.

**Production.** Agriculture is the principal economic activity in Spain. Out of the total area of the country, 14.31 percent is devoted to cereals, 2.61 percent to vegetables, 2.99 percent to vineyards, 9.51 percent to olives, 1.26 percent to root crops, 1.41 percent to industrial crops, 1.03 percent to fruits, 0.72 percent to artificial meadows and 48.68 percent to pasture. Mining runs next to agriculture. The production in order of value are coal, wolfram, potash, iron ore, lignite, anthracite, rock salt, zinc, iron pyrites, mercury, lead, and copper. Manufacture of light industrial goods is important principally in Catalonia, and fisheries have been considerably developed. Chief among the forest products are cork, turpentine, and rosin.

**Trade and Finance.** According to the latest available statistics published in the newspaper *Arriba*, organ of the governmental party, the total imports of Spain in 1945 exceeded the exports by 105,000,000 gold pesetas. According to these figures, Spain imported 2,229,589 tons of merchandise in 1945 against 2,120,788 in 1944; and exported 2,635,893 tons in 1945 against 2,518,089 tons in 1944. The report does not mention the value in gold pesetas of these imports and exports, but indicates that there was a "considerable increase in imports" and a slight decrease in exports. The official statistics for 1944 claim that the exports exceeded the imports by 17,700,000 gold pesetas.

**Transportation.** The railway system of Spain includes 12,855 kilometers of broad-gauge, while the narrow-gauge railways include about 75 small private company lines with an aggregate length of approximately 3,500 kilometers. Despite the continued shortage of equipment, the railroad carried a notable amount of traffic during the last quarter of 1945 and the first half of 1946. The Spanish Merchant Marine has a registered tonnage of over 1,000,000 tons.

**Spanish Possessions.** The area and population are shown in the table below. The Canary Islands are two provinces of Spain (Las Palmas and Santa Cruz de Tenerife) having a total of 7,496 square miles, and a population in 1940 of 680,294.

SPANISH POSSESSIONS		
	Sq. Mi.	Pop.
Morocco, including Alhucemas, Ceuta, Chafarinas, Melilla, Penon Velez, Ifni, and the Protectorates of the northern and southern zones	18,454	1,284,000
Sahara, territories of Rio de Oro, Sckia, Hanera	105,409	37,000
Guinea, including the island of Fernando Poo, Corisco, Annobon, and the two Elobeyes	10,852	167,500
Total . . . . .	134,715	1,488,500

(For more details on Colonial Possessions, see SPANISH AFRICA).

**Education and Religion.** According to the census of 1943, 42.35 percent of the adult population is illiterate. Primary education is free and compulsory, although, in fact, the law is not enforced. The educational system is controlled by the Government, under an agency named "Sindicatos de Estudios Universitarios," to which all scholars must belong. The Government claims that about 44,572 elementary schools function, with a total of nearly

three million pupils in attendance. There are 117 high schools, or "institutos" for secondary education, and twelve universities, besides fifty-eight normal schools for the training of elementary school teachers.

Catholicism is the religion of Spain, as at the end of the civil war, the Roman Catholic Church was reestablished as the state religion. The religious orders recovered their legal status, lost during the Republican era, including control and jurisdiction over cemeteries, teaching rights, and other privileges.

MICHEL JORRÍN.

**SPANISH AFRICA.** The territorial possessions of Spain in Africa have in toto an area of 134,716 square miles and a population in excess of a million and a half. These territories are divided as follows:

**Morocco.** Along the northern shore of Morocco are five places of Spanish sovereignty, or "presidios," including Ceuta (the southern counterpart of Gibraltar) and Melilla. They have an area of 82 square miles and 145,000 inhabitants. Along the western coast of Morocco, south of Casablanca, lies the enclave of Ifni (741 square miles and 35,000 inhabitants) also under direct Spanish sovereignty. However, the most important of Spain's possessions is her Protectorate of the Northern Zone of Morocco, of which the area is 7,592 square miles and the population approximately one million. There is also a Protectorate of the Southern Zone which is larger but much less populous (area 10,039 square miles, population 12,000).

The Sultan of Morocco is nominally the sovereign within the two Spanish Zones, where he is represented by a Khalifa. In reality the administration is carried on by the Spanish High Commissioner, who is responsible to the Madrid Government and who resides at Tetuan. With the exception of some 50,000 Europeans and 13,000 Jews, the population of the Spanish Zones is Moslem and largely Arabic-speaking. The inhabitants of the Rif Mountains in the Northern Zone are very warlike and formerly gave the Spanish much trouble. General Franco used many of them during the Spanish Civil War (1936-39) as shock troops. Few educational opportunities are available for the native population.

The natives depend upon a rudimentary agriculture, grazing, and other primitive occupations. Important quantities of iron ore are mined in the Northern Zone. The Southern Zone and the Ifni territory lie virtually outside of the world economy.

**Spanish Sahara.** This almost wholly desert region has an area of 105,409 square miles and less than 50,000 inhabitants. Administratively this colony is under the jurisdiction of the High Commissioner of Morocco.

**Spanish Guinea.** This colony consists of several parts, both island and mainland, with an area of 10,040 square miles and a population of 138,797 (of which only about 1,000 are Europeans). Included in this administrative unit, which is administered by a Governor who resides at Santa Isabel, are the islands of Fernando Po, Annobon, Corisco and the two Elobays. The continental part of the colony is by far the largest in area but is relatively undeveloped. Cocoa, coffee and lumber are the colony's principal exports.

Not included in Spanish Africa are the Canary Islands, which administratively are a part of the metropolitan country.

**Events.** The Franco regime in Spain continued its policy of discreetly encouraging a moderate form of Moroccan nationalism among the Moors in the Spanish Zone. For example, Moorish dele-

gates from Spanish Morocco went to Cairo, with the permission of the Madrid authorities, in order to take part in the non-political activities of the Arab League. This policy had two advantages: (1) it allowed *el Caudillo* to pose as the friend and natural protector of his Moslem subjects, whose continued military support was as necessary in upholding his dictatorship as it had been in winning the Civil War; and (2) it annoyed the French since Moroccan nationalism was not a movement confined to the Spanish Zone. Indeed, its primary object was to "free" the Sultan at Rabat from French tutelage. The nationalist movement in the Spanish Zone was apparently closely tied with that in the International Zone of Tangier. Their leaders were in close communication, and in September they planned simultaneous demonstrations in Tangier and Tetuan. Some observers expressed the belief that this movement was becoming anti-Spanish as well as anti-French. In a statement made on November 17, Abdul Rahman Azzam Pasha, Secretary-General of the Arab League in Cairo, lumped Spain with France as powers with which the Arab states "cannot cooperate . . . as long as they occupy Arab nations in North Africa." There was also considerable anxiety that Soviet agents and propaganda might complicate the situation by espousing the Moorish cause.

ROBERT GALE WOOLBERT.

**SPANISH LITERATURE.** Although communication with Spain has improved somewhat during the past year, and news from the Peninsula comes in rather more freely, many gaps and uncertainties remain in all information about Spain, whether it be political or literary. Some index of literary conditions in that country is to be found in a statement made in a dispatch to the *New York Times* in September, 1946: "at least sixty-five underground papers come out more or less regularly. The most active centers of these are Catalonia and the Basque provinces . . ." Not that the underground press is to be considered a source of literature, but the necessity for the existence of an underground indicates the handicap under which both writers and publishers must function. The newspaper *ABC* of Seville has published a long list of books, mainly textbooks in science and history, which were burned in Spain during 1946. The position of the present regime in regard to literature was stated clearly in June, 1946, by the Minister of National Education, who spoke at the opening of the Book Fair on "La política del libro." After reciting the achievements of the Franco Regime in encouraging literature, restoring libraries and private collections, and setting up such literary and cultural agencies as the *Junta Central de Archivos, Bibliotecas y Museos de España* and the *Junta de Intercambio y Adquisición de Libros*, the Minister summed up the duty of the State toward literature: "to encourage the literary and scientific professions to create an atmosphere of purity and moral decorum . . . the Spanish State leaves theological and ecclesiastical questions entirely to the Church, to which all writers voluntarily submit . . . what can not be done in Spain is to defame the Fatherland, prostitute the family, corrupt youth, subvert the social order, arouse base passions, and trade in criminal fashion upon the mentality of the popular (sic) classes. Let us," he exhorted, "export books of Catholic theology and Christian morality!"

The Spanish Book Fair was held not in Madrid, as formerly, but in Barcelona, in June, 1946. The Catalogue of books exhibited there lists a total of 5,406 titles, classified according to subject and

indexed. This is not, however, by any means a list of new books, or of books published within the current year, but simply a list of those exhibited by publishers, as representative of their output. Some idea of the distribution may be gained from the following: of the slightly over five thousand titles, 519 are in medicine; 388 are in the related fields of devotions, theology, and religion; 613 in history and biography; and 889 in fiction, with only 64 titles listed under poetry, and none under drama. While it would be dangerous to interpret these figures too strictly, they would seem at least to indicate trends of popular interest. The proceeds from the sale of books at the Fair amounted to 1,750,000 pesetas. Before the Civil War the figure was regularly more than six million pesetas, even though books were then lower in price.

In the *Bibliografía Hispánica* for January 1946 there is an important summarizing article, "Statistics on the Production of Books in Spain in 1945." According to this, 4,263 titles were published in 1945. The list is broken down by subjects, as well as by towns and provinces. Barcelona, as is to be expected, had the longest list after Madrid. Of the total given above, 1,328, or more than a fourth, were translated works, 662 of which were from England or the United States. These figures bear out the impression of the previous year (See *YEAR BOOK* for 1945) that Spain has been publishing an unusually high number of translations and still is. This is due probably, in part, to the continuing exile of some of the most productive and creative of Spain's writers, as well as to the rigors of censorship.

The Portuguese Book Fair was held in Lisbon in May, 1946, and many Spanish publishers exhibited there. The *Fiesta del Libro* was celebrated throughout Spain on April 23, 1946, the anniversary of the death of Cervantes.

Although the combination of censorship and the exile of writers has been discouraging to the production of new books, perhaps it has operated usefully in focussing the attention of Spanish publishers and readers more and more on the glories of their own great literature of the past. Even a rapid survey of publishers' lists for 1946 reveals the number, variety, and high quality of the editions of the classics which are available now, or in preparation. It is doubtless this which Professor Allison Peers of the University of Liverpool must have in mind when he spoke, in the *Bulletin of Spanish Studies*, of the "general excellence of contemporary Spanish publishing." Noteworthy among editions of the classics is the series of omnibus volumes inaugurated some years ago by the publishing house of Aguilar, which offers in one volume the complete works of an author. These are from authoritative texts, with clear type and compact and elegant format. Among recent titles in this series are: *Obras completas de Angel Ganiotet*, with a foreword by Melchor Fernández Almagro; *Artículos completos de Mariano José de Larra*; *Recopilación, prólogo y notas de Melchor de Almagro*; *Obras completas de Baltasar Gracián*; *Introducción, recopilación y notas de E. Correa Calderón*; *Obras poéticas completas de Rubén Darío*; *Introducción y ensayo bibliográfico del poeta Federico Carlos Sainz de Robles*; and *La novela picaresca española*; *Estudio, selección, prólogo y notas por Angel Valbuena Prat* (about 1,958 pages). Espasa-Calpe has reprinted some of the *Clásicos Castellanos* which had gone out of print since it ceased publication in 1935, and has brought out a dozen new titles during the past five years. Among these were: Cristóbal Lozano's *Historias y leyendas*. Edición y pró-

logo de Joaquín de Entrambasaguas (these stories and legends served as source material for many romantic writers, among them Zorrilla); Esteban de Arteaga's *La Belleza ideal. Prólogo, texto y notas del P. Miguel Batallori, S.J.*; and Francisco de la Torre's *Poesías*. Edición de Alonso Zamora Vicente. Also from the house of Espasa-Calpe is the series *Colección de Crónicas Españolas*, directed by Juan de Mata Carriazo, of which six have been published. Among these are: *El Victorial*, of Gutierre Díez de Games; *Crónica de Don Alvaro de Luna*; *Crónica de los Reyes Católicos*, of Hernando del Pulgar.

Among other learned works, the following volumes of the *Biblioteca de Autores Españoles* have been republished: xvi (*Romancero general*); xvii (*Poemas épicos*); and xviii. *Novelistas posteriores a Cervantes*. The Spanish Academy has resumed publication of the *Biblioteca Selecta de Clásicos Españoles* with an edition of *Diálogos de la conquista del reino de Dios*, by Fray Juan de los Angeles, with an introduction and notes by Angel González Palencia. A second edition, revised and enlarged, of Valbuena Prat's *Historia de la literatura española* was brought out in 1946. A second edition of Antonio Palau's monumental bibliographical work, the *Manual del librero hispano-americano*, Vol. i A-B, with 40,000 references in 600 pages, is promised for 1947. An appendix with indexes is to be published separately. The *Asociación de Libreros y Amigos del Libro* published in October, 1946, a facsimile of *Discursos sobre el arte del danzudo y sus excelencias y primer origen* by Juan de Esquivel Navarro (Sevilla, 1624). This facsimile was distributed only to members.

A new and important series, inaugurated in 1945, is the *Biblioteca de autores cristianos* (Madrid, Editorial Católica). Already published in this series are a new edition of the Vulgate, the Works of St. Augustine in both Spanish and Latin; and the complete works of Fray Luis de León, revised and annotated by Padre Felix García, in one volume of 1694 pages. The last-named edition contains several important works hitherto not readily accessible, such as the little-read but significant "*Exposición del libro de Job*." Another interesting title in this series is *Suma poética. Amplia colección de la poesía religiosa española*, edited by José María Pemán and Miguel Herrero. "Dozens of authors are represented here who can be known to very few even by name," says Professor Allison Peers in regard to this anthology, "Scores of poems, found in no ordinary anthology, must have been dug out of *cancioneros*, or discovered embedded in ascetic treatises."

**Fiction.** Enough has been said to indicate that the literary world of Spain in 1946 maintained a lively interest in preserving the great works of her splendid tradition, and in making these books accessible to modern readers. The magnificence of some of these classic authors would tend to dwarf those of the present even if there were giants among present-day writers. Putting aside this perhaps unfair comparison, it still is not easy to find encouraging signs in the actual literary output of modern Spanish writers. Translations and reprints outnumber original new works. For example, of the 889 novels listed in the catalog of the National Book Fair in Barcelona, June, 1946, 254 are translations from foreign languages. The choice of writers extends to a very curious hodge-podge, including, from the English-speaking world, from which the largest number of translations appears, such widely varied authors as Florence Barclay, Somerset Maugham, Rudyard Kipling, Agatha Christie, Mark Twain,

Charles Dickens, the Brontës, Galsworthy, Scott, and Chaucer. Among these are twelve titles by Edgar Wallace. Translations of Tolstoi, Turgeniev, Pushkin and Dostoevsky are listed. Among the surviving members of the generation of 1898, Azorín is represented by *La Isla sin aurora* (Barcelona, Ediciones Destino, 1944), which is described as the symbolic narrative of a poet, a dramatist, and a novelist in search of their dream island, which "reveals el poeta de las pequeñas cosas at his delightful best." Azorín has been awarded the *Gran Cruz de la Orden de Alfonso X, el Sabio*. In Pío Baroja's *El Caballero de Eridán* (Madrid, Ediciones "La Nave," 1943), the setting is the Basque provinces in the 18th century, and the novel, episodic and repetitive, is valuable chiefly as the evocation of an age and a region. Published in 1946 was Francisco de Vélaz's *Mis conversaciones con Don Pío Baroja, por D. Benadulla*. Benadulla is a *panadero*, imagined by Vélaz as a friend of Baroja's in his early days; the material for the book is drawn from Baroja's memoirs, of which three volumes have been published, and the result is described as a delightful work, graceful and satirical. Ramon Gómez de la Serna, now living in Buenos Aires, has published there a new edition of an earlier work, *Seis falsas novelas* (Losada, 1945). The *Premio Africa* was awarded to Luis Antonio de Vega for his *Los hijos del novio*; of him the *Bibliografía Hispánica* says: "he is one of the novelists who has taken most seriously our African problems." Of the younger novelists, Ignacio Agustí seems to be considered the most important. Of his *Mariano Rebull* (Barcelona, Ediciones Destino, 1944) Azorín writes: "at last, we have a novelist . . . it breaks a long barren spell of over ten years." His *El viudo Rius* (Barcelona, Destino, 1945) is a powerful story of labor troubles in Barcelona; it has aroused considerable controversy in Spain.

**Essays.** The *Bibliografía Hispánica* devotes a long review to *España (Panorama de la vida espiritual)*, by Victoriano García Martí; "this essayist," the reviewer says, "discusses, in an entirely subjective way, the Sebastianism and the Quixotism of our country." Eugenio d'Ors published in 1946 his *Teoría de los estilos y espejo de la arquitectura*, an important collection of essays on aesthetics, part of which was the author's paper read at his reception into the Academy. Some of these essays are autobiographical. The Casa Aguilar, in Madrid, published in August 1946 a *Novísimo Glosario* of Eugenio d'Ors, which the publishers describe as an "Antología d'orsiana," with an index and notes.

**Poetry.** In addition to the important anthology previously mentioned in the series *Biblioteca de autores cristianos*, another noteworthy anthology is the *Canções populares de la Edad de Oro*, edited with an introduction by Santiago Magariños (Barcelona, Lauro, 1944), which offers a substantial collection of Spanish songs of the 15th, 16th, and 17th centuries. Several new volumes have been published in the Adonais series, which includes contemporary Spanish poets and translations of foreign poetry; translations of Byron's poems, by María Alfonso, and of Whitman, by Concha Zardoya, have appeared recently in this series. Espasa-Calpe published in June, 1946, the *Poestas completas* of Antonio Machado. *Kasida del olvido*, by Joaquín Romero Murube, curator of the gardens of the Alcazar in Seville, "has captured something of the spirit of the Andalusian Moorish kasidas in Castilian romances." A translation of T. S. Eliot's poems by Dámaso Alonso, the scholar and poet, has been brought out in Madrid. Dámaso Alonso's *Hi-*

*jos de la tra*, Madrid, 1944, is considered by Aubrey Lumsden as the poet's "most significant poetic contribution to date." Also published in 1944 was his *Versos plurimembres y poemas correlativos*. Góngora, whose kinship with modern poetry is clear, seems to be enjoying a continued revival; a selection of his poems, "*Las mejores poesías de Góngora*," edited with an introduction by M. R. Blanco-Belmonte, was published in Madrid during the year.

**Plays.** An examination of the works listed under the heading Theater and Cinema reveals much the same situation as that already noted in Fiction: a large number, relatively, of translations, new editions of Spanish classics, and very few new plays. The translated works include a "very free adaptation" of the *Antigone* of Sophocles, Schiller's *William Tell*, and three plays of Oscar Wilde. Among new editions of the classics are Gil Vicente's *Auto da Barca do Inferno*, edited by Charles David Ley; selections from the Plays and Poetry of Gil Vicente, with an Introduction and notes by Concha de Salamanca (Aguilar); the *Comedias Religiosas* of Calderón (Espasa-Calpe), and a one volume edition of the *Pasos* of Lope de Rueda and the *Entremeses* of Cervantes (Editorial Ebro).

**Anniversaries.** Two biographies of Goya appeared ahead of time in honor of the bicentenary year of his birth: *Goya*, by Ramón Gómez de la Serna (Madrid, La Nave, 1945); and *Vida de Don Francisco Goya y Lucientes*, by Fernández Castán Palomar (Barcelona, Juventud, 1944). The three hundredth anniversary of the death of Quevedo was commemorated by a series of lectures in the Academy of Jurisprudence delivered by the Duke of Maura on "Quevedo, hombre político." The Spanish Academy held a ceremony on the same anniversary, at which Don Agustín G. de Amezúa read a discourse entitled "Las Almas de Quevedo," and the sixty-seven year old poet Eduardo Marquina recited a poem dedicated to Quevedo. On April 23, the anniversary of the death of Cervantes, the city of Alcalá de Henares celebrated a requiem mass for his soul in the *Santa Iglesia Magistral*, the expenses of which were borne by the municipal government. Also in honor of Cervantes, the National Library arranged an *Exposición cervantina* which occupied four rooms, and must certainly have been a delight to the Cervantophiles who were fortunate enough to see it. Graphs showed the story of the 1,450 editions of the *Quijote*, and a large map traced the world-wide wanderings of the Knight of La Mancha. The walls were hung with tapestries of scenes from the novel, and one room was a reproduction of Don Quixote's library, with a copy of the *Amadís* open on the table.

**Academy Awards and Other Prizes.** On January 10th, 1946, Luis Martínez Kleister, the poet and novelist, was admitted to the Academy in the place of Díez-Canedo. On January 20th the Marquis of Luca de Tena, playwright and son of the first director of ABC, was received into the Academy in the place of Joaquín Álvarez Quintero. The Bulletin of the Academy says of him "he merits a pre-eminent place in the modern Spanish theater," but none of his published works is listed for this year. On February 10 Narciso Alonso Cortés, the well-known teacher and scholar of Valladolid, was received in the place of Ricardo León (died in 1943).

The *Premio Fastenrath* (for poetry, drama, fiction) for 1945 was awarded to Juan Antonio Cabezas for his play *Rubén Darío*.

The *Premio Manuel Llorente* for 1945 was awarded to Don Lope Mateo for his poetry *Desde tus claras almenas*.

Jacinto Benavente, now living in Argentina, has been elected a corresponding member of the Argentine Academy of Letters. He plans to publish his memoirs in Buenos Aires.

AGATHA B. and NICHOLSON B. ADAMS.

**SPELMAN FUND OF NEW YORK.** The Spelman Fund was incorporated in 1928 with a principal of \$10,000,000. The Trustees of the Fund have power to use the principal as well as income to carry out its purposes.

During 1946, the Fund continued its program directed at the improvement of methods and techniques in the field of public administration. Support was extended to public and quasi-public agencies engaged in disseminating information regarding advances in administrative practice, in developing new types of organization and operating methods, and in actually installing administrative improvements in governmental agencies.

The Chairman of the Board of Trustees is Charles E. Merriam. The offices of the Fund are located at 783 Fifth Avenue, New York 22, New York.

**SPICES.** The year 1947 looks brighter for the spice trade than any year since before the War. Hard hit by the lack of imports from both Europe and the Far East, the spice industry in the United States has had to use its utmost ingenuity to find supplies at home and in countries relatively unaffected by shipping blockades and submarine activity. Early in the War the American Spice Trade Association sent a representative of a special committee to Latin America to survey the situation there, and to arrange for the increased growing of certain herbs and spices for export to the United States. Central Europeans who had settled in Latin America had long been growing such spices as thyme, marjoram, oregano, paprika, coriander and poppy seed, as well as anise.

In the fall of 1946 all spices which had been under Government control during the War were decontrolled—among them pepper, cinnamon (cassia), nutmeg, and mace. Other spices were considered to be in good supply, but it was certain that of all the spices pepper would remain acutely short, perhaps for as much as five years, despite decontrols. The decontrol order permitted American spice traders to bid for what pepper was available at the world price. Under OPA regulations there was a ceiling of 15¢ a pound on black pepper and 23¢ a pound on white. When controls were taken off at the end of August, black pepper jumped immediately to 68¢ a pound and white pepper to 65¢ a pound—the first time in history, so far as it is known, that white pepper undersold black pepper. Normally white pepper costs more because it goes through a decorticating process when the shell of the black peppercorn is removed, leaving the white center which becomes the white pepper of commerce.

It was announced early in 1946 that the Department of Agriculture had been empowered to purchase nine million pounds of Indian pepper, and it was finally determined late in 1946 that of this perhaps some four million pounds had actually been obtained. The arrival of 250 tons in October was expected to give some slight relief. However, such pepper would go first to the meat packing industry from the spice grinders and very little of it was expected to reach the consumer in ground, or whole form.

The normal, prewar consumption of pepper in the United States amounted to 14,000 tons per

year, or about half a pound per capita; and the world consumption was approximately 60,000 tons. With the Netherlands Indies still unable to harvest and ship her pepper because of unsettled domestic conditions, it was believed that in 1946 the American consumer instead of having half a pound of pepper per person, would be reduced to about a sneeze of pepper per person.

As a result of domestic spice-growing in the United States during the war, American mustard has become well established and the crop undoubtedly will continue to be an important one in such states as Montana, Washington, and California. Washington State sage-growers, who jumped into the breach during the severe shortage of sage, announced firmly that they would continue to produce the crop which, some experts said, compared very favorably with the finest Dalmatian sage.

As a result of war shortages, some synthetics came on the market. The spice grinders emphatically stated that they had abandoned the use of synthetic spices, principally cinnamon and nutmeg, as soon as the natural product was again available in quantity. Synthetic peppers made on a base of cereal, ground nut shells, plus various flavorings such as oil of capsicum, is beginning to disappear with the arrival of more true pepper.

A taste for new spices—new to the American palate—has certainly arisen as a result of the war. Chili and curry powder were very widely used by the Army during the war and by homemakers, who found these spices admirable stretchers for short proteins. Their use has spread all over the country and they ceased to be just regional favorites. Oregano, Mexican sage, which had been very widely used by itself and in poultry seasonings during the shortage of Dalmatian sage, had become well established with the consumer as an herb by itself. Anise from Mexico, Chile, Portugal, and elsewhere became popular generally for the first time here as a flavoring for sweets—especially fruit desserts. It had been very widely recommended during the cinnamon shortage. And allspice, which tastes like a combination of cinnamon, cloves, and nutmeg, and which comes only from Jamaica in the British West Indies, is firmly established with the American housewife. Previously it was far better known among English cooks, than among those in the United States.

A survey taken of the spice consumption here, during the war, showed that despite the shortage of many spices, retail spice sales were at sixty million dollars annually, and that consumers were using 18 1 percent more spices than before the war. The survey indicated a national rise in the regular use of chili powder, poultry seasoning, red pepper, celery salt, cayenne, curry powder, celery seed, onion salt, garlic salt, and mixed whole spices. Despite a shortage of sage at the time the survey was done, this herb was reported in more than a third of the homes queried. Americans were found to be spending about 1¢ a week per person—\$1.46 per year per family for spice supplies. This figure is expected to rise through the availability of more spices, now that world trade has been re-established. There is no doubt about the fact that Americans have become seasoning-conscious as a result of having to "make do" with the available foods. With the rising cost of food, spice consumption is expected to rise among lower income groups, especially, who in using more fish, cheaper cuts of meat, more dairy products and legumes, will depend upon proper seasoning to make these attractive to the family.

AMY VANDERBILT.

**STATE, U.S. Department of.** In 1946 the Department of State engaged in manifold activities directed toward laying the foundations of a firm peace and promoting the evolution of the United Nations as an effective instrumentality of international cooperation.

The Department arranged for and participated in American representation at a number of international conferences tending to fulfill these objectives, including the Paris Peace Conference and the meetings of the Council of Foreign Ministers at Paris and New York. In addition the Department of State coordinated American participation in meetings pertaining to the organization or continued functioning of organs and affiliates of the United Nations, including the General Assembly, the Security Council, the Economic and Social Council, the Atomic Energy Commission, the proposed International Trade Organization, the World Bank and Fund, the Food and Agriculture Organization, and the proposed World Health Organization.

Secretary of State James F. Byrnes, bending every effort to bring about agreement upon the peace settlements as rapidly as possible, was obliged to go abroad on several occasions, during which intervals Under Secretary Dean Acheson was Acting Secretary. Congress created the office of Under Secretary of State for Economic Affairs, and Assistant Secretary William L. Clayton was appointed to that post. Benjamin V. Cohen continued as Counselor of the Department. Willard L. Thorp took over the post of Assistant Secretary for Economic Affairs vacated by Mr. Clayton. Major General John H. Hilldring was appointed Assistant Secretary for Occupied Areas. James Clement Dunn was appointed Ambassador to Italy, leaving vacant the post of Assistant Secretary for European, Far Eastern, Near Eastern and African Affairs. Donald S. Russell, William Benton, and Spruille Braden continued as Assistant Secretaries of State. Charles Fahy was appointed Legal Adviser to take the place left vacant by the naming of Green H. Hackworth to the International Court of Justice. Special Assistant Leo Pasvolosky resigned, effective March 15, 1946. William L. Langer was appointed Special Assistant in Charge of Research and Intelligence, later he resigned and was replaced by Colonel William A. Eddy.

The first major reorganization in the Foreign Service of the United States since 1924 was authorized by the Foreign Service Act of 1946, which established a new promotion and retirement system, provided for additional training and re-Americanization of Foreign Service officers, and codified previous legislation. During the year the first American Minister to Yemen was appointed and the diplomatic missions at New Delhi and Washington and at Cairo and Washington were raised to the rank of embassies.

The Office of Inter-American Affairs was terminated by Executive order, and the liquidation of activities in connection with the terminated office was put under the general supervision and control of the Secretary of State. Several of the offices of the Department were reorganized during the year in the interest of greater efficiency.

The organization of the Department as of December 1, 1946, consisted of the following offices, divisions, et cetera:

1. The Secretary of State, the Under Secretary of State, the Under Secretary of State for Economic Affairs, the Counselor of the Department, six Assistant Secretaries of State, the Legal Adviser, five Special Assistants to the Secretary, three Assistants

to the Secretary, and the Secretary's Staff Committee with its Central Secretariat.

2. The Assistant Secretary for European, Far Eastern, Near Eastern and African Affairs administers three offices, namely, the Offices of European Affairs, Far Eastern Affairs, and Near Eastern and African Affairs, consisting respectively of the Divisions of British Commonwealth Affairs, Central European Affairs, Northern European Affairs, Eastern European Affairs, Southern European Affairs, Western European Affairs, and Research for Europe; the Divisions of Chinese Affairs, Japanese Affairs, Southeast Asian Affairs, Philippine Affairs, and Research for Far East; and the Divisions of Near Eastern Affairs, Middle Eastern and Indian Affairs, African Affairs, and Research for Near East and Africa.

3. The Assistant Secretary for American Republic Affairs administers the Office of American Republic Affairs, consisting of the Divisions of Mexican Affairs, Caribbean Affairs, Central America and Panama Affairs, Brazilian Affairs, North and West Coast Affairs, River Plate Affairs, Research for American Republics, and Special Inter-American Affairs.

4. The Assistant Secretary for Economic Affairs administers five offices, namely, the Offices of International Trade Policy, Financial and Development Policy, Economic Security Policy, Transport and Communications, and Foreign Liquidation, consisting respectively of the Division of Commercial Policy, International Resources Division, Petroleum Division, and Division of International Labor, Social, and Health Affairs; the Divisions of Financial Affairs, Investment and Economic Development, and Lend-Lease and Surplus War Property Affairs; the Divisions of Economic Security Controls, German and Austrian Economic Affairs, and Japanese and Korean Economic Affairs; and the Aviation Division, Shipping Division, and Telecommunications Division.

5. The Assistant Secretary for Public Affairs administers the Office of Public Affairs and the Office of International Information and Cultural Affairs, consisting respectively of the Divisions of Public Studies, Public Liaison, Historical Policy Research, and Publications; and the International Press and Publications Division, International Broadcasting Division, International Motion Pictures Division, Division of International Exchange of Persons, Division of Libraries and Institutes, Area Division I (Europe), Area Division II (Near East and Africa), Area Division III (Far East), Area Division IV (American Republics), and Area Division V (Occupied Areas).

6. The Assistant Secretary for Administration is responsible for four offices, namely, the Offices of Departmental Administration, the Foreign Service, Controls, and Budget and Finance, consisting respectively of the Divisions of Coordination and Review, International Conferences, Protocol, Departmental Personnel, Management Planning, Central Services, Communications and Records, and Cryptography, and the Central Translating Division and Presentation Division; Divisions of Foreign Service Planning, Foreign Service Personnel, Training Services, Foreign Reporting Services, Foreign Service Administration, and Foreign Buildings Operations; the Passport Division, Visa Division, Special Projects Division, Division of Foreign Activity Correlation, Division of Investigations, and Munitions Division; and the Division of Budget, Division of Finance, and UNRRA Division.

7. The Assistant Secretary for Occupied Areas is responsible for the coordination of State Depart-

ment policy with respect to all occupation matters and is the Department's member and chairman of the State-War-Navy Coordinating Committee.

8. The Legal Adviser is responsible for all matters of a legal character concerning the Department. His Office also includes three Assistant Legal Advisers (for Economic Affairs, for Special Legal and Public Affairs, and for Administration and Foreign Service) and a Treaty Branch.

9. The Special Assistant to the Secretary in Charge of Research and Intelligence administers the Office of Intelligence Coordination and Liaison and the Office of Intelligence Collection and Dissemination, consisting respectively of the Intelligence Coordination Division, Division of International and Functional Intelligence, and Division of Map Intelligence and Cartography; and the Acquisition and Distribution Division, Reference Division, and Biographic Information Division.

10. The Special Assistant for International Organization and Security Affairs administers the Office of Special Political Affairs, consisting of the Divisions of International Organization Affairs, International Security Affairs, and Dependent Area Affairs.

**STATE LEGISLATION.** Eleven legislatures met in regular session in 1946, including those of Georgia and Missouri whose 1945 sessions extended into 1946 while the legislatures were engaged in implementing new constitutions, a long and difficult legislative task. In 1946 the legislatures of the following states met in regular session: Kentucky, Louisiana, Massachusetts, Mississippi, New Jersey, New York, Rhode Island, South Carolina, and Virginia. During the year eighteen legislatures met in special session with Arizona, New Jersey, and Ohio holding more than one special session. Ohio had four special sessions and Arizona three. In most instances the special sessions were of limited duration, usually lasting less than a week. There were far fewer special sessions held in 1946 than for the comparable year of 1944 when all but eight states held special sessions. Many of the special sessions held in 1946 were for the purpose of increasing salaries of public employees, particularly school teachers. Veterans' problems were also before many of these extraordinary sessions. These subjects also occupied the time of the legislatures in regular session. Other subjects given special attention in 1946 were: aviation, hospitals, intergovernmental relations, industrial promotion, and social welfare.

A summary of the more important enactments on subjects of general interest follows:

**Aviation.** Almost all of the states enacted legislation affecting some phase of aviation development or regulation. Massachusetts and Wyoming enacted measures requiring that federal grants for the construction of public airports be channeled through established state aviation agencies and that such projects be approved by the state agencies in accordance with state airport plans. Kentucky and Virginia passed measures affecting their state aviation agencies. California, Michigan, New York, South Carolina, and Virginia passed bills dealing with airports and air navigation facilities. Georgia and Kentucky enacted legislation relating to airport zoning.

**Education.** Salary increases for teachers were authorized by almost every legislature meeting in regular session and numerous special sessions were called specifically for that purpose. In fact, with the passage of measures providing for a \$25 million increase in funds for schools, the Louisiana legislative session was dubbed a "School-teacher

session." Under Louisiana law the governor has authority to reduce appropriations, so this amount was trimmed somewhat, but there were many gains made by the teachers.

Kentucky passed a school-teachers' retirement bill, increased the school term from seven to eight months, and appropriated \$45,000 for a bi-partisan survey and reorganization of its educational system. Mississippi also established a special commission to investigate the state's educational system, especially its expenditures for common schools. Mississippi took the rather unusual step of outlawing high-school fraternities. A 30 percent increase was made in Mississippi's educational appropriations with funds allocated for more salaries and additional buildings, including a new vocational college to train Negro teachers. In Virginia the legislature gave first-time approval to a proposed constitutional amendment to permit consolidation of a city and county or counties into a single school division, and adopted legislation providing for the distribution of state school funds on average daily attendance of pupils rather than by "teacher units."

A special commission to study the advisability of creating a state university was authorized in New York. At the same time a temporary state university for veterans was set up at a former naval barracks. A number of experimental technical training schools were established in some of the larger New York cities. Increased aid to New York school districts was also voted and additional state scholarships for veterans were authorized. Special training courses for juvenile delinquents were authorized for certain state institutions.

Teachers' retirement benefits were raised in Rhode Island.

**Elections.** Kentucky joined the rest of the states in providing for absentee voting by enacting legislation implementing a constitutional amendment adopted in 1945. After a hot debate Mississippi failed to approve legislation revising its primary election law. New York retained its State War Ballot Commission for another year and approved a statute granting voting rights to servicemen serving overseas in peace time.

Virginia authorized numerous basic reforms in its electoral code, including first-time authorization for constitutional amendments to abolish the poll tax and substitute annual registration of voters. These proposals must be approved by the 1948 session of the legislature before they can be voted upon finally by the people. However, a state board of elections was created with strong supervisory powers and other improvements were made in the election code.

**Health and Hospitals.** A trend toward more rigid licensing and regulation of professions and trades related to medicine continued in 1946. Dental technicians were required to be registered in South Carolina. Provisions were established in New York for the regulation of opticians and the practice of orthoptics (contact lens). Pharmacy practice acts were strengthened in Kentucky, Massachusetts, and New York and trades, such as cosmetology and barbering, came under stricter regulation in New York. Chiropractic regulatory acts were strengthened in Kentucky, Maryland, and South Carolina. Psychologists, osteopaths, and midwives also came under regulation in a number of states. Mississippi provided funds for a program for the eradication and control of venereal diseases, and New York, Virginia, and Idaho (in special sessions) provided additional care for those suffering from tuberculosis. Special studies of spastics and their problems

and of the causes of infantile paralysis were authorized in New York and Massachusetts respectively. \$325,000 was appropriated to a new Mississippi Board of Medical Education.

There was a flurry of bills introduced regulating dangerous drugs such as the barbiturates, hormones, hypnotics, and the various DDT preparations on the market. Massachusetts, New York, and Virginia were among the states that enacted legislation in this field.

A New Jersey act authorized the establishment of blood banks to collect and store blood and blood plasma, and Massachusetts authorized approved laboratories to examine blood donors or recipients of blood.

Medical education was furthered in California by appropriations of \$7 million for the establishment of a medical school and center at U.C.L.A. and \$4 million for additions to the University of California's medical center at San Francisco. A four-year, class A, medical school was authorized in Mississippi with accompanying appropriations. Both New York and Massachusetts authorized studies of the need for additional graduate schools. Nutritional problems will be surveyed in New York State by a joint legislative committee with broad powers.

California, in special session, appropriated funds for the licensing and inspection of public and private hospitals, and Georgia, Massachusetts, Mississippi, and Virginia adopted a number of bills requiring the inspection and regulation of hospitals, homes for the aged, and nursing homes. In some instances the bills amended existing statutes.

A number of the states, including California, Michigan, Mississippi, New York, South Carolina, and Virginia, followed recommendations in the Legislative Program of the Council of State Governments by authorizing hospital construction surveys and by providing for the acceptance by the state of federal funds, when available, for such hospital inventories and construction costs. Special health commissions or medical-care surveys were authorized in Massachusetts, Mississippi, New York, and Rhode Island.

California, Massachusetts, Michigan, and Virginia recognized the increasing problem resulting from mental diseases and provided additional facilities for the treatment of the feeble-minded and those affected with nervous and mental diseases. Louisiana enacted a mental health act to provide for the study and treatment of such diseases.

Hospital care and medical service plans were authorized or broadened in Kentucky, Mississippi, New York, South Carolina, and West Virginia. In New York medical service plans may provide for dental expense indemnity.

**Highways and Motor Vehicles.** The New York legislature extended for another year its 2-cent emergency gas tax and Virginia and Mississippi adopted legislation taxing at 6 cents a gallon all gasoline purchased by carriers outside the state but used over roads in the state. In addition, the gas tax was raised from 5 cents to 6 cents a gallon in Virginia, private auto tag fees were reduced, and the gross receipts tax on trucks was replaced by increasing license fees for trucks. Bills liberalizing vehicle sizes and weights passed in Kentucky, Massachusetts, Mississippi, and New York. These changes, which were minor in nature, brought the states' statutes into conformity with emergency standards established by Governors' proclamations issued during the War. In many instances, before the War, these size and weight restrictions were barriers to interstate commerce. Almost all of the

states have continued their wartime uniform size and weight standards in order to maintain freedom of commerce. To aid the Mississippi Comptroller in collecting gasoline and motor vehicle privilege taxes of various kinds, legislation was enacted authorizing the establishment of "courtesy stations" patterned after the ports of entry operating in a number of other states. Bills increasing truck registration fees or proposals changing the basis for levying such fees were approved in Kentucky, Missouri, New Jersey, Virginia, and by Georgia. Fees were reduced somewhat by the Mississippi legislature. Kentucky became the thirty-sixth state to enact the Uniform Motor Vehicle Safety Responsibility Act which has been highly recommended by various national safety organizations. Mississippi authorized the expenditure of \$7,500 for rate investigations and litigation of carrier transportation, and South Carolina established a Joint Legislative Committee to investigate accidents and to improve highway safety.

Where necessary, those states in session appropriated the required amounts to match Federal funds available to the states under the Federal Aid Highway Act of 1944. Appropriations for highway construction were in general considerably above previous annual appropriations, due to the resumption of construction and the great need for repair and replacement of state roads.

Efforts to lessen traffic congestion were made by Massachusetts, which authorized construction of parking facilities under Boston Common, and by New Jersey, which permitted the New York Port authority to finance a union bus terminal. Municipalities were also authorized to establish and operate bus terminals. Louisiana and New York enacted legislation establishing 50 miles per hour as the state's speed limit and New York set up a state Division of Safety in carrying out a comprehensive highway safety program recommended by Governor Dewey.

**Labor Legislation.** The New Jersey legislature enacted a comprehensive law governing the industrial relations of public utilities, under which the State Board of Mediation is authorized to settle controversies and the Governor is empowered to seize and operate any utility for the duration of a labor dispute. This law was applied for the first time in December during the course of a utility strike. Laws restricting labor unions and outlawing certain types of picketing were passed by Louisiana and Virginia. As a result of earlier legislation putting it on the ballot voters in Arizona, Nebraska, and South Dakota approved proposals at the November election to ban the closed shop. Massachusetts also voted by direct legislation in November to approve a proposal to require that labor unions make public their financial reports.

Missouri established a new department of labor and industrial relations. The department is to be administered by a commission of three members. Kentucky established a Department of Industrial Relations and Employment Services. Massachusetts created a Fair Employment Practices Commission, but California defeated a similar proposal in the November election. Alabama, California, Georgia, Kentucky, Massachusetts, New York, and Virginia enacted legislation affecting workmen's compensation. Mississippi again rejected a workmen's compensation law. Other states have such legislation.

New York approved a number of bills regulating the recruitment and housing of migratory workers. Rhode Island set up an industrial code commission with authority to establish codes for the prevention of accidents and occupational diseases.

**Public Welfare.** Broad improvement was registered in the California welfare organization through adoption of legislation in a special session by expanding training centers for the blind; by the improvement of child care centers, and by improving inspection of homes for the aged. Idaho also in special sessions established a Charitable Institutions Commission with full control and management of all charitable institutions in the state. Joint Legislative Committees were established by Michigan in special session and by New Jersey in regular session to study and investigate juvenile delinquency problems. A system of Youth Courts was established in Mississippi. An Advisory Commission for the Blind was created by the Kentucky legislature, and enabling legislation was approved authorizing the establishment of joint city and county boards of public welfare in order to reorganize and consolidate existing services throughout the state. Ohio, Nebraska, and Mississippi adopted a number of bills increasing the amount and improving aid to the blind and Mississippi approved legislation providing for the erection of a training center for the blind. An improved program for child welfare services was authorized in Mississippi and a Children's Code Commission was created to study and promote the welfare of children.

An adoption laws study commission and commissions to investigate pardons and parole laws and juvenile delinquency were established by the Massachusetts General Court. Kentucky revised its adoption laws in order better to protect children.

Almost every state in session increased allowances for old-age pension assistance and provided more funds for the blind and needy.

New York enacted a broad program of legislation relating to public welfare including bills permitting the State Department of Social Welfare and local welfare departments to proceed with optional plans for developing integrated welfare services throughout the state. Under this program a single office would be provided in which persons may apply for all types of public aid and the investigation of family needs would be made by one agency. The former antiquated "settlement" system in New York was abolished and a more easily administered residence requirement substituted. State aid to local districts for support of welfare payments and administration was stabilized under the 1946 legislation. Missouri created a new department of health and welfare which combines in a single agency a number of previously independent boards and commissions. Health, mental care, and welfare functions are now grouped in one over-all department with directors appointed by the Governor. A merit system governing employment was also provided.

Kentucky passed enabling legislation to permit a city and county to create a joint board of public welfare which would consolidate various welfare activities in one agency. Massachusetts revised legislation regulating the granting-of-aid to dependent children and relating to soldiers' relief. The establishment of more public welfare agencies in certain districts was authorized in Mississippi and the State Welfare Department was given supervision over all public child welfare services. New Jersey authorized a full dress study of its unemployment sickness compensation fund and enacted legislation consolidating municipal public assistance activities and abolishing the office of Overseer of the Poor. Virginia authorized its state welfare agency to fix standards and regulations for the operation

of homes for the aged and to organize a state-wide system of such homes. Virginia also created a special legislative commission to study its program of public assistance. That Commonwealth also outlawed its antiquated statute permitting the flogging of convicts.

California, Idaho, Kentucky, Massachusetts, Michigan, Mississippi, New Jersey, New York, Rhode Island, South Carolina, Virginia, and Wyoming in special or regular sessions enacted legislation affecting the public assistance programs, including assistance to the aged, the blind, the infirm, and dependent children. Rhode Island strengthened its cash sickness insurance fund which had first been set up in 1945.

**Unemployment Compensation.** The most interesting development in this field was the enactment by California of unemployment-compensation disability benefits as a supplement to its Unemployment Insurance Act. California thus joins Rhode Island in compensating unemployment due to sickness. The fund to pay sickness benefits will be financed by employee contributions at the rate of 1 percent of wages up to \$3,000. The disability system in Rhode Island is not a part of the compensation system. Massachusetts and New Jersey adopted resolutions authorizing studies of plans for the payment of disability benefits.

Kentucky and Missouri reorganized their unemployment compensation system. In Kentucky the Employment Service Commission in the Department of Industrial Relations was established with a full-time director to establish and maintain free public employment offices, to administer the Wagner-Peyser Act, and to perform other duties and powers previously carried on by other agencies. A Department of Labor and Industrial Relations controlled by a three-member Industrial Commission was established in Missouri. The State Employment Service and Unemployment Compensation department were established under a division of employment security in the new department.

Kentucky, Mississippi, and New York joined those states that provided both administratively and financially for the day when the United States Employment Service was returned to state control. (This later turned out to be November 15, 1946.)

Louisiana became the thirty-first state to extend coverage by providing that any employing unit is subject to state tax which is subject to the Federal Unemployment Tax Act. In addition, it became the nineteenth state to provide that if the Federal unemployment tax is extended to include services not now covered, state law automatically includes such services. Massachusetts, Missouri, and Virginia made minor changes in provisions of their laws relating to experience ratings, and Massachusetts and Missouri increased their maximum weekly benefit amounts from \$21 to \$25 and from \$18 to \$20 respectively, while Virginia raised its minimum benefit from \$4 to \$5. Louisiana extended coverage to maritime workers and dropped the \$3,000 wage limitation in computing benefits, while New York repealed the provision limiting the benefit rights of seasonal workers. Numerous minor changes were made in the contribution sections of the Rhode Island, Louisiana, New York, and Virginia laws. Louisiana joined nine other states in subscribing to the Interstate Maritime Reciprocal Arrangement which avoids duplications among the subscribing jurisdictions (states and with the federal government) with reference to the contributions and coverage of maritime workers.

**Taxation.** Uncertain economic conditions seemed

to have contributed to the amount of tax legislation enacted in 1946. The search for additional sources of revenue was not limited to federal and municipal governments, if we are to judge from tax increases and new taxes imposed by the few legislatures meeting in 1946. Massachusetts assessed an additional  $1\frac{1}{2}$  percent corporation net income tax for the years 1947-1950. This amount would be levied in addition to the regular 10 percent tax and the 3 percent surtax. The new tax replaces an emergency tax of  $2\frac{1}{2}$  percent which was temporary in nature. Efforts to eliminate the additional amount failed after a bitter fight by manufacturing interests. Kentucky, Louisiana, and Mississippi tightened provisions in their income tax laws. In Mississippi 1946 legislation permits members of the legislature during sessions, and delegates to professional association meetings and political conventions, to deduct expenses from their income tax. Missouri enacted a 7 percent net income excise tax on banking institutions and turned the administration of the personal income tax law over to a State Director of Revenue rather than county assessors. Almost all of the states in session provided a war service compensation on personal income taxes or continued modest exemptions for those serving in the armed forces. In most states \$1,500 was exempted.

A fifty percent cut in personal income taxes was put through in New York State. Temporary business corporation franchise taxes were also removed and the unincorporated business tax was reduced. In addition, numerous technical improvements were made in the personal income and business franchise tax laws. At the same time New York extended its emergency estate tax.

Arizona, Louisiana, Maine, New York, and South Carolina increased taxes or license fees on beer and liquor. Arizona led the parade with a fifty percent increase in its luxury excise tax on liquor.

Maine enacted a 5 percent tax on luxury items such as jewelry, furs, etc., also on admissions and cigarettes, only to have the proposals defeated by referendum at the Fall elections. Illinois approved a  $\frac{1}{2}$  mill increase in its cigarette tax in order to help pay for the soldiers' bonus authorized in November.

Gasoline tax changes mainly had to do with refunds on taxes paid on gas used by the Federal government, by local governments, or for agricultural purposes.

Virginia authorized any city or town to impose a tax on bank stock. Numerous technical amendments were made in state tax codes covering general license fees, property taxes, the corporation franchise tax, and levies on insurance companies. Massachusetts imposed a 5 percent tax on the profits on fire and marine insurance companies.

During the sessions there were many requests from city governments for authority to increase or impose additional taxes. For instance New York and Rhode Island passed enabling legislation permitting cities to impose a tax on hotel bills. This is a continuation of a trend which has developed in recent years due to the critical financial plight of the large municipalities and the need for new sources of revenue other than the property tax or license fees. The result has been that cities such as Philadelphia, Toledo, and St. Louis now impose income taxes, and many cities collect sales, gross receipts or tobacco taxes. In most instances state enabling legislation was required to pave the way for these new taxes. In some states the fight for additional municipal revenue revolved around efforts to secure the appropriation of the states' postwar

reserves or of a larger proportion of the sales tax for cities. In California, \$90 million of the state's reserves were given to cities, and in Ohio and Michigan (by Constitutional amendment) a larger proportion of sales tax revenues was allocated to cities. In Louisiana, New York, and Rhode Island a redistribution of pari-mutuel tax revenues will result in more revenue for the cities.

New York adopted a comprehensive program of aid to cities based on a special study with the result that the amount of aid received by localities from the state will be stabilized; a new basis for distributing such aid was arrived at, and New York City was given permission to levy numerous additional taxes.

After endless debate on the subject, the Rhode Island legislature established a special commission to study state-local relations and to develop a system of taxation to finance adequately both levels of government.

**Veterans' Legislation.** The problem of the veteran was the major subject before the 1946 legislatures. What to do about the veteran's schooling, housing, taxes, and his job, or lack of a job, were problems of paramount importance at every state capital. (Special reports on State Veterans' Legislation have been issued by the Council of State Governments and by various federal agencies.)

With respect to veterans' education, California appropriated \$750,000 for direct education assistance to veterans during the current school year. Correspondence instruction and apprenticeship training for veterans were also provided. Louisiana authorized state aid for the education of children of deceased veterans. Maine appropriated \$250,000 to provide emergency facilities for veterans at the State University. Massachusetts established a new college for veterans at Fort Devens; authorized cities to provide college courses; and provided free university extension courses for veterans. Michigan set aside \$200,000 as an emergency loan fund for veteran students. New York created five institutions of arts and sciences; and established more state veterans' scholarships. Almost all of the states made emergency supplemental appropriations to enlarge their universities to meet increased enrollments of veteran students.

Veterans' housing problems were so critical that many states made funds available for providing temporary housing at state universities, and others authorized bond issues for the construction of permanent dormitories. California appropriated \$7½ million to aid communities in acquiring emergency housing from the federal government for veterans. Connecticut appropriated \$5,000,000 for the same general purpose and in addition established a revolving fund to provide lumber from state forests to be used for veterans' housing. Massachusetts passed an enabling act to permit local communities to take various emergency housing and most of the other states in session empowered political subdivisions to participate in the Federal emergency housing program for veterans. New Jersey gave its department of economic development sweeping powers to acquire land, buildings and other facilities for emergency housing with an appropriation of \$6 million. Later a \$35 million bond issue was authorized by the voters for this purpose. New York created a board for emergency housing of veterans with broad powers to construct housing facilities and with appropriation of \$35 million from the postwar reconstruction fund to carry out the act. Ohio appropriated \$6 million to its counties, allocated on a population basis, to

provide temporary emergency housing for veterans.

Bonus legislation was considered by a few of the states. For instance Massachusetts supplemented its 1945 bonus measure by providing for payment of an additional \$100 to veterans who had not served outside the United States, and an additional \$200 to those who saw overseas service. Illinois, Michigan, and Rhode Island paved the way for referenda on the subject at the November election with the result that bond issues for the payment of the bonus were adopted in the three states. During 1946, the New York legislature approved for the first time a bonus measure requiring bonds amounting to \$400,000,000. If passed again at the 1947 session this proposal will go to the electorate for approval November, 1947.

California, Kentucky, Louisiana, Minnesota, Massachusetts, Mississippi, New Jersey, New York, Ohio, and Virginia enacted measures further strengthening veterans' employment preference status or granting reemployment rights for veterans returning to state jobs.

With one exception every state meeting in regular session in 1946 passed laws to grant veterans exemptions from taxes and licensing requirements. Included were exemption from penalties and interest in connection with property taxes for individuals while in service; extension of time for paying state income tax; property tax exemption for disabled veterans; exemption from payment of poll taxes; automatic reinstatement of veterans who held licenses granted by state boards, exemption from examination for veterans otherwise qualifying for various state licenses and credit for army experience in qualifying for certain licenses.

Massachusetts legislature adopted a resolution authorizing for a survey of postwar problems relating to economics, housing, and the need for a \$50,000,000 veterans' loan fund. Mississippi enacted a farm and home loan act to assist qualified veterans in buying a home or farm to cost not more than \$5,000 when it can be shown that such veterans have been unable to obtain loans in their own community. Following a suggestion made by the Council of State Governments several states took action to permit veterans under age 21 to obtain certain benefits under the G. I. Bill (thus removing so-called "minority disability").

**Miscellaneous.** In Virginia small loan interest rates and agencies were more stringently regulated and in Kentucky pawnbrokers were licensed and regulated.

A comprehensive anti-pollution law was adopted in Virginia and a 5-member state water control board was established to help administer it. A co-operative program for the development and conservation of forest lands was approved in New York.

Numerous changes were made in the insurance codes of the states in order to comply with Congressional legislation (Public Law 15) requiring elimination of monopolistic practices by insurance companies in the states. New York established a special commission to study effect of the Federal Act on state regulation. New York continued its legislative commission to investigate agriculture with instructions to study spread between farm and consumer milk prices. Virginia appropriated additional funds for an expanded agricultural experimental program.

**Conclusion.** An analysis of state legislation enacted in 1946, the first postwar legislative year, shows that the states are meeting their expanded postwar responsibilities in a determined and constructive manner.

The attention given such subjects as aid to veterans, teachers' salaries, labor, fiscal policies, and state-local relations is an indication of the problems that will trouble the forty-four legislatures meeting in 1947 and for many years to come.

HUBERT R. GALLAGHER.

**STATES OF THE U.S.** Additional information pertaining to each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles: AGRICULTURE, MARRIAGE STATISTICS, MINERALS AND METALS, ROADS AND STREETS, SCHOOLS, SOCIAL SECURITY BOARD, TAXATION, UNIVERSITIES, VITAL STATISTICS, ELECTIONS, REPRESENTATIVES, SENATE, and STATE LEGISLATION. (See the accompanying table on page 632).

**STYLES.** During 1946 the American fashion industry flourished in spite of the scarcity of fabrics, as well as restrictions on styling and prices. When postwar relaxation precipitated a fever of spending and lavish social life the industry met the challenge and produced the most elegant, luxurious fashions seen here since the fabulous twenties.

Paris lived again in America through the Theatre de la Mode, a beautiful exhibit of fashions in miniature brought by the Paris couture to New York, which achievement attested to its courage and spirit. By midsummer the Paris couture had inaugurated its regular openings, but not many Americans crossed for this too-early occasion.

In the meantime American designers had reached new heights in ingenuity and achieved merited recognition all over the world. Regional America was tapped for inspiration; war-born mid-western fashion centers blossomed. In addition to these advances in design great progress was made in fabric research and also in the designing for special age, size, and figure groups, much of this the result of war production.

Lower priced merchandise was forced out, however, by shortages and rising incomes. Of the two government price controls that governed the apparel industry the Maximum Average Price set of regulations, controlling manufacturer's products, was abandoned in July and the Office of Price Administration was weakened drastically during the year, and abandoned entirely in November 1946. Despite high prices and poor quality clothing sales skyrocketed. Jewelry and fur sales were not hampered by the continued twenty percent luxury tax until October, after which furs suffered a substantial decline and customers became wary of buying.

Some materials, scarce during the war, returned: nylon early in the year, pure silk by mid-year, and pure linen as well. Others, especially rayon, worsted, and leather continued short and curtailed production.

The fashions of 1946 were drawn largely from the nineteen twenties' parallel postwar era. In addition, the romantic Proust era after the turn of the century offered inspiration too. Suits, highly styled, feminine, and varied continued as the mainstay of women's wardrobes.

The dressy shortcoat—about thirty-one to thirty-four inches long—worn over the dress or suit, either brief, boxy, and flared usually or belted, was a big favorite for spring; for fall it continued, but without the belt.

Blouses grew in fashion importance and in variety of styles. Younger women favored all fabrics and colors in the blouse worn over the skirt, usually adding a wide, decorative leather belt. The most successful colors, besides black, were neutrals in a

\* Died Dec. 21, 1946. \* Administered by Committee appointed by the President, confirmed by the Senate, and consisting of John Russell Young, Guy Mason, and Col. Charles W. Kuts, C. E.

wide range of greige, gray, and fall beige shades. Browns, especially cocoa brown, took on new importance. The bold bright colors of wartime years, such as bright red, bold royal blue, and bright green declined somewhat, although red and green especially, were still worn. During the late fall there was a demand for grayed pastel colors inspired by the French exhibit of Aubusson tapestries, but the poor condition of the rayon market short-circuited the demand.

In prints, bold, abstract, and conversational motifs and beautifully grouped flowers led in design. Print colors showed pastel backgrounds with black or navy designs; or black and navy backgrounds with colorful designs. Pastel pink, turquoise blue with black designs and black or navy with roses or poppies were favorite combinations.

Woolens were plentiful although worsteds of all kinds were still scarce; and wool jersey made a new fashion place for itself.

There was an increased demand for matched or ensembled sportswear wardrobes; gabardine for fall, checks for spring, and denim for summer, they served in all seasons. Clothes for travel by air, land, and sea, especially travel coats, returned to fashion. Functional active sports clothes came back and promise greater popularity for 1947.

In the spring relief from some government restrictions limiting yardage brought a freer, rounded silhouette—wide, rounded shoulders, rounded, full or balloon sleeves, a trend toward rounded, extended hiplines. Skirts were as full and as long as the law allowed. Suits again added small collars and were well fitted at the waist; many were belted. The deeper armholes, soft rounded or drop shoulders, deep yokes, color insets or braid, trapunto or embroidery trim were new features. Jackets grew longer and tunics reappeared. Notable were black fitted suits of faille, tulle, or more for dress-up occasions. In fact, the dressy black suit in gabardine or faille became a star of the year. This was often worn with beautiful blonde fur stoles or fur capes. Introduced later in the spring were suits with the Dandy look inspired by Napoleon's time. Thus they were worn with stock or scarf, jewelry chate-laine, tall hat, umbrella and over-shoulder bag.

The box coat on the overcoat type continued as a classic and the well fitted dress coat made its entrance as a new spring fashion. This fitted dress coat with or without fur developed into a prominent fall fashion, the shortcoat declining sharply for fall, but the box coat again continuing with fur tuxedos or fur linings or also without fur. Coat colors followed the color gamut and though black was very important the neutrals followed closely in second place.

In summer, dresses and playsuits showed throat, arms, one or both shoulders, midriff or went to the opposite extreme with high necklines, long sleeves, longer hemlines, capes, scarfs or stoles. The summer of 1946 saw more sophisticated fashions in contradistinction to the little-girl fashions of 1945. All lengths from slacks to shorts in the styles in feminine pants were popular, but "pedal-pushers" of the just-below-the-knee or regulation skirt length were smartest and gained much popularity.

Elegance prevailed for fall and winter, in fancy fabrics, rich colors, extravagant jewel, bead, fur, and embroidery trim, luxurious furs, and lavish jewelry. There was a revival of formal evening clothes as well as a growth of glittering cocktail fashions. Billowing sleeves marked all fashions from blouses to furs, balloon sleeves usually, pushed up above the elbow. Dress necklines continued

very high or daringly low. The small waistline was further accentuated. The skirt line, still restricted and narrow, was broken by draping, swag, side, pannier, or low harem drapes. Skirts lengthened, edging the law. A few, dipping unevenly, defied it. Peplums, bustles, fishtails, back dips were featured. New were hoods or head swathing in both casual and formal fashions, the short formal dress, and the swashbuckling greatcoats. Suits added collar, cuffs, and important pockets, and were notable, like dresses, for important sleeves, back interest, and Paris-inspired cutaways. Menswear worsteds in fancy patterns and pretty colors were used in the newest looking suits although gabardine in black, brown, and at least twelve other colors, was still most popular.

Favorite furs were nutria, Persian lamb, mink, and muskrat in new mutations, stone marten, and newly released and fashionable mouton, which became the big popular fur coat for young Americans, retailing well under two hundred dollars. The three-quarter length fur coat was considered smartest, though the majority of wearers still preferred long, fuller coats for practicality.

Accessories increased in use too, their coordination again emphasized. In spring, straw hats returned, especially large straw hats, white, black, and toast shades with flowers and open crowns, ripple brims leading. Fall hats were lavishly with imaginative feathers in addition to ostrich, gold, jewel trim. Shoes in favor showed contrast from flat-heeled casuals to very high-heeled open-toed dressy sling pumps with  $\frac{1}{2}$ - to 1-inch platform soles.

Fall saw a returning trend toward the closed toe and closed back pump. Roomy over-shoulder bags were the outstanding daytime bag fashion inspired by those worn by women in the Armed Services. For dress-up, smaller pouch bags and boxy shapes were favored. Gold frames returned after a wartime absence. Demand continued for heavy gold real and costume jewelry—link, cuff bracelets, worn often in groups, large bulky clip earrings, conspicuous pins. Diamonds and their cousins, rhinestones, returned. Scarfs, larger, more elaborate, and varied, grew increasingly popular, particularly those with glitter or sequin, and those made of conversational prints. Belts were much worn especially wide leather belts with brass buckles, nailheads, or insignia. Gold kid belts in many widths became a fashion from sports to evening.

As the year closed, American designers, freely interpreting Paris fashions, anticipated greater freedom in styles for the spring. The feeling of "one world in fashion" prevailed, with no one city ever again the world fashion center.

Tobé.

**SUEZ CANAL.** A sea-level canal across the Isthmus of Suez, connecting the Mediterranean and the Red Sea. Operated by the French-controlled Suez Canal Company, which holds a concession (expires Nov. 17, 1968) from the Egyptian Government, the canal is normally the main route between maritime Europe and the ports of the Indian and western Pacific oceans.

Cargo traffic on the canal declined from the peak of 36,129,101 net registered tons carried by ships in the calendar year 1937 to 13,092,615 tons carried in 1940, 8,263,000 tons in 1941 and 7,028,000 tons in 1942. In 1945 net registered tonnage passing through the canal reached 25,065,000, with the United States shipping 22 percent of the total.

**SVALBARD.** An arctic archipelago (10° to 35° E. and 74° to 81° N.) owned by Norway. The princi-

pal islands are West Spitsbergen (or Mainland), North East Land, Prince Charles Foreland, Edge Island, Barents Land, King Karl's Land, Hope Island, and Bear Island (69 sq. mi.). Total area, 24,294 square miles. Population on January 1, 1940, about 1,000. Green Harbor (capital), New Aalesund, Coles Bay, Longyearbyen, and Braganza Bay were the main settlements, all on the western coast of West Spitsbergen. Coal was the chief product (806,000 metric tons in 1938 and 540,963 in 1940). Iron, asbestos, and gypsum exist. Most of the inhabitants were evacuated during September, 1941. The archipelago commands the route over which Allied war supplies were sent to the Russian port of Murmansk during World War II.

**SWAZILAND.** A British protectorate in southern Africa, at the southeastern corner of the Transvaal. Area, 6,705 square miles. Population (1936 census), 156,715. Capital, Mbabane. The territory is administered by a resident commissioner acting for the High Commissioner for the British High Commission Territories in South Africa. Native chiefs continue to rule their tribes. Agriculture and grazing are important and the territory also produces gold and asbestos. Swaziland is united with South Africa for customs purposes. Resident Commissioner, E. K. Featherstone, appointed 1942.

**SWEDEN.** A constitutional monarchy of Scandinavia. Sovereign, Gustav V, who succeeded to the throne on Dec. 8, 1907. Area, 173,398 square miles. The estimated population on Jan. 1, 1945, was 6,597,348 (6,250,500 at the 1935 census). Vital statistics (rate per 1,000) for 1943: births 19.3, deaths 10.1, marriages 9.5, infant mortality 29. Chief cities (with estimated population figures for 1944): Stockholm (capital) 635,534, Göteborg 290,486, Malmö 163,213, Norrköping 73,353, Helsingborg 64,087.

**Education and Religion.** Education in the public elementary schools is free and compulsory. Children not attending schools under government supervision must furnish proof of having been privately educated. In 1942 the elementary schools had 529,750 students. The 162 secondary schools, in 1944, had a total 57,283 students; in addition there were military, navigation, agriculture, veterinary, and other special schools. In 1944 the universities at Göteborg, Lund, Stockholm, and Uppsala had a total of 8,937 students enrolled. The majority (90 percent) of the population adhere to the Lutheran Protestant Church. Protestant Dissenters, Roman Catholics, Jews, and some others make up the minority.

**Government.** The Constitution of 1809, as subsequently amended, vested executive power in a hereditary King, acting under the advice of a Council of State (Cabinet), which is responsible to the Diet or Riksdag. The Upper Chamber of the Riksdag has 150 members, one-eighth of whom are elected annually by provincial and city councils; the Lower Chamber has 230 members, elected by direct male and female suffrage for four years. Party strength in the Lower Chamber, as a result of the general election of Sept. 17, 1944: Social-Democrats 115, Conservatives 39, Agrarians 35, People's Party (Liberals) 26, Communists 15. Prime Minister, appointed July 31, 1945: Per Albin Hansson.

**Events, 1946.** The first months of the year saw Sweden engaged in a diplomatic tug-of-war with the Allies about the disposition of German assets in the country. Early in January, the liquidation of German enterprises and investments in Sweden got

under way, the proceeds going to the Refugee Capital Administration. On February 27 it was announced in Stockholm that the United States, Britain and France had sent a formal invitation to Sweden to discuss the German funds at a conference in Washington. The invitation was accepted and a three-man delegation was sent to Washington, where the talks opened on May 31.

For several weeks the negotiations were stalled by Swedish insistence that the German assets—which were at first valued at \$85,000,000 but later were conceded to be worth about \$104,000,000—be used in the first place to compensate Swedish corporations for losses sustained in Germany, including machinery removed for reparations account; these Swedish claims on Germany were said to total \$250,000,000. The Allied negotiators, on the other hand, maintained that the question of the machinery removed from plants located in Germany should be taken up with the occupying powers directly and that it did not affect the Allies' claim to German property in Sweden. In this dispute, the Allies had a strong bargaining point in the fact that \$200,000,000 of Swedish assets in the United States had been frozen during the war and were being held pending a settlement of the German assets question.

On July 18, it was announced in Washington that an agreement in the matter had been reached. Sweden promised to turn over to the Allies, in one form or another, about \$77,000,000 from the proceeds of sequestered German assets; the remainder was to be used for the settlement of Swedish clearing claims against Germany. At the same time, the United States agreed to release the blocked Swedish funds and to abolish the wartime blacklist against certain Swedish nationals. The Allies also agreed to compensate Sweden for any losses resulting from removals on reparations account effected in Germany.

**Significant Elections.** Elections for municipal councils and provincial assemblies (landsting) took place on September 15. While it did not have the immediate political importance of the general election to the Lower Chamber of the Riksdag in 1944, the poll nonetheless was significant as a barometer of changing political sentiment and also because the members of the Upper Chamber are elected by the provincial assemblies and municipal councils.

Chief winner of the election was the People's party (Liberals) which for the first time in many years took second place, after the Social-Democrats. The latter lost 69 seats, but remained by far the strongest party. The Conservatives lost 62 seats and polled even fewer votes than in 1944, despite the heavier turnout. The Communists made new gains, especially in the big cities, Stockholm and Gothenburg. The Farmers improved their position somewhat. The following table, comparing the number of votes gathered by each of the major parties in three successive elections, will illustrate the changing political trend:

Political Party	1942	1944	1946
	Landsting Election	General Election	Landsting Election
Social-Democrats . .	1,453,288	1,436,571	1,454,283
People's party . . .	358,183	398,203	506,911
Conservatives . . . .	509,984	488,921	468,594
Farmers' Union . . .	381,011	421,094	446,831
Communists	170,856	318,466	367,097

Although the outcome of the election was generally interpreted as a warning to the Social-Democrats that they were losing some of their popular support to the Communists, there were no immediate repercussions. The Social-Democrats, who

controlled exactly one half of the seats in the Lower Chamber and still had a majority in the Upper House, saw no need for either giving up the reins of government, or sharing it with any other party.

**Erlander Takes the Helm.** Within a few weeks, however, Death commanded a change of government. The entire Swedish nation was stunned and shocked when on the early morning of October 6 the radio announced that 60-year-old Premier Per Albin Hansson had suddenly died the night before. For 14 years, Mr. Hansson had governed Sweden, with only a three months' interruption in 1936 of his long premiership; he had outlasted any other democratically chosen chief of government of his time. In the minds of people even more than in the Kanslihus (government headquarters) he left a void that was not easy to fill.

On October 9 the executive board of the Social-Democratic party met to elect a new chairman—the post Per Albin Hansson had held for 21 years. Contrary to widely circulated forecasts, the committee's choice did not fall on either of the two "favorites," Minister of Social Affairs Gustav Moeller and Minister of Finance Ernest Wigforss, but on a "dark horse," Minister of Education Tage Erlander, 45.

In accordance with parliamentary tradition, King Gustav V, on October 10, appointed the new head of the majority party as chief of government. There were no other Cabinet changes except for the appointment of Josef Weijne to succeed Mr. Erlander as Minister of Education. Professor Oosten Unden, who in the brief interval had been Acting Premier, was retained as Foreign Minister.

**The Russian Treaty.** Premier Hansson passed away at a crucial moment in the nation's history. A few hours before his death he had sent instructions to a Swedish trade delegation in Moscow to sign one of the most controversial treaties of the year: the one-billion-kronor trade and credit agreement with Russia.

Several months of arduous spadework and of lively international debate had preceded the signing of this compact. Toward the end of May, a Swedish trade delegation went to Moscow for preliminary discussions. It was informed that Russia, besides a substantial increase in commercial exchanges between the two countries, desired a large credit to finance additional purchases in Sweden. The Russians asked for credits totalling one billion Kronor (\$250,000,000 at the time), to be spent over a period of five years.

This was a startling amount for a small country like Sweden; it meant that for the next few years roughly 10 percent of the country's export business would be on credit. Moreover, it meant a sudden jump by Russia from the very bottom of Sweden's list of customers to second place. It also meant that Russia, in the postwar period, would play a role in Swedish affairs not unlike that played by Germany before, and during the war. The Swedes were not blind to the fact that a trade relationship of this type between a great and a small power seldom goes without some political by-effects. The Conservative and Liberal press in Sweden campaigned vigorously against the proposed terms, partly for political reasons, partly on the ground that Sweden's economy would be unable to bear such a strain.

In the midst of this controversy, the Riksbank (Central Bank) on July 12 suddenly raised the value of the Swedish Krona by 14 percent. The appreciation of the Swedish currency in relation to the dollar and the pound sterling was explained as a move to prevent threatening inflation in Sweden.

Its immediate effect was to make imports cheaper, while Swedish export products became costlier—especially to the United States and Great Britain.

On August 25, the United States, in twin notes to Stockholm and Moscow, protested against the Swedish-Russian trade and credit agreement then under consideration. The notes complained that a bilateral deal of this type was liable to conflict with United Nations plans for expanded multilateral commerce. The protest was directed only against the commercial aspects of the proposed agreement, not against its credit features.

Sweden replied on August 29 in a note expressing surprise at the American protest and reiterating Swedish adherence to liberal and multilateral trade principles. At the same time, the Stockholm Government reserved "complete freedom of decision as to the opportuneness of concluding such bilateral agreements as well as of adhering to an eventual international commercial arrangement." The Soviet Government also rejected the American protest. Expressing "extreme surprise," the Russian note declared that "the Government of the Soviet Union and, as one may assume, the Government of Sweden, stand in no need to make a point of consultation with the United States on the favorableness or unfavorableness of a trade agreement."

The Swedish-Russian trade talks were resumed on September 4 in Moscow and led to the signing of a treaty on October 8. In its final form, the agreement differed but little from the original Russian proposals. Sweden extended to Russia a credit of 1,000,000,000 Kronor (\$279,000,000 at the new rate), to be used up over a period of five years and repayable in fifteen years at an interest rate of 3 percent after the first three years. In addition, the two countries arranged for an exchange of goods valued at 100,000,000 Kronor annually. Swedish exports to Russia are to consist principally of high-quality steel products, electrical machinery, mining equipment, building materials, locomotives and trawlers. A joint Swedish-Soviet communique commented that the two countries desired "to develop their economic relations in accordance with their own interests as close neighbors." The treaty was finally ratified by the Riksdag in mid-November, despite continued strong opposition from certain industrial groups and newspapers.

**The Economic Situation.** Industrial production remained at high levels throughout the year. In the early part of the summer, the index of industrial activity stood at 129, taking the 1939 average as 100. Later in the year a slight recession occurred, due in particular to a serious labor shortage. At least 50,000 additional workers were needed, especially in the industries charged with fulfilment of the promised deliveries to Russia, and toward the end of the year plans were afoot to import a large number of workers from Italy and other foreign countries. The Europe-wide coal shortage also had a restraining influence on Swedish production.

There was a world-wide demand for such Swedish staples as wood pulp, high-quality steel products, machinery, ball-bearings etc. Shipments of iron ore, which had been almost completely halted when Germany collapsed were resumed on a fairly large scale, with the United States, Great Britain, France and Belgium as the principal customers. In contrast with 1945 there was uninterrupted peace on the labor front.

The food situation, too, was comparatively good, although the harvest in the western provinces was seriously damaged by floods in the fall. Rationing of foodstuffs in relatively short supply, such as bread, flour, butter, meat, and sugar was expected

to continue at least well into 1947. The total caloric intake of the Swedish consumer was among the highest in Europe—2,600 calories daily per person.

**Sweden Joins United Nations.** On June 27, the Riksdag voted unanimously to authorize the Government to apply for membership in the United Nations. The formal application was made on August 9 and was well received by both the Security Council and the General Assembly. On November 19 Sweden was definitively admitted to the United Nations as the 54th member.

**Foreign Trade.** In 1945 Sweden's imports were valued at 1,087,000,000 kronor (1,664,400,000 kronor in 1944); exports, 1,724,000,000 kronor (830,000,000 kronor). The principal import and export commodities were animal and vegetable products; minerals and metals; chemical products, drugs, dyes, lacquers, soaps, and fertilizers; hides and skins, rubber, textile materials; wood products, pulp, paper, etc.; machinery, transportation equipment, and instruments.

**Finance.** Budget estimates (for the fiscal year to June 30, 1946): revenue 3,208,988,000 kronor (3,186,400,000 kronor for 1944-45); expenditure 3,169,000,000 kronor (4,416,000,000 kronor). In 1943-44 actual revenue totaled 3,106,200,000 kronor; actual expenditure, 4,072,000,000 kronor. Expenditure (included in the foregoing figures) for national defense amounted to 2,030,000,000 kronor in the 1944-45 budget and to 2,122,000,000 kronor in 1943-44. The public debt increased from 2,634,000,000 kronor on June 30, 1939, to 11,550,000,000 kronor on Sept. 30, 1945. Currency notes in circulation on Sept. 30, 1945, totaled 2,567,000,000 kronor. The exchange rate of the krona from 1941-1945 was \$0.2385; 16.90 kronor = £1 sterling.

**Production.** The bread grain crop (wheat and rye) for 1944 totaled 899,500 metric tons. Feed grain crops (barley and oats) for 1944 totaled 1,413,000 metric tons. The sugar beet crop in 1944 was 1,803,000 metric tons (1,868,257 in 1943) harvested from 136,000 acres. Potatoes harvested in 1944 totaled 1,448,700 metric tons. Among the other important crops are hay, fodder, roots, peas, beans, and vetches. Livestock (1944 census): 2,834,177 cattle, 1,041,074 swine, 599,490 horses, 551,830 sheep, and 9,055,916 chickens.

Mineral and metallurgical output during 1945 included coal, iron ore, pig iron, ferro-alloys, steel ingots, manganese ore, tungsten, copper, zinc, aluminum, peat, and shale oil. In 1944, 4,583,000 tons of iron ore were exported. Ball bearings, cream separators, lighthouse apparatus, telephone supplies, motors, and many kinds of electrical machinery are produced by the metallurgical industries. The public forests cover an area of 30,000 square miles. Wood-pulp output in 1943 totaled 1,240,000 metric tons. Other important industries are the manufacture of porcelain, glass, and textiles. In 1941 there were 18,757 industrial factories, with a total of 550,000 employees; total power used amounted to 4,643,673 effective horsepower.

**Transportation.** The roads of Sweden, on July 1, 1944, totaled 55,750 miles. At the end of 1944 the railroads totaled 16,717 kilometres, of which 11,177 kilometres miles were owned by the state. Commercial airlines link the chief cities and maintain services, together with foreign companies, with nearby foreign countries. The Swedish mercantile marine, on July 1, 1945, comprised 2,094 ships aggregating 1,569,141 gross tons.

JOACHIM JOESTEN.

**SWIMMING.** The postwar era in the aquatic sport was officially opened with the major indoor meets

of last spring and members of the swimming fraternity, never too respectful of records, cracked marks with such rapidity that the record keepers had not caught up with them when 1946 drew to a close.

Ranked high among the individual feats of the year was the stellar performance of Joe Verdeur of the Philadelphia Turners in the national A.A.U. indoor championships at Bainbridge, Maryland. The Navy Specialist Second Class—but a first-class merman—won the 220-yard breast stroke and 300-yard medley titles, cracking one standard after another on his way to victory in the former event. In his trial heat of the 220, Verdeur hit the 200-yard line in 2:19.5 for a new world record and he was clocked in 2:35.6 for 200 meters, a time that clipped the universal standard for that distance. His 2:35.6 for the 220 yards surpassed both the meet and American records for the event.

In addition to his sparkling indoor triumphs, the Philadelphian swam off with the 200-meter crown in the national A.A.U. outdoor competition.

Ohio state made a sweep of team honors in the major indoor meets, capturing the Western Conference and A.A.U. championships and retaining its National Collegiate Athletic Association laurels. Jack Hill, free-style expert and Miller Anderson, diving ace, were the most consistent scorers all year for the well-balanced Buckeye squad.

Jimmy McLane, 15-year-old Akron (Ohio) boy, hailed by many coaches as one of the greatest prospects of all time, added considerable luster to his reputation by scoring a triple in the national A.A.U. outdoor championships at San Diego. Jimmy swept the 400, 800 and 1,500-meter events and set a new meet record of 19.23.1 for the 1,500. His three victories equalled similar achievements by such aquatic greats as Johnny Weissmuller, Buster Crabbe, Jack Medica, Ralph Flanagan and Keo Nakama, but none accomplished the feat at an age comparable to Jimmy's.

The more photogenic members of the swimming cast were not bashful either when it came to smashing records and one meet alone, the women's national A.A.U. indoor championships at Seattle, saw 14 American and meet marks come tumbling down.

Once again comely Miss Ann Curtis, free-style star of San Francisco's Crystal Plunge Club, proved the dominant figure among the feminine swimmers. Although she lost her A.A.U. 100-yard title to Miss Brenda Helser of the Multnomah A.C. of Portland, Oregon, Ann retained her 220 and 440-yard laurels indoors, then repeated her triumphs of the year before in the 400 and 800-meter tests outdoors. Miss Helser also took the 100-meter crown outdoors when Queen Ann left that title undefended to enter the 1,500-meter race in which she won handily.

Among other naiads consistently in the sports headlines of 1946 were Misses Nancy Merki, Suzanne Zimmerman, Patricia Sinclair, Florence Schmitt and Zoe Ann Olsen, the last-named the best of the divers. Misses Merki and Zimmerman each annexed three national titles during the year while Misses Sinclair and Olsen each accounted for two.

THOMAS V. HANEY.

**SWISS ARTS.** The drastic isolation which Switzerland endured during the war has had numerous repercussions on her artistic life. For years her greatest sources of inspiration were cut off, and only he who knows what Paris means to the French-speaking Swiss, and what Florence or Rome, or Munich and

Vienna, meant ten years ago to the inhabitant of the Italian or German regions, can truly appreciate the feeling of frustration which the Swiss painter or musician must have experienced when suddenly left to himself.

This, however, gave him a chance to reexamine his own resources and, in so doing, to rediscover his native country. The Swiss artist was in the habit of imagining that the air of Paris or the light of Florence was indispensable to artistic creation. But he found that the Swiss landscape could inspire him, too. He had, of course, to adapt himself to the Swiss scale, which is small and sometimes narrow.

There were other consequences of this artistic autarchy. Special care was given to the classics and "éditions de luxe," the Swiss applying all their traditional craftsmanship to this new task. How much they have succeeded will be left for American book lovers to judge when the Swiss Book Exhibition comes to the States in summer 1947.

The appearance of an indigenous Swiss motion picture art during this period should be mentioned. *Marie-Louise*, the story of a little French girl hospitalized in Switzerland, and *The Last Chance*, a report on the refugee drama, are now being successfully shown in several countries. These two films are genuinely Swiss. They have sprung, as it were, from the milieu and the moment, and in this they are fully in the tradition of Swiss art which is always closely linked to the life of the people.

Swiss artists may again go back to their Parisian studios. Again precious books and pictures can move across borders and, in spite of difficulty in transportation and communication, a lively exchange is going on. Only this year part of the collection of the London Tate Gallery has been shown in Berne, the treasures of the Milan Ambrosiana in Lucerne and those of the Austrian museums in Zurich. In September the "Rencontres internationales" summoned to Geneva some of Europe's keenest thinkers. Thus Switzerland is quickly resuming her traditional role as the center, the "carrefour" where artists, writers, scientists can meet, talk, and work in an atmosphere of frankness and civility.

In the eastern part of the country painting and sculpture seem in the ascendant. In fact, exhibitions follow each other in such rapid succession that it is difficult to keep track of all the new names. Among the coming painters let us mention Surbek, Lauterburg, and Ciolina, in Berne, Morgenthaler in Zurich; Pellegrini and Barth in Basle—all worthy successors of the older group: Auberjonois, Barraud, Blanchet, Cuno Amiet, and Giacometti. Sculptors such as Franz Fischer of Basle, Hubacher and Geiser of Zurich, and Remo Rossi of Locarno have all attracted a good deal of attention at the recent National Exhibition in Geneva (September 1–October 13).

This has been an eventful year for the music lover, too. Not only could he welcome Arturo Toscanini again and several famous international orchestras, but he was offered a wealth of new works by native composers. Othmar Schoeck gave a new cycle of songs: *Das Stille Leuchten* (*The Peaceful Glow*), Arthur Honegger his *Symphonie Liturgique*. During the Theatrical Weeks held in Zurich, the young composer Heinrich Sutermeister scored a well-deserved success with a new two-act opera, *Niobe*. Frank Martin, who recently left his native country to settle in Amsterdam, wound up a series of notable productions by the *Cornette*, a suite of twenty-three songs on a poem by Rilke. Frank Martin's reputation is growing rapidly, while names

like Wissmer, Maresscotti, Reichel, Oboussier, and Burkhard allow one to look confidently to the Swiss musical production of tomorrow.

In closing this all too brief survey of present-day artistic life in Switzerland, mention should be made of two particular points of interest. First the happy and, for Switzerland, unusual development of the feminine contribution to art and literature. This was remarkably illustrated on the occasion of the third Women's Congress in Zurich where Swiss women not only read from their books but staged a successful painting and sculpture exhibition of their own.

The attraction of Anglo-Saxon culture is powerful and general. Swiss artists look more and more towards England for guidance and inspiration. The influence of America is strongly felt, too, particularly in the field of literature. Of every three novels read in Switzerland now, one is almost sure to be American. More people are learning English than ever before and this is bound to have a growing influence on the artistic life of the country in the years to come.

**SWISS LITERATURE.** The increase of Swiss book production is still growing steadily. According to the statistics of the National Library at Berne, more than four thousand books were published in 1945 as compared to three thousand three hundred fifty-eight in 1943. Of these publications, two thousand six hundred thirty-eight were in German, ninety-nine in French, eighty-eight in Italian, seventeen in Raeto-Romansh, and sixty-six in other languages, mostly English, and thirty-one polyglot. A considerable number of these publications have been written by foreign authors who were condemned to silence in their own countries and by English and American writers of fiction.

Switzerland wanted to help those countries whose publishing processes had come to an almost complete standstill and was, moreover, stimulated by the earnest desire to resume cultural relations with foreign countries.

Translations of English and American books have become more and more numerous and are very popular in Switzerland. Some of these foreign authors have chosen Switzerland for their permanent home. Some are even naturalized Swiss, as for instance, Herman Hesse, who was awarded the Nobel Literary Prize for 1946. Two of his books *Steppenwolf* and *Death and the Lover* have been translated into English.

The Swiss authors seem to be interested in two lines: Some deal with our own Swiss problems: politics, education, and religion, namely, K. I. Naef: *Schweiz, das Herz Europas*; F. de Diesbach: *Vérité sur la Suisse* and W. Schmid: *Schweizerische Aussenpolitik gestern und morgen*.

Others try to help Switzerland in fulfilling her self-chosen task—her "European Mission." Stressing humanistic tendencies, expounding the lasting values of old European culture, teaching the world her Swiss conception of true freedom and tolerance, and contributing what her centuries-old tradition enables her to give, typified in the following: A. V. Martin: *Nietzsche und Burckhardt*; W. J. Oehler: *Ueber die Mauern hinaus*, A. Keller: *Zeitwende*; C. Eichelberg: *Auftrag Technik*; R. Grob: *Schlagwort oder Glaube*; H. Luthy: *Bis zur Neige*, and W. Ruegg: *Cicero und der Humanismus*.

Every domain of learning, art, culture, and poetry is represented: philosophy and psychology, religion, law, economics and social sciences, politics, education, school textbooks, children's books, literature and language, natural sciences and mathe-

matics, medicine, architecture, technology, agriculture, domestic economy, fine arts, music, fiction, history, biography, geography, travel, mountaineering.

Before the war, books of fiction amounted to 20 percent of entire book production, but now to even more than 30 percent. There are two principal groups: The traditional Swiss novel, depicting Swiss people, customs, nature; and the novel of psychology, which deals with all kinds of problems in love, marriage and life. The bulk of these books have a moral tendency, as pointing out, for example, the dangers of egotism or the importance of self-sacrifice. Under this classification fall: G. V. Planta: *Die Wetter Arve*; F. V. Caviezel: *Silvia Marugg*; O. Feier: *Menschen im Tal*; H. Zullinger: *Die 7 Geschichten vom schlauen Balz*; Maurice Zermatten: *Christine*; L. Schips-Lienert: *Der Himnswagen*; J. Frohmeyer: *Judith*.

In the domain of education, school textbooks and children's books, the output is steadily increasing. Switzerland wants to supply her children with a good, solid education. The *Editiones Helveticae*, a collection of inexpensive textbooks for use in schools is the result of the collaboration of several Swiss firms. In the same line of development, belongs the attempt to popularize the literary heritage of Europe by means of the cheap editions of the Birkhauser Verlag as: C. T. Jung: *Psychologie und Erziehung* and R. Kolb: *Demokratische Erziehung*.

The national food emergencies during and after the war caused a great number of publications on agriculture to appear, for example: A. Schmid: *Das Zeitbild der Schweizer Rinderzucht*; O. Howald: *Arbeitstechnik im Bauernbetrieb*; and Chavannes/Demont: *Le contrôle du lait*.

The general inner tension, the mental fear, doubt, and despair prompted books on religion and art as both provide peace and oblivion. The following are typical: R. Gutzwiller: *Grundlagen einer Neuordnung*; O. Schuepp: *Schöpfungsbericht*; M. Geilinger: *Vom grossen Einklang*; P. de Chastonnay: *Introibo*; H. Ball: *Die Flucht aus der Zeit*; O. Bauhofer: *Der Mensch und die Kunst*; H. Jenny: *Kunstführer der Schweiz*; M. Ott: *Das Ornament im bauerlichen Kunsthandwerk des Kantons Appenzell*; A. E. Cherbuliez: *J. S. Bach*, and W. Reich: *Bekenntnis zu Mozart*; *Das Atlantisbuch der Musik*.

The books of science are an essential and indispensable requirement to the scientists. Several publishers concentrate their efforts in publishing the necessary number of this type of book. For the natural sciences and medicine, law and sociology, many new plans are about to be put into effect. The Swiss scientific books are written by the best scientists, carefully planned and executed, based on rich experience and modern research. Switzerland tries hard to fill the big gap left by the standstill of German production. In the above-named category fall the following: M. Saegesser: *Spezielle chirurgische Therapie*; R. Brun: *Allgemeine Neurosenlehre*; Baumgartner/Riva: *Panikulitis, die herdförmige Fettgewebeerkrankung*; Brandenberger/Schmiz: *Ueber die Natur der Verkalkungen bei Mensch und Tier*; R. Leriche: *Die Chirurgie im Einklang mit dem Leben*; E. Abberhalden: *Lehrbuch der physiologischen Chemie*; and E. Zwinggli: *Versicherungsmathematik*.

The books about the various professions, such as crafts, trade and commerce are rapidly developing and increasing in number. Many new schools have been opened and there is a large demand for books. The Swiss worker, famous for the high quality

work, has to keep pace with technical progress. Typical of such books are the following: W. Gruss: *Die Auswahl des reisenden Verkäufers*; A. Lombard: *Der Massivmöbelbau*; E. Gut: *Die Geheimnisse der Eisenbahn*; H. Flury: *Buch- und Bilanzprüfung*; Elektrowirtschaft Zurich: *Elektrizität und Bauen*; L. Bellmont: *Das Buch vom Telephon*; A. Bruckner: *Schweizer Stempelschneider und Schriftgesser*; Rust/Schoch: *Warenkunde und Industriellehre*; and J. Zimmermann: *Betriebsführung im Detailhandel*.

The Swiss illustrated book maintains a high standard and careful execution. M. Hurlimann says in his article on: "Switzerland and Swiss Books": "Illustrations by living artists have been introduced into popular editions. Particular skill has been developed in the printing of illustrations. Today art publications and various periodicals bear witness to what can be done by rotogravure, offset and blocks, monochrome as well as polychrome." And H. Lehmann-Haupt writes in: "Notes on the Exhibition" (International Book Illustration 1935-1945). "Some of the most progressive graphic work comes from Switzerland. It would be difficult to find another country where trade books at moderate price levels are illustrated with so much character, beauty and technical competence." Illustrative of this skill are: A. Baur: *Cuno Amiet*; Rudolf Koller-Mappe, H. Zbinden: *A. Anker*; Gradmann & Cetto: *Schweizer Malerei und Zeichnung im 17. und 18. Jahrhundert*; M. Racher: *Schweizer Maler aus dem 15. Jahrhundert*; P. Meyer: *Schweizer Münster und Kathedralen des Mittelalters*; O. Fusli Verlag: *Die Lithographie in der Schweiz und die verwandten Techniken 1894-1944*.

Swiss poetry has experienced a great spurt forward. After the big breakdown of this period many poets want to communicate what they have suffered and to praise what they have admired. Modern Swiss poetry stresses, in many respects, a deeply religious attitude. The following are typical: H. Hiltbrunner: *Heimwärts*; E. Schneider: *Ich suche Dich*; Urs Martin Strub: *Lyrik*.

The periodicals play a rather important role in intellectual Swiss life. The scientific periodicals have met with great interest abroad. The five subjects most frequently dealt with in Swiss periodicals are: sixteen literary reviews, history of literature, philology; twenty-six periodicals about law, economics and political sciences; thirty periodicals about medicine, hygiene; twenty-three periodicals about architecture, technology; thirteen periodicals about fine arts, history of art.

A bold enterprise, the Swiss Encyclopaedia *Schweizer Lexikon*, in seven volumes, the first of which appeared in 1945 manifests an impartial objective attitude.

The two striking features of recent Swiss book publications are: the many books of world-wide interest and the high standards of production. There is also much more stress laid on the outward appearance of the books which have to be aesthetically satisfying. One general tendency of Swiss publishers is to grant every opinion, language, and culture their hospitality, to reflect the world and acknowledge no limits of time or space.

To make known Swiss intellectual life, culture, outlook, and aspirations as reflected in Swiss books, some exhibitions are planned for 1946 and 1947. A general book exhibition has taken place at London (April-May 1946) and an exhibition of illustrated books at New York (September-October), sponsored by the American Institute of Graphic Arts.

DORA C. VISCHER.

**SWITZERLAND.** A federated republic in west-central Europe. Area: 15,944 square miles. Population (June 1945 estimate): 4,403,000, compared with (1941 census) 4,265,703. Vital statistics for 1945 (rate per 1,000): births 20.1, deaths 11.6, marriages 8.1, infant mortality (deaths under one year per 1,000 live births) 41. Chief cities (1941 census): Berne, the capital, 130,331; Zurich, 336,395; Basel (Basle) 162,105; Geneva 124,431; Lausanne 92,541; St. Gallen 62,530; Winterthur 58,883; Lucerne (Luzern) 54,716.

**Education and Religion.** Education is compulsory, the school age varying in the several cantons. Primary education is free. In 1944-45 there were 441,476 students in primary schools, 74,447 students in secondary and lower middle schools, and 12,182 students (1945-46) in the universities. Religious affiliations (1941 census): 2,457,242 Protestants; 1,754,204 Roman Catholics; and 19,429 Jews.

**Production.** Agricultural pursuits employ 20.8 percent of the population. Twenty-two percent of the land area is unproductive. The main crops (1945; in metric tons) were: wheat 223,000, potatoes 1,613,000, fruit 460,000, sugar beets, and vegetables. Livestock (1946): 1,472,226 cattle (including 815,482 cows), 654,253 pigs, 206,459 goats, 194,759 sheep, and 151,941 horses. In 1945 the output of milk totaled 560,042,000 U.S. gallons.

Minerals produced included salt, iron ore, aluminum, and manganese. Manufactures of importance include watches, clocks, machinery, textiles, electric equipment, chemicals, shoes, cheese, condensed milk, etc. In 1945 a total of 435,603 employees were employed in the 9,537 factories. The output of peat in 1943 totaled 420,000 metric tons. In the same year the production of beer reached 22 million gallons.

**Foreign Trade.** In 1945 imports were 1,225,000,000 Swiss francs (1,186,000,000 in 1944); exports 1,474,000,000 Swiss francs (1,132,000,000 in 1944). The main trading countries in prewar times were Germany, France, Italy, Great Britain, United States, and Argentina. A great deal of the trade with frontier countries is transit trade.

**Finance.** Budget (1946): ordinary revenue 331,200,000 francs, extraordinary revenue 1,516,100,000; ordinary expenditure 691,100,000 francs, extraordinary expenditure 1,676,500,000 francs.

**Government.** The Constitution of 1874 provides a republican confederation of 22 cantons or States. The Federal Assembly consists of two chambers; one, the Council of States, is composed of 44 members—two from each canton; the other chamber, the National Council, has 194 members, all elected quadrennially by the obligatory vote of males who have attained 20 years of age. The Federal Council consists of seven members, all elected quadrennially by vote of the united chambers of the Federal Assembly; by similar vote, but annually, are chosen, from among the seven, a President of the Confederation and a Vice President of the Federal Council. Each of the Federal Council's seven members is assigned to the direction of one of the seven Federal administrative departments. During 1946 the President was Dr. Karl Kobelt. President for 1947: Dr. Philippe Etter of Zug canton. Vice President for 1947: Dr. Enrico Celio.

**Events. Back to Normalcy.** As a traditionally neutral federal democracy, the Swiss community constitutes a self-sufficient polity, little affected by the tides of radicalism and reaction afflicting all its neighbors. But as a highly industrialized land, dependent for the livelihood of its people on imports of raw materials, foodstuffs, metals, coal, and

tourists, and on exports of manufactures, on scenery and hospitality, the Swiss community is a far from self-sufficient economy. Its government leaders were primarily concerned in 1946 with efforts to restore foreign trade—and, as means thereto, to settle the controversies growing out of the war and to counteract the impression entertained by many abroad that Switzerland had waxed fat through aid to the Axis and had since become a haven for Nazi funds.

Restoration of foreign trade was facilitated by a series of loan agreements, of which the most important was the Anglo-Swiss accord concluded early in March. By its terms Britain obtained a Swiss credit of 250,000,000 francs (\$60,000,000), in return for which London agreed to increase its purchases of Swiss exports and to permit tourists to exchange pounds for francs up to £100. The Swiss Government reserved 800,000,000 francs for such credits, the objective of which was to increase foreign purchases of Swiss goods. The value of Swiss exports during 1946 was almost double that for 1945 and was well above the prewar figures in value, though not yet in volume. In May, 1945, 6,650 foreigners registered in Swiss hotels. In May, 1946, the figure rose to 100,500. The country escaped almost all the economic ills of its neighbors and enjoyed a high degree of prosperity which promised to increase in 1947.

**Capitalism in One Country.** Switzerland, like the United States, promoted its export trade by making loans abroad. And just as America remained the only Great Power in the world community still committed to *laissez-faire* and a relatively unregulated free enterprise system, so Switzerland remained the only country on the Continent which resisted the trend toward socialization and national economic planning. The Communist Party, outlawed in 1940, remained outlawed. Despite gains in cantonal elections by the "Party of Labor" (allegedly the successor to the Communists) the basic conservatism of the Swiss people found expression in a variety of ways.

The special wartime powers exercised by the Federal Government were largely abolished during the year, along with many forms of public control over economic life. In local referenda, votes for women were rejected by large majorities in Geneva, Ticino, Zurich, Basle, and other cantons. Early in December the cantons and the electorate decisively rejected an initiative proposition aimed at including a guarantee of the right to work in the Federal Constitution. On December 16 the National Council, 108 to 50, recommended the rejection of various Socialist proposals for economic reforms. A program of old-age insurance was approved by both houses of the Federal Parliament and would be submitted to popular referendum early in 1947. But the general trend of Swiss opinion toward a view of the economic and social order comparable to that of American ultra-conservatives was unmistakable.

This ideological affinity between Wall Street and Bern might have been expected to promote American-Swiss cordiality and Soviet-Swiss friction. Curiously enough, the actual pattern of Switzerland's foreign relations exhibited the reverse of any such expectation. Moscow, as always, was quite prepared to do business with capitalists if the capitalists were prepared to do business. But Washington and Bern quarreled over business (see below) and indulged in shrewd bargaining which did not make for official cordiality.

**Relations with the Soviet Union.** Switzerland's tangled ties with the major United Nations were

partially unraveled during 1946. On March 19 diplomatic relations were formally established with the Union of Soviet Socialist Republics for the first time since the rupture of 1924. Mutually advantageous trade arrangements with Poland and Hungary were concluded soon afterward, affording new markets for Swiss machine tools, drugs, and textiles and making available new sources of coal, iron, zinc, timber, bauxite, and fodder. In August a new company was formed with 60 percent Swiss capital and 40 percent Soviet capital (invested through a Rumanian corporation) to take over the distribution of Rumanian oil products in the Swiss market. The arrangement was apparently satisfactory to all concerned save Royal Dutch Shell and certain American oil companies which, before the war, held important properties in the Rumanian oil fields and dominated the market for petroleum products in Switzerland.

Earlier anticipations that the resumption of relations with Moscow might contribute to the establishment of the United Nations in Switzerland were disappointed, however, not by virtue of Soviet policy, which now favored the idea, but because of decisions reached in Berne and New York. In June the Swiss Government informed United Nations that it could not allow meetings of the Security Council in Geneva in view of the danger that action ordered by the Council from Swiss soil might be considered a breach of Swiss neutrality. Similar considerations continued to deter Berne from making application for Swiss membership in United Nations.

By agreement among all concerned, Switzerland placed the former premises of the League of Nations in Geneva at the disposal of United Nations for the possible establishment of European headquarters, with the qualification that no military operations were to be conducted from Geneva. The International Labor Organization made plans to return to Geneva. On December 11 Switzerland became a member of the International Court of Justice by vote of the United Nations General Assembly. The Republic also joined the United Nations Food and Agriculture Organization and participated in the Paris conference of UNESCO.

**The Problem of German Assets.** Allied pressure on Switzerland to turn over German-owned assets to the Allied Control Council ruling the Reich and to provide for their liquidation on reparations accounts continued to meet with Swiss resistance (see YEAR BOOK for 1945, pp. 594-597). Walter Stucki of the Swiss Federal Council, head of the Foreign Affairs Division of the Federal Political Department, arrived in Washington in mid-March at the head of a delegation including Professor William E. Rappard. In the ensuing negotiations the Swiss spokesmen reiterated that their Government was under no obligation under international law to transfer such assets and was prevented by Swiss law from doing so in many instances. To American estimates of total German assets of \$750,000,000 in Switzerland, Berne's representatives replied that the total was only \$250,000,000—to which Switzerland was entitled as a means of settling the German deficit, of almost exactly equivalent amount, in the wartime German-Swiss clearing agreement. Dr. Stucki, however, waived this deficit claim on March 26.

In the protracted parleys which followed, the Swiss delegates continued to resist Allied demands but were impressed with the facts that the United States was still blocking \$1,500,000,000 of Swiss assets in America and maintaining its wartime blacklists against many Swiss firms. "Nothing will

move us," wrote the *Basler Nachrichten* in April. "We will not yield to pressure or relinquish our sovereign rights." Finally on May 25 an accord was reached in Washington whereby Switzerland agreed to transfer 50 percent of fugitive Nazi capital to the Allies and turn over \$58,140,000 of the \$90,000,000 of stolen gold deposited by the Nazi authorities in Switzerland during hostilities. Disputed cases were to be deferred to arbitration. But inquiries from Washington regarding the implementation of the accord remained unanswered until the end of August. As a result, Swiss assets in the United States continued to be blocked until the signature in Berne of a further agreement on November 10. Switzerland agreed late in November to reveal the names of German and Japanese nationals with accounts in Swiss banks, but still refused to comply with American demands for the names of Austrian, Hungarian, Rumanian, and Bulgarian depositors. Many details of the compromise settlement still remained to be worked out at the end of the year.

**Rescue Party.** The friction engendered by these controversies was pleasantly relieved, at least so far as Swiss and American opinion was concerned, by the dramatic episode of late November near the summit of the Gauli Glacier above Meiringen. Here a Dakota C-53, carrying twelve Americans, made a crash landing on November 19. Due to the inaccessibility of the site, at an elevation of 11,000 feet, the passengers, several of whom were injured, were obliged to spend five days and nights on the ice. Swiss planes dropped supplies and radio equipment. A sixty-man rescue squad finally reached the scene and two Swiss ski-planes, in nine shuttle trips, rescued the marooned travelers while millions of vicarious participants in the perilous adventure cheered in both countries.

FREDERICK L. SCHUMAN.

**SYRIA AND LEBANON.** Two Arab republics, also known as the Levant States, on the east coast of the Mediterranean between Turkey and Palestine. The mandate over them was conferred on France by the League of Nations on July 24, 1922. Their independence has been proclaimed on several occasions since 1941, and had become complete by the end of 1946. The area of Syria and Lebanon together is about 57,900 square miles. Damascus is the capital of Syria, and Beirut of Lebanon.

**Population.** The population of Syria in 1943 was 2,860,411, and of Lebanon, 1,047,745. The principal cities, with their estimated populations are: Damascus, 275,000, Aleppo, 265,000; and Beirut, 250,000. The population of Syria, and more particularly of Lebanon, is far from homogeneous, either racially or religiously. Although Arabic is the official language and is spoken by the majority of the inhabitants, there are important minorities of Armenians, Circassians, Jews, Turks, Turkomans, Kurds and others, including Europeans.

In Syria the majority is Moslem, mostly Sunni. In Lebanon the Christians constitute from 55 percent to 60 percent of the population, but are divided among themselves into various sects of which the Maronites, Greek Orthodox, Greek Catholics (Uniates), Armenians and Melkites are the most important numerically (in the order named). These and other denominations are also found in smaller numbers in Syria. Each of these churches has its own ecclesiastical organization and hierarchy. Altogether the racial and religious mosaic of which the two republics consist is a fruitful source of political complications, both domestic and foreign.

#### **PIONEER HONORED**

Colonel C. S. Irvine, commander of the B 29 *Pacusan Dreamboat* that flew from Hawaii to Cairo over the Polar Regions, receives the Distinguished Flying Cross from General Carl Spaatz.

Education is provided by both government and private schools. The latter are sponsored by the various religious communities and by foreign missionary and cultural organizations. In Lebanon the Christian schools far outnumber those operated by the State and the Moslems. The contrary is true in Syria. At Beirut there is the American University and the French Catholic Université de St. Joseph, each offering a varied curriculum. Higher education in Syria is provided by the Arab University at Damascus.

**The Country and Its Economy.** Lebanon is a small country consisting of a narrow coastal plain and the Lebanon range which rises immediately behind it. There is little room for agriculture except in small tracts, many of which are terraced. However, rainfall is more plentiful here than in the interior. The central valley of Syria is fertile and relatively well watered. But east of the Anti-Lebanon Mountains the desert begins, and here nomadic pasturing and oasis culture are the rule. Little of the original forest cover remains on the mountains of either country, the famous Cedars of Lebanon being all but extinct.

The principal products of the soil, and their estimated output for both countries in 1943 were: wheat, 624,280 metric tons, barley, 330,485 metric tons; grapes, 292,622 metric tons; olives, 134,339 metric tons; figs, 54,178 metric tons; sorghum, 44,246 metric tons. Figures for the same year showed 2,492,000 sheep, 1,573,000 goats, 490,000 horses, 287,000 donkeys and 54,000 camels.

Few minerals are exploited, and these in small quantities. Further geological exploration may reveal resources not now known. Factories are few and on a small scale, but political independence will very likely lead to increased industrialization. One of the pipelines from the Kirkuk oil field terminates at Tripoli in the Lebanese Republic.

Foreign trade figures for 1943 gave imports a value of 246,171,000 Syrian Pounds and exports as worth 168,065,000 Syrian Pounds. The two principal ports, both in Lebanon, are Beirut and Tripoli. There are over 1,000 miles of railroad, including the Syrian segment of the Istanbul-Baghdad line, the Aleppo-Damascus line, the Homs-Tripoli-Beirut-Haifa line (completed during the recent war) and the narrow gage Mecca railway running south from Damascus to Trans-Jordan. Beirut and Damascus are connected by a narrow-gage, partly cog-wheel line, but the highway now carries much of the traffic between these points. Several of the great inter-continental airlines pass through Syria.

**Government.** For the prewar political status of Syria and Lebanon under French mandate see the *YEAR BOOK* for 1941, p. 638. For political developments since 1941 see the *YEAR BOOKS* for 1942 et seq. Each country is now recognized as an independent republic with its own constitution. Each has a President and a Parliament. Following the agreement of Dec 27, 1943, between the French Committee of National Liberation and the two republics, there took place a gradual transfer of certain powers and functions from the former to the latter. This process was completed by the events of 1946 (see below).

**Events.** By all odds, the outstanding development of the year in the two Levant States was the final attainment of independence, marked specifically by the departure of French and British military forces. The year did not, however, begin too auspiciously, with the arrival of a small detachment (ca 200) of Senegalese troops to replace some of the 600 French soldiers who had been

evacuated from the two countries during the previous three months. At the same time the Syrian Deputies voted unanimously to protest to the United Nations against the continued presence of foreign troops. Some 2,000 French troops in Syria were confined to their barracks when, on January 2, the inhabitants of Damascus, Beirut, and Aleppo carried out a general strike against the military occupation.

While both Britain and France were committed to getting out of the Levant States, they were not in accord as to the time-table. There were far more British troops in Syria than French, and originally the British intention seems to have been to move their units from Syria to Lebanon, and evacuate the latter only when the French were ready to go. The Levant States themselves favored this plan, as a guarantee for eventual French withdrawal. However, early in January it was learned that the British were expecting to remove their troops directly from Syria to Palestine and that they had also been asked to evacuate Lebanon.

In any event, it was obvious that the days of French political and military importance in the Levant were over, and that even her cultural influence was waning, especially in Syria. Relations with the latter were so bad that there was no hope whatever of obtaining a treaty of alliance similar to that of Iraq with Great Britain, whereby France might retain use of certain bases and other facilities. To what extent British influence would supplant that lost by France remained to be seen. Some observers noted that a number of British officers appeared to be entering the service of the two Republics.

On February 5 the Lebanese and Syrian Republics, invoking Article 34 of the Charter, asked the United Nations Security Council to recommend the "total and simultaneous evacuation" of French and British troops from their territories. On February 14 the Council sought to take up the question but got bogged down in procedural disputes. On the following day French Foreign Minister Bidault and the British representative on the Security Council, Sir Alexander Cadogan, promised that the Anglo-French agreement concerning the withdrawal of their troops from the Levant States would be carried out. The United States suggested that the dispute be settled by direct negotiations. On February 16 Syria and Lebanon agreed to accept the Anglo-French engagement to withdraw, but the Soviet delegate vetoed the American proposal, thereby only confusing matters needlessly. On February 18 the British and French governments drafted identical directives for their military representatives in order to speed up their negotiations concerning the details of how and when the Levant States were to be evacuated.

Finally on March 1 delegates from Britain, France, Lebanon, and Syria met in Paris. At that time there were believed to be 11,000 British and 1,700 French troops in Syria, and 9,000 British and 8,000 French troops in Lebanon. By March 4 it was announced that Britain and France had agreed to withdraw their troops from Syria by April 30, and that this movement of forces would commence March 11. Six days later the conference decided that Britain would evacuate Lebanon by June 30, and that the French forces would be out by April 1, 1947. The reason for waiting a full year was explained by technical considerations, such as the necessity of going by sea (when ships were very scarce) and the existence of a vast amount of matériel and installations erected during some twenty-five years of French rule, which could not easily

Education is provided by both government and private schools. The latter are sponsored by the various religious communities and by foreign missionary and cultural organizations. The United States suggested that the dispute be settled by direct negotiations. On February 16 Syria and Lebanon agreed to accept the Anglo-French engagement to withdraw, but the Soviet delegate vetoed the American proposal, thereby only confusing matters needlessly. On February 18 the British and French governments drafted identical directives for their military representatives in order to speed up their negotiations concerning the details of how and when the Levant States were to be evacuated.

Finally on March 1 delegates from Britain, France, Lebanon, and Syria met in Paris. At that time there were believed to be 11,000 British and 1,700 French troops in Syria, and 9,000 British and 8,000 French troops in Lebanon. By March 4 it was announced that Britain and France had agreed to withdraw their troops from Syria by April 30, and that this movement of forces would commence March 11. Six days later the conference decided that Britain would evacuate Lebanon by June 30, and that the French forces would be out by April 1, 1947. The reason for waiting a full year was explained by technical considerations, such as the necessity of going by sea (when ships were very scarce) and the existence of a vast amount of matériel and installations erected during some twenty-five years of French rule, which could not easily

be dismantled and removed. In reality the French soon found it advisable to advance the date of their evacuation, so that by September 1 only thirty officers and 300 men in civilian dress remained in Lebanon.

Meanwhile, April 17 had been celebrated as a gala day throughout Syria, for it marked the departure of the last French troops two weeks ahead of schedule. On hand to join in the festivities were Abdul Rahman Azzam Pasha, Secretary-General of the Arab League, and other dignitaries from neighboring states. The Kuwaty Ministry resigned on April 25, the parliament was dissolved, and elections were called in order that the Syrian people might vote in their new-found freedom. Great Britain informed the Security Council on May 3 that its troops would be out of Lebanon by June 30 except for a "small liquidation force." This promise was carried out to the letter, and by September 30 even this small staff had been withdrawn, thus bringing to a conclusion the British occupation of the former French mandated territories.

The attainment of complete independence encouraged the two Republics to lay plans for reviving and developing their economies. In Syria the program called *inter alia* for the modernization and expansion of irrigation on the Euphrates and for the importation of all sorts of machinery and tools. All this of course would require money, which the Syrian government hoped to borrow from the United States Export-Import Bank, with the expectation of repaying the loan with agricultural exports. However, it was reported in September that American negotiators were experiencing difficulty at Damascus in discussing oil pipeline and air transport agreements at Damascus with the Syrian authorities because of the pro-Zionist stand of the United States government.

The economic situation of Lebanon was somewhat more fortunate than that of Syria. It had no debt and its treasury showed a surplus, though inflation was causing some anxiety in financial circles. Reliance was placed on the country's strategic commercial position, its tourist attractions and its fruit production as a means of creating foreign exchange with which the needed imports could be bought.

On April 8 the Vatican recognized the independence of the Lebanon. At the other end of the political spectrum it may be noted that on September 9 the first Lebanese Minister to the Soviet Union left for Moscow. The Lebanon was one of the few Middle Eastern countries where a Communist organization of any importance was operating. Dispatches from Beirut early in February reported that eight offices had been opened there in order to register Armenians who wanted to go to Soviet Armenia. By the 3rd there were 8,000 registrations and many more were expected by the time the lists were closed on the 28th. Fears were expressed among the Christian element that this emigration would still further reduce their already tenuous majority over the Moslems in the Republic.

A report from Beirut at the beginning of November stated that the Lebanese government had agreed to purchase the British-built wartime railroad between the Palestine border at Ras en-Nakura and Tripoli, for five million Lebanese Pounds, payable in seven yearly instalments.

On December 15 the composition of a new cabinet, led by Riad es Solh as premier, was announced in Beirut. On December 28, after long inter-party negotiations, a new Syrian cabinet was announced in Damascus, headed by Jamil Mardam Bey, the Nationalist leader.

During the year Lebanon served as a member of the United Nations Economic and Social Council, and in December Syria was elected to the Security Council.

ROBERT GALE WOOLBERT.

**TANGANYIKA.** A territory in East Africa administered, since 1919, by Great Britain under a League of Nations mandate. Area, 360,000 square miles. Population (1944 estimate), 5,499,739, of whom 5,437,069 are natives. Capital, Dar-es-Salaam (74,036). In 1946 the territory was recommended by Great Britain for United Nations trusteeship and accepted. The territory is administered by a governor with the assistance of an executive council and a legislative council. Schools for Europeans and Africans are maintained by the government and the majority of Indian schools are given grants in aid.

**Production and Trade.** The territory has extensive forest areas producing camphor, mvule, mahogany, and other woods. Agriculture, the chief occupation of the people, furnishes a variety of cereals, vegetables, and fruits for home consumption as well as the country's chief export, sisal. In 1944 Tanganyika exported 111,848 tons of sisal, or about one-third of the world supply. Cotton, coffee, and hides and skins are also exported in quantity. The chief imports are cotton goods and iron and steel products.

**TANGIER.** An Internationalized Zone in northwestern Morocco at the Atlantic entrance to the Strait of Gibraltar. Area, 225 square miles, and population (1941), about 100,000. Over half the population dwells in the city of Tangier.

Tangier forms part of the Empire of Morocco, the Sultan being represented there by a Mendoub. For a description of the regime set up by the Tangier Convention of Dec. 18, 1923, as amended on July 25, 1928, see YEAR BOOK for 1941, p. 729. This international government was overthrown on June 14, 1940, when troops from Spanish Morocco occupied the Zone, ostensibly to guarantee its neutrality. For further details see YEAR BOOK for 1944, p. 610. In 1945 representatives of the United States, Great Britain, France, and the Soviet Union met in Paris to revise the statute governing Tangier, but failed to reach an agreement (see YEAR BOOK for 1945, pp. 599-600). The official languages in the Tangier Zone are French, Spanish, and Arabic. The education of the native Moslems is left largely to the Koranic schools, though both the French and Spanish authorities maintain several educational institutions, to some of which natives are admitted.

The Tangier Zone has very little agricultural production and must import much of its food. Through its port, however, passes a considerable transit commerce, much of which is carried over the railway to Fez and other points in the French Zone. As a rule imports exceed exports in a ratio of eight or more to one.

**Events.** The provisional international administration of Tangier, as set up in an agreement signed at Paris on August 31, 1945 (see YEAR BOOK for 1945, pp. 599-600), continued to function throughout the year. It had originally been planned that a more permanent arrangement should be negotiated during 1946. But the preoccupation of the Great Powers with the European peace treaties, and the uncertain diplomatic situation of Spain, no doubt made it seem advisable to postpone the regulation of Tangier's status to a more propitious moment.

This provisional international administration was headed by Admiral Magalhães Correia of the Portuguese Navy. In the legislative assembly, France and Spain had four members each; Britain and Italy three each; the United States, Belgium, the Netherlands and Portugal one each. The natives were also represented by several members, chosen by the Mendoub, who in turn was the creature of the Sultan of Morocco. The Committee of Control consisted of a consular representative from each of these Powers. Under the agreement of August 1945, the Soviet Union was entitled to have a consular official at Tangier and a member in the legislative assembly. But Moscow showed no hurry about filling these posts, presumably because it was unwilling to have Soviet representatives sit alongside those of Franco Spain.

There was some complaint in Tangier that, though the administration was ostensibly international, it was in reality under thinly disguised French control. In addition to the French votes in the assembly, those of the natives were, it was asserted, subject to orders from the Sultan of Morocco, that is to say, from the French officials at Rabat. The Moorish nationalist movement operated in Tangier as one of its principal headquarters and published a newspaper with a substantial circulation (see SPANISH AFRICA). In mid-September the authorities at Gibraltar sent a small vessel with troops to Tangier "to protect British interests" there in view of a threatened Moorish demonstration.

Economically, Tangier enjoyed a relatively prosperous year. In addition to its favorable location on the Strait of Gibraltar, its low customs duties and its freedom from the scars of war, the International Zone also offered, because of its peculiar legal status, a haven for refugee capital.

ROBERT GALE WOOLBERT.

**TARIFF COMMISSION, U.S.** An independent nonpartisan agency of the U.S. Government, created in 1916, which investigates and reports upon tariff matters. It also handles cases of unfair practices in import trade. The Committee makes such investigations and reports and furnishes such information as may be required by the President, the House Ways and Means Committee, the Senate Finance Committee, or either branch of Congress. The work of the Commission falls into two groups, general administration and auxiliary services under the Secretary, and professional, scientific, and technical work under the Planning and Reviewing Committee. Chairman: Oscar B. Ryder.

**TAXATION.** While no new revenue law was passed by Congress during 1946, tax policy was a major issue in the November Congressional elections. Republican candidates promised an "across-the-board" reduction of 10-20 percent in personal income tax rates, if elected, and substantial reductions in Federal expenditures to make this possible without producing a budget deficit. The Administration, on the other hand, maintained that tax reductions were not desirable in a period when inflation was threatened, particularly because expenditures could not be reduced further, and opposed the Republican proposal.

On the last day of the year, the President proclaimed the cessation of hostilities. By this action, the higher wartime excise taxes on alcoholic beverages, furs, luggage, and other luxury items which were scheduled to terminate six months after the close of hostilities would expire on July 1, 1947. The President's budget message, however, pro-

posed continuation of wartime rates in order to provide a surplus of receipts for debt retirement in the 1947-8 fiscal year. The President estimated that continuation of the wartime excise rates would increase tax collections in the 1948 fiscal year by \$1,130,000,000.

The President's budget message also proposed an increase in postal rates sufficient to wipe out the postal deficit. He suggested legislation under which the Federal Deposit Insurance Corporation, the Federal Land Banks, and the Federal Home Loan Banks would return \$379,000,000 of capital formerly provided by the Treasury to the Government, which would be taken in as receipts for the year by the Treasury.

Two contrasting views with regard to Federal tax reduction were apparent in business circles. On the one hand, it was argued that a period of prosperity furnished a good opportunity to reduce the public debt by maintaining tax collections while reducing expenditures. On the other hand, advocates of tax reductions argued that lower income-tax rates would provide a powerful incentive to increase incomes, so that they would actually raise tax receipts by the government.

The President's tax policy proposals were summarized in his budget message as follows:

"As previously indicated, I cannot recommend tax reduction. The responsibilities of the Federal Government cannot be fully met in the fiscal year 1948 at a lower cost than here indicated. Even if the cost were less it would be desirable in our present economic situation to maintain revenues in order to make a start toward the repayment of the national debt. At the present time, in my judgment, high taxes contribute to the welfare and security of the country."

"Under the wartime tax system, millions of taxpayers with small incomes are called upon to pay high taxes. When the time comes for taxes to be reduced, these taxpayers will have a high priority among the claimants for tax relief."

"I have recommended that the war excise-tax rates to expire July 1, 1947 be continued. When the time comes for excise-tax revision, the Congress should review the entire group of excise taxes rather than concentrate attention on those that were imposed or increased during the war."

"Our long-run tax program must be designed to maintain purchasing power and provide incentives for a high level of production."

**Corporation Taxes.** Congressional leaders favoring an immediate reduction in personal income taxes favored postponement of changes in corporation levies until 1948. The Treasury issued in December a comprehensive study of the question of eliminating or reducing double taxation of corporate income used to pay dividends, evidently for the purpose of heading off efforts to legislate on this question.

Double taxation arises when, after a corporation has paid an income tax upon its profits, part of the balance is distributed as dividends to stockholders. Recipients of these dividends then pay a personal income tax, the second levy imposed upon the same income.

The Treasury study considered four proposals for ending such double taxation. These are:

1. Elimination of the corporate income tax, to be offset by higher personal income and undistributed profits taxes.

2. Taxation of corporate profits at personal income-tax rates, whether these profits are distributed or not. This could be done either by (a) taxing corporations as partnerships, so that each stockholder would include in his taxable income his pro rata share of corporate profits, or (b) by collecting a tax from the corporation equivalent to what shareholders would pay if all profits were distributed.

3. Allowing corporations to deduct from taxable income the amount of dividends paid out, so that such earnings would be taxed only in the hands of the stockholder.

4. Giving stockholders a credit for taxes already paid by the corporation for dividends they receive through (a) a tax credit on personal income-tax returns; (b) a dividends-received credit; and (c) exclusion of dividends received from individual taxable income.

Finding objections to all of these proposals, the Treasury pointed out further that they would reduce tax collections under normal economic conditions by an amount varying from \$800,000,000 to \$1,400,000,000 annually, depending upon the proposal adopted. The fear was expressed also that a change in the method of taxing dividends giving windfalls to existing stockholders could touch off a speculative boom in the stock market. Of all the alternatives, taxing corporations like partnerships

was considered least objectionable from the Treasury's viewpoint.

JULES I. BOGEN.

**TAX COURT OF THE UNITED STATES.** An independent agency of the U.S. Government (formerly the U.S. Board of Tax Appeals, created by the Revenue Act of 1924). Its function is to determine, after hearing, whether there is a deficiency or an overpayment, where deficiencies have been determined by the Commissioner of Internal Revenue, in income, profits, estate, gift, and unjust enrichment taxes, and personal holding company surtaxes; to adjudicate controversies relating to excess profits on Navy contracts and Army aircraft contracts; and to review the action of the Commissioner in deficiency and refund cases founded on claims of abnormalities under excess profits and processing tax statutes. Presiding Judge: Bolon B. Turner.

**TEA.** For tea, as for so many other basic commodities, 1946 was a year of uncertainty complicated by wartime problems. The world supply situation continued tight and by the end of the year it was apparent that many months must elapse before world tea production and trade could return to pre-war "normalcy."

The war cut the allied nations off from all the principal tea-producing areas except India and Ceylon, fortunately the two largest producers. These two countries intensified and expanded their production and their increased output was allocated among the allied nations. The United States' share was bought up by the United States government through the United States Commercial Company which imported the tea and sold it to the American trade.

Because of this government-trade arrangement equitable distribution of available tea supplies was achieved. Although supplies at one time were as

\* Six months ending December 31, 1946.

low as 50 percent of normal (normal prewar consumption was about 90 million pounds a year) tea was never rationed in the United States.

On March 31, 1946—less than a year after the Japanese surrender—the United States government turned its war born tea importing business back to the trade. An import licensing system was substituted as a means of insuring equitable distribution of the United States allocation among the various importing firms. About the same time the Combined Food Board set the United States allocation of India and Ceylon tea for the tea year, April 1, 1946, to April 1, 1947, at about 82 million pounds, only slightly below normal. In addition, a few million pounds of China and Japan teas were imported. Thus the United States was assured of more or less adequate, though by no means copious, supplies of tea in a tight world market during the period of the contract.

Meantime, price controls were maintained at prewar levels until October 23, 1946, when the OPA dropped controls on all except a few very tight commodities. Thus the United States got through the war years and the first postwar year with comparatively plentiful tea available at reasonably low prices.

**World Tea Picture.** The world tea picture was not so bright. In India and Ceylon labor shortages and the general political unrest created grave problems. The tea plantations of Java and Sumatra, together the third leading prewar exporting region, were greatly damaged by the Japanese during the war and virtually no tea was coming from them. China and Japan, the green tea producers, were able to export only very small quantities and oolong tea from Formosa remained a prewar memory as far as the Western World was concerned. These and other developments were cheerless news to hundreds of millions of people, for tea is the world's most popular beverage. More of it is consumed than any other beverage except water itself.

The latest estimated figures for world consumption of tea were compiled by the Tea Bureau, Inc. in 1939, shortly before the outbreak of World War II. According to these figures a total of 1,997,000,000 pounds of tea was consumed throughout the world in 1939. That is enough tea, on the conservative basis of 160 cups to the pound, to brew more than 300 billion cups.

The United States is second in consumption among the importing nations and fourth among all the nations of the world. According to Tea Bureau figures China led in the consumption of tea with about 800 million pounds in 1939. She was followed by the United Kingdom, 469 million, India, 111 million; United States, 97 million; Japan, 75 million; Russia, 63 million; Australia, 51 million; Canada, 43 million; Holland, 29 million; Eire, 23 million; and Netherlands East Indies, 21 million.

The approximately 100 million pounds normally consumed in the United States each year, enough to make about 20 billion cups, was supplied before the war by the following countries in the indicated amounts: India and Ceylon, 43 million pounds; Java and Sumatra, 37 million pounds; Japan and Formosa, 14 million pounds; and China and Africa, 6 million pounds.

**United States Consumption Trend.** Probably the most interesting tea consumption trend in the United States has been the swing to black tea since the end of World War I. When the United States entered that war, the country as a whole preferred green tea. In 1915 about 30 percent of the tea drunk here was black tea. By 1920 black tea consumption had risen to about half of the total. From

then on the black tea imports gained steadily while greens and oolongs fell off. By 1941 about 90 percent of tea drunk in this country was black tea.

During the war years the United States imported black tea exclusively, the greens and oolongs being largely in Japanese hands. It cannot yet be said whether the green and oolongs will, in the postwar period, regain even their limited prewar popularity.

Surveys indicate there are three basic reasons for the American preference for black tea. Americans have always preferred "body" to their drinks and the rich color of black tea lives up to the eye appeal requirements of consumers in this country. It is the most vigorous and masculine of the three kinds of tea. A third reason is that black tea makes the most pleasing iced tea.

**American Standards Maintained.** One thing certain was that the quality of tea imported for American consumers would continue to be of first-rate quality. By law, no tea is admitted to this country until it has been tested by United States tea examiners to insure its being up to standards set jointly by the government and the trade. These standards, the highest in the world, have been maintained at prewar levels and they guarantee that all tea for sale in the United States is good tea.

WILLIAM D. CARTER.

**TEMPORARY CONTROLS, Office of.** On December 12, 1946, the President issued Executive Order 9809 providing for the disposition of certain of the war agencies and the assumption of their remaining functions and liquidation by an Office of Temporary Controls. The order consolidated the Office of War Mobilization and Reconversion, the Office of Economic Stabilization, the Office of Price Administration, and the Civilian Production Administration. The principal functions of the new agency were the sugar rationing and rent control programs of the OPA and the remaining powers of the Civilian Production Administration (q.v.).

Major General Philip B. Fleming was appointed to head the new agency in addition to his duties as Federal Works Administrator. At the same time, the President announced the appointment of John R. Steelman, who had headed the OWMR, as Assistant to the President to aid in coordinating programs and policies of federal agencies.

JOHN D. SMALL.

**TENNESSEE VALLEY AUTHORITY (TVA).** A corporation created by Congress in 1933 to develop the Tennessee River System in the interest of navigation, control of floods, and the generation and disposition of hydroelectric power. It conducts a program of water control and conservation, including fertilizer research. The TVA is constructing a system of dams (q.v.) which will provide a nine-foot navigable channel from the mouth of the river near Paducah, Ky., to Knoxville, Tenn., 648 river miles. The Tennessee basin includes parts of seven States, an area of 41,000 square miles with a population of about 3,000,000. See **WATERWAYS**.

The Corporation's power-producing system has an installed capacity of 2,500,000 kilowatts.

As of December 31, 1945, the corporation had contracts for sale of power at wholesale with 92 municipalities, 3 counties, 46 cooperatives, and 3 privately owned utility companies (in addition to contracts for purchase or interchange of power with 19 private companies). These agencies (the private companies excluded) distribute power to more than 600,000 ultimate consumers under retail rates agreed upon with the Authority. The cor-

poration had contracts for bulk sales of firm and secondary power with 10 large industrial concerns. It is also providing power to 13 projects, plants, and bases of Federal agencies.

During the fiscal year 1945 the Authority's power sales exceeded 10,000,000,000 kw-hr and its gross revenues from the sale of power were nearly \$39,000,000. Chairman: Gordon R. Clapp.

**TENNIS.** The revival of the Davis Cup and women's Wightman Cup competitions, along with the Wimbledon and French championships gave tennis its greatest year since 1939. Late in December the game produced one of 1946's real international sports classics when a brilliant band of racket-wielders representing the United States invaded Australia and brought back the Davis Cup, symbolic of world net supremacy. The Aussies had held the famous trophy since winning it from this country in 1939, after which competition was suspended for the duration of the war.

America's stars, chosen by non-playing captain Walter Pate, furnished one of the major sports surprises of the year when they swept over the cup defenders, 5 to 0, after crushing all opposition in the qualifying rounds and turning back Sweden in the inter-zone final for the right to challenge Australia. Ted Schroeder of Glendale, California, national champion in 1942, but unranked the past season because of insufficient tournament play, proved the big star in the cup competition which required three days and was witnessed by 41,500 spectators.

The victors got away winging in the opening singles matches when Schroeder defeated Jack Bromwich, Australia's big gun, in a torrid battle, 3-6, 6-1, 6-2, 0-6, 6-3, while Jack Kramer, United States champion from Montebello, California, took the measure of the sensational Dinny Pails, 8-6, 6-2, 9-7. Then Schroeder teamed with Kramer the following day to clinch the cup, the invaders routing Bromwich and Adrian Quist, 6-2, 7-5, 6-4, in the decisive doubles match.

With the famous prize already won, the Americans, hailed by the host nation as "the most unforgettable athletes ever to visit Australia," showed no let-up in the concluding matches. When Kramer subdued Bromwich, 8-6, 6-4, 6-4 and Gardnar Mulloy of Miami, Florida, beat Pails, 6-3, 6-4, 6-4, the victors had completed the first shut-out in a Davis Cup challenge round since Great Britain turned the trick against the United States in 1935.

American women stars were equally successful in their invasion of England for a revival of the international series for the Wightman Cup, routing Britain's lassies without so much as the loss of a set in five singles and two doubles contests. Misses Pauline Betz of Los Angeles; Miss Margaret Osborne, San Francisco; Miss Louise Brough, Beverly Hills; Mrs. Patricia Canning Todd, La Jolla, California, and Miss Doris Hart of Miami, comprised the winning team.

Mrs. Hazel H. Wightman guided the play of the Americans, who gained the first shut-out since the series was inaugurated in 1923. Their triumph without the loss of a set marked the first such one-sided victory in the cup play and enabled the United States to keep the prized trophy, which it has held since 1931.

Following their cup conquest the American women continued their brilliant play to help capture four titles for the United States in the revived Wimbledon championships. The feminine singles title went to Miss Betz when she defeated Miss Brough, 6-2, 6-4, before 18,000 fans. But Miss

Brough had ample revenge before the day was over, pairing with Miss Osborne to win the doubles crown from Miss Betz and Miss Hart, 6-3, 2-6, 6-3 and teaming with Tom Brown, Jr., of San Francisco to defeat Geoff Brown of Australia and Mrs. Dorothy Bundy Cheney of Santa Monica, California, 6-4, 6-4, in the mixed doubles final.

Tom Brown and Kramer combined their talents to give the United States its fourth Wimbledon prize, conquering Geoff Brown and Pails in the men's doubles, 6-4, 6-4, 6-2. Yvon Petra of France carried off men's singles laurels, only title to elude the Americans, when he turned back Geoff Brown, 6-2, 6-4, 7-9, 5-7, 6-4, in an epic two-hour duel that matched some of the greatest battles ever witnessed on Wimbledon's famous center court.

Miss Brough added to her conquests abroad by defeating Miss Hart for singles honors in the Irish open tourney and then pairing with the loser to take the doubles final. Miss Osborne won the French crown with a victory over Miss Betz, 1-6, 8-6, 7-5. Marcel Bernard retained the French men's title by halting Jaroslav Drobny of Czechoslovakia 3-6, 2-6, 6-1, 6-4, 6-3, July 28. Misses Brough and Osborne also won tandem laurels in the Irish and Northern British tourneys.

Having tuned their weapons abroad, the American aces returned home to help make the United States championship tournament one of the best ever held at the West Side Stadium in Forest Hills. Climax of the competition—which broke all records for receipts and attendance—came in the men's final when Kramer, the former Coast Guard lieutenant, turned back Tom Brown, conqueror of the defending champion, Frankie Parker, by 9-7, 6-3, 6-0, before 14,000 spectators.

Miss Betz won the women's crown for the fourth time when she halted Miss Hart, 11-9, 6-3. Mrs. Sarah Palfrey Cooke, who had dethroned Pauline in 1945, did not compete the past year. The men's doubles title was captured by Mulloy and William Talbert of Wilmington, Delaware, while Misses Osborne and Brough retained the women's honors. Miss Osborne also paired with Talbert for the mixed championship.

Professional tennis continued along its way, with bigger and better competitions throughout the country. Don Budge of Los Angeles retained recognition as world clay court king while Bobby Riggs of Los Angeles became the national ruler. Riggs gained his title by halting Budge, 6-3, 6-1, 6-1, in the nineteenth annual pro tournament at Forest Hills, requiring only 56 minutes to halt his Coast rival.

THOMAS V. HANEY.

**TERRITORIES AND ISLAND POSSESSIONS, Division of.** The Division of the U.S. Department of the Interior which administers the territories and possessions of the United States. See the separate article on each. Director: Edwin G. Arnold.

**TEXTILE FOUNDATION, Inc.** A Foundation created in 1930 within the U.S. Department of Commerce to conduct research for the benefit and development of the textile industry and its allied branches.

Sixteen research associates are working in the laboratories of the Textile Foundation at the National Bureau of Standards on problems related to the war effort. These projects include investigations related to clothing for aviators; clothing for jungle troops; water repellency treatments for military fabrics; deterioration of military fabrics through exposure to the elements as well as to various types of chemicals; influence of different types of fibers

on the warmth and serviceability of blankets, underwear, and clothing; and shrink-proofing treatments for wool socks, underwear, etc. Chairman: Franklin W. Hobbs.

**TEXTILES.** For the textile industry, the year 1946 was one of rapid conversion from wartime to peacetime activities. Although the output of civilian goods during most of the year was restricted by price controls, over-all textile production in 1946 was well above that for 1939—the last “normal” prewar year. Production of cotton broad woven fabrics, for example, was approximately 9 billion yards in 1946, as compared with 8¼ billion yards in 1939 and 11 billion yards in 1942—the peak wartime year. At the end of the year it appeared that by mid-1947 output of textiles might equal the volume of orders, with production of some types of fabrics—notably woollens and worsteds—exceeding the demand even earlier. Among several important economic trends which were apparent in the textile industry, that toward the vertical integration of manufacturing, finishing, and converting operations is expected to be the most far-reaching in its effects. Most important among the various technical developments was the emphasis placed on the development of textiles to meet specific end-uses.

During the war years a high percentage of textile production was for military purposes. Military procurement of cotton fabrics for instance, averaged between 2½ to 3½ billion yards annually, or 25 to 35% of total output. In 1946 military requirements dropped to about 100 million yards. Termination of government contracts, which began in August, 1945, continued during the first part of 1946 in what, for the most part, was an orderly and satisfactory manner.

On November 9, 1946 price controls on textiles were lifted; and further decontrols appeared imminent, such as Civilian Production Administration regulations on set-asides of cotton, rayon, and other textiles designed to stimulate the production of low-cost garments and other scarce commodities.

TABLE I—INDEX OF TEXTILE ACTIVITY

Year	Index	Year	Index
1939 . . . . .	100	1943 . . . . .	142
1940 . . . . .	108	1944 . . . . .	134
1941 . . . . .	142	1945 . . . . .	130
1942 . . . . .	150	1946 . . . . .	138*

\* Estimated.

Textile mill activity, based on total fiber consumption was approximately 38% higher in 1946 than in 1939, and about 12% lower than 1942, the peak war year (See Table I. Index of Textile Activity). Production of various types of textiles in 1946 as compared with 1939 were as follows: cotton broad woven fabrics 9% higher; woolen and worsted fabrics 34% higher, representing a new peak of approximately 645 million square yards, rayon yarn and staple fiber 103% higher; rayon broad woven fabrics 24% higher; women's hosiery 25% lower. The high rate of textile production was achieved despite the fact that active textile machinery and textile machinery in place were somewhat lower than in 1939. For example, the number of active cotton spindles in 1946 averaged approximately 22,000,000 as compared with 23,700,000 in 1939, a decline of 7%; woolen and worsted looms in place averaged approximately 40,000 as compared with 44,700 in 1939, a decline of 15%.

The average number of wage earners in the textile industry during 1946 was approximately 1,180,000, or 7% over the number employed in 1939.

Average hourly earnings were up about 79% to 89.10 cents; average weekly earnings were up a little over 100% to \$34.28 (See Table III. Indices of Textile Employment). Output per man-hour showed virtually no change from 1939.

TABLE II—PRODUCTION OF COTTON AND WOOL GOODS

Year	Cotton Broad Woven Goods (Linear Yards)	Woolen and Worsted Fabrics (Square Yards)
1939 . . . . .	8,287,000,000	482,000,000

1945 . . . . .	94	174
1946 . . . . .	107	179*

\* Estimated.

Trends in the wholesale prices for textiles are indicated in Table IV. Whereas there has been a more or less steady advance during the period 1939–1946 in wholesale prices for textiles, other than rayon yarn and staple, there was a marked rise in 1946 in the wholesale prices for cotton fabrics. By July, 1946, higher raw-material, labor, and other production costs had forced the wholesale prices of cotton fabrics to over twice prewar prices.

TABLE IV—INDICES OF WHOLESALE PRICES FOR TEXTILES

It became apparent, despite the deficit of civilian supplies of cotton textiles built up during the war years, that there was little possibility this high price level could be sustained, and a downward readjustment of prices probably would be necessary in the not too distant future. This belief was further strengthened by a knowledge of the fact that textile inventories were rising (See Table V. Index of Textile Inventories). What may be the first definite sign of a drastic reduction in prices for cotton textiles occurred in October, 1946, when the price of raw cotton which had soared to a high of

TABLE V—INDEX OF TEXTILE INVENTORIES

\* Estimated

39.28 cents a pound began a series of sharp declines to 27.46 cents a pound on November 7.

Due chiefly to mergers, approximately 25% of all textile manufacturing equipment changed hands during the period 1944-1946. Because of this trend toward integration, which was particularly marked in 1946, there is a growing belief that the textile industry is entering an era of large mills groups, with a comparatively small number of companies dominating the field. Integration has been both horizontal, which is the merging of plants at the same level of production, and vertical, which is the merging of plants at different levels of production, such as spinning, weaving, and finishing. In several instances vertical integration has been carried to the stage which includes the manufacturer of garments and/or other types of consumer goods. It is too early to foresee all the effects of mill mergers. It appears certain, however, that there will be radical changes in textile distribution methods and that a shrinking grey-goods market will result from vertical integration in the cotton textile industry.

During the war a vast amount of work was carried out on the development of textiles to meet specific military requirements. Since the end of the war there has been a growing recognition of the importance of developing textiles to meet the requirements for specific consumer and industrial end uses. It has been found that in many instances the production of these "engineered" or "end-use" fabrics entails the development of new types of yarns and new cloth constructions.

In this endeavor to fit fabrics to their ultimate end-use, increasing attention is being paid to high-tenacity rayon, nylon, and other synthetics—either singly, in combinations with one another, or in conjunction with natural fibers. The possibilities of knitted fabrics versus woven fabrics is being explored. Wartime experience in rendering textiles water-repellent, wind-repellent, flameproof, shrink-resistant, etc., was translated into the production of durable, functional finishes on fabrics for civilian use.

Coupled with the use of these durable, functional finishes, has been the more extensive utilization of coloring materials, such as vat colors and pigment colors, which provide dyed and printed fabrics with excellent fastness to light, laundering, drycleaning, and other destructive agencies.

One development which has had an impact on the textile industry is the increase in production of plastic films. Plastic films found extensive application during the war for a variety of military purposes. With the end of the war, they began to find wide use, in place of textiles for shower curtains, window curtains, table cloths, rain coats, and other purposes. Recently developed methods for producing printed designs on plastic films have further enhanced the decorative properties of the films. Whereas the plastic films compete directly with woven fabrics for some end uses, the printing of these films has created new opportunities for the textile printers.

During the late 1930's the textile industry began to expand its facilities for fundamental and applied research. The year 1946 has witnessed the rebuilding and strengthening of research staffs which were depleted during the war and the further expansion of research facilities. Research projects which were temporarily suspended have been resumed and other investigations have been started.

Another trend which should be noted is that toward the increased production and utilization of synthetic fibers. In 1939 total yarn consumption was approximately 4 billion pounds, of which less

than 500 million pounds, or 12½%, was synthetics. Annual postwar yarn consumption is expected to total approximately 6 billion pounds, of which 1½ billion pounds, or 20%, will be rayon, nylon, and other synthetics. Of the total United States production of 690 million pounds of continuous-filament rayon, viscose process yarn accounted for approximately 69%; acetate rayon, 29%; cuprammonium rayon, 2%. Of the total production of 180 million pounds of rayon staple fiber, approximately 75% was the viscose type; and 25% the acetate type. During the war years production of viscose process continuous-filament rayon increased 66%, due mainly to the demand for tire-cord of high-tenacity viscose rayon, and the priorities given for building plants for producing this type of yarn. The fact that 50% of all viscose rayon yarn produced in 1946 was intended for tire-cords indicates the importance of this end use for high-tenacity rayon. Other present or potential uses for high-tenacity rayon include hosiery, sports clothes, shirtings, draperies, braids, cords, sewing thread, sail cloth, filter fabrics, and belting. The chief use for regular strength rayon is in the manufacture of woven and knitted apparel fabrics, including hosiery.

From the volume standpoint, nylon is the most important of the synthetic fibers other than rayon, and output will be further increased upon the completion of new plants projected in 1946. Before the war the principal use for nylon was for the manufacture of women's hosiery. During the war use of nylon was restricted to military purposes. With nylon again made available for civilian purposes, steps have been taken to broaden its fields of application to include a wide variety of apparel, household, and industrial fabrics both woven and knitted, as well as braids, cords, sewing thread, etc.

Among other synthetic fibers which have established textile applications are Vinyon, Saran, Velon, Fiberglas, and Aralac. In addition, several newer synthetics are being produced on a small commercial or semi-commercial scale or are in the development stage.

It is becoming apparent that many of these synthetic fibers will compete with one another and with natural fibers in certain fields and also that they will open up new applications for textiles.

WINN W. CHASE.

**THEATER.** The truism that the theater reflects the life and times of an era was certainly applicable to the theater during 1946. Not so much to the theater as an art, but to the theater as a business.

The same unrest, the same frenzied attempts to make profits in the face of rising costs, the same fears to take chances on anything but the most tried-and-found-true formulas were in evidence within the realm of the theater as they were in all phases of American life.

The instinct to be progressive or experimental has never been a strong one in New York's commercial theater. As the year progressed and uncertainty engulfed the nation and the world, many theatrical producers, unable to find "sure-fire hits" among the new manuscripts which came to their desks, turned to the libraries instead of the agents for their plays, and the revival trend which was started during the war years continued during this, the first year after the war.

**Revivals.** In all, twenty-two revivals were presented, including the five brought over from England by the Old Vic Company. Shakespeare was represented more times than any other playwright taken from the library shelves. In January the Theatre Guild presented his seldom produced *The*

*Winter's Tale*, the Old Vic Company brought over from London *Henry IV, Parts I and II*, in May, and during the early part of October the newly organized American Repertory Theatre did as its initial production *Henry VIII*.

Among the other classics to be presented during the year were John Webster's *The Duchess of Malfi*, with Elisabeth Bergner; a Bobby Clark version of Molière's *The Would-Be Gentleman*, starring Mr. Clark; the Old Vic's other contributions, Chekhov's *Uncle Vanya*, W. B. Yeats' translation of Sophocles' *Oedipus*, and Richard Brinsley Sheridan's *The Critic*; George Bernard Shaw's *Candida*, which Katharine Cornell revived to be presented alternately with her modern version of *Antigone*, and his *Androcles and the Lion* revived by the American Repertory Theatre.

Also offered were J. M. Synge's *The Playboy of the Western World* by the Theatre Incorporated, with Burgess Meredith as star, the American Repertory Theatre's *John Gabriel Borkman*, by Henrik Ibsen, James M. Barrie's *What Every Woman Knows*, and Rostand's *Cyrano de Bergerac*, Oscar Wilde's *Lady Windemere's Fan*, and a Negro production of *Lysistrata*.

The modern revivals included everything from an extremely handsome and lavish production of the Jerome Kern-Oscar Hammerstein 2d musical, *Show Boat* to the rowdy newspaper melodrama of 1928, *The Front Page*, by Charles MacArthur and Ben Hecht.

Not all these revivals made money for their producers. Elisabeth Bergner could not make a go of it with *The Duchess of Malfi*, even with Canada Lee putting on white face to be the first Negro actor in the American theater to play a white man. He enacted the role of the villainous Daniel De Bosola.

Bobby Clark had to close *The Would-Be Gentleman* after seventy-seven performances, while the youthful producers, Hunt Stromberg, Jr. and Thomas Spengler brought the run of *The Front Page* to an end after two months.

Though *Show Boat* was considered a success, due to the tremendous operating expenses and the high cost of its production, it will end its run of a year on January 5, 1947, with a deficit of \$130,000.

**Repertory.** New York has been without a repertory company since 1933, when Eva Le Gallienne closed the Civic Repertory Theatre on Fourteenth Street. This spring the famous Old Vic Company was brought over by the Theatre Incorporated for a limited engagement of six weeks, and a new generation of theater-goers was introduced to the operations of such a company.

In bringing over the troupe from London, the Theatre Incorporated had planned to lose money, but generously offered the Old Vic's managers half of any profit that might be made. The move, the expenses of which were assumed by Theatre Incorporated, was a costly one. The producing organization had \$25,000 of its own. Cornelius V. Whitney headed a small group of public-spirited citizens composed of Julius Fleischmann, Joseph Verner Reed, William S. Paley and Alfred G. Vanderbilt who put up \$75,000, and the combined sums were used for bringing the company from London by plane, for shipping the scenery, for paying for the dress rehearsals and for covering other numerous expenditures. The Theatre Incorporated agreed to repay the gentlemen from the earnings over and above the production and running expenses, and the committee agreed to share the losses in proportion to the amounts the members contributed if the losses were more than \$25,000, but their losses

were limited to \$75,000. Theatre Incorporated agreed that the organization would assume a deficit up to \$25,000.

The total gross receipts for the six-week engagement at the Century Theatre in New York, due to consistent sell-outs and standing room at all performances, were \$304,185.50. After all expenditures were paid, and Mr. Whitney and his committeemen had been returned their \$75,000, the profit on the engagement was \$30,641.67, which had the Theatre Incorporated and the Old Vic Company receiving \$15,320.84 each.

The overwhelming success of this famous old repertory company made Broadway pause and wonder. Was it due to the fact that the company was headed by two favorites in America, Laurence Olivier and Ralph Richardson? Could it be that the theater-going public was taken in by the deluge of advance publicity, or does America really want to see the classics revived under the repertory system?

The questions will shortly be answered, for New York again has a repertory company of its own, The American Repertory Theatre, headed by Eva Le Gallienne, Margaret Webster and Cheryl Crawford. They have raised \$300,000 and have leased the International Theatre on Columbus Circle, for two years. The ART's season, which began in November, calls for six plays. By the end of 1946 *Henry VIII*, Sir James Barrie's *What Every Woman Knows*, Henrik Ibsen's *John Gabriel Borkman* and Shaw's *Androcles and the Lion* had been presented. Before the first season is completed they will have added to their repertoire Sheridan's *School for Scandal* and a new play.

Miss Crawford is the Managing Director of the company and Miss Le Gallienne and Miss Webster divide the directing chores and act. Included in the company are Victor Jory, Walter Hampden, June Duprez, Ernest Truex, Richard Waring, and Philip Bourneuf. The scenery and costumes are designed by David Ffolkes and Paul Morrison. Lehman Engel is in charge of the music, and Felicia Sorel stages whatever dances have to be done.

Everyone in the company is under contract for two years and is paid on the basis of a forty-week period. After a season in New York the American Repertory Theatre goes on the road, playing all the major cities in America.

**Theater Shortage.** The housing for plays and musicals in New York became as acute as the housing for people. Many factors enter into the situation to make it a baffling one, and like the civilian housing shortage, everybody talked about it, but nothing was done about it.

The only constructive thing that could be done was to build some more theaters, but no one was doing that. Instead, theater owners were renting their theaters to radio stations and motion picture companies, who offered lucrative rental fees, leaving the poor play producers with plays to produce, but no place to produce them.

Add to the headaches the continuation of the "stop clause," that came into being during the war years. The "stop clause," which was in every contract signed by the producers with the theater owners, set a definite sum that a play or musical had to gross. If it ever fell below the amount stated, the show would have to close or seek another house. It always closed, of course, for there were never other houses to seek.

Many times producers, stymied on the road during pre-Broadway tours, would bring plays into New York when unexpected vacancies occurred, knowing that the theaters were already booked by

other plays. They gambled on being able to secure other theaters when moving time came.

The Theatre Guild did that with its production of *The Winter's Tale*. Fortunately the Shakespeare revival had been touring successfully for seventeen weeks and the production costs had been paid back, for when Katharine Cornell was ready to open *Antigone* at the theater, previously booked, in which *The Winter's Tale* was playing, the play had no place to go and was forced to close.

José Ferrer almost had a similar fate with his production of *Cyrano de Bergerac*. He had engaged the Alvin, which had already been leased by the Playwrights' Company for *Joan of Lorraine*, starring Ingrid Bergman, for an opening a month after *Cyrano's* première. Had Mr. Ferrer been forced to close, he would have lost \$100,000, but luckily for him, Elisabeth Bergner closed her revival of *The Duchess of Malfi* at the Barrymore in time for the actor-manager to obtain that theater.

Another factor which made the situation difficult was the development of long runs. Producers became more cautious and unless they were fairly certain of meeting criticism and audience approval at once, they would not open their productions. More and more shows closed on their try-out tours, and only those managers who felt they had sure successes on their hands would open in New York. A hit, of course, was able to meet its "stop clause" and stayed in its theater. That was fine for the hit and the theater, but was not easing the theater shortage. At one time during the year twenty-three new productions were held out of town awaiting theater vacancies.

Tied in with the theater-shortage was the mounting production cost. One-set shows were costing producers between \$50,000 and \$60,000, and musicals, which required several sets and extensive costuming, from \$100,000 to \$300,000. Both the revival of *Show Boat* and the production of the Ethel Merman vehicle, *Annie Get Your Gun*, were in the \$300,000 class. It is reported that *Annie* will have to play for a year before production costs are earned and the musical comedy can begin making a profit.

No longer can a manager bring in a show, nurse it along with the hope that it will eventually find its audience. The theater shortage, the "stop clause," and the high production costs have seen to that.

**Producers Rebel.** On Wednesday night, February 27, 1946, the critics went to the opening of Maxwell Anderson's *Truckline Cafe* at the Belasco Theatre, little thinking that the reviews they wrote that night to appear in the press the next day would cause a furor. They had not liked the play and had said so. Harold Clurman and Elia Kazan, coproducers of the play with the Playwrights' Company, of which Mr. Anderson is a member, did not like what the critics had written and replied boldly and bitterly in large advertisements, which appeared in several of the daily newspapers. The advertisements were large ones, giving plenty of space for the two men to accuse many of the gentlemen of the press of being incapable of doing the job assigned them and to claim that had the reviewers not been so vehement in their disapproval, the play might have found its audience. As it was, they were of the opinion that the drama critics not only had driven the wolf to the Belasco's stage door, they had seen to it that he was firmly entrenched inside of it, and the play was being forced to close without a proper hearing.

As the critical fraternity was recovering from this verbal double-punch, playwright Anderson picked up the cry in another advertisement, pub-

lished two days later, saying among other things that the writers of drama criticism were "the Jukes of Journalism."

Temper was high, talk was strong, and interest was great in the conflict. Many people in the theater, burdened down by the many problems confronting the institution today, felt that the complaint was not without some justification. They only wished that the play had been worthy of the stir it had created.

Later, during the middle of May, John Clein opened at the Booth Theatre with *Swan Song*, which was authored by Ben Hecht and Charles MacArthur and reportedly financed by them to a great extent. It, too, received unanimous disapproval from the critics. The Messrs. Hecht and MacArthur were angered by the comments, but, instead of making their rebuttal in the form of paid advertising, they wrote a curtain speech berating the reviewers and asking the audiences, if they liked the show, to tell their friends.

The last chastising received by the drama critics was administered by the producer, director, adaptor and main actor of the last production of the 1945-46 theatrical season—Orson Welles. The production concerned was a musical version of Jules Verne's *Around the World in Eighty Days*, which arrived at the Adelphi Theatre on the 31st day of May. It was a gigantic, expensive affair, with music by Cole Porter, entailing two acts and thirty-four scenes and the use of fifty-six stage hands. John Chapman, of the New York *Daily News*, was the only daily reviewer to write a favorable notice, and Mr. Welles expressed his indignation vocally over the radio and in public whenever possible. Though his scorn rallied a great number of his fans to the box-office, not enough came to offset the huge operating expense of the extravaganza, and the show was forced to close at the end of seventy-four performances.

The last act of the critics to bring disfavor from several corners of the Broadway area was the inability of the Drama Critics' Circle to agree on the best play of the season so that it could make its annual award. The Pulitzer Prize Committee made its yearly play award to the Howard Lindsay-Russell Crouse Comedy, *State of the Union*, starring Ralph Bellamy and Ruth Hussey, but no award came from the Drama Critics' Circle.

Recently the Drama Critics' Circle altered its by-laws so that a prize must be granted at the end of each season, and the beginnings of peace are in sight. At least, within the Circle's own ranks, for John Chapman, George Jean Nathan and Robert Garland, who withdrew from the organization because of disagreement with its policy, have returned to the fold.

**O'Neill Returns.** No theatrical event of the year was more anticipated nor more eagerly awaited than the Theatre Guild's production of Eugene O'Neill's *The Iceman Cometh*. It had been twelve years since America's foremost playwright had been represented on Broadway. Utmost secrecy had surrounded the production. Practically no manuscripts had been in circulation previous to the readings for parts or rehearsals. Rehearsals had been held behind closed doors and few interviews had been granted by the playwright or by anyone connected with the play before its opening. Yet, word had crept out, enough to tease theater-goers, and the Theatre Guild had advertised the play far enough in advance of the première to have long queues at the box-office and a good advance sale before the curtain rose on a drama that was to have four acts and was to play four and a quarter hours.

The Theatre Guild tried to break the running time by bringing up the curtain at 5:30 p.m., play the first act and then grant an hour and fifteen minutes dinner intermission before resuming the other three acts. The plan was not too successful because of crowded restaurant conditions, and so it was abandoned in favor of a 7:30 curtain and regular ten minute intermission between the acts.

No matter what the arrangements were, nor how great the respect of the theater-goers for the dramatist or the drama, four and a quarter hours made fairly long sitting in the theater.

Whatever else Mr. O'Neill was saying in *The Iceman Cometh*, it was generally agreed that his play preached the doctrine that man cannot live without illusions.

To illustrate his theme, he assembled in a Bowery type bar an assortment of characters that ranged from prostitutes to a disillusioned anarchist, who were all living under the illusion that they were going to stop drinking in the near future and resume the respectable stations in life they once held.

Into the saloon comes Hickey for his anticipated annual party. At this party he generally got as drunk as the rest of them, and the pleasant aspects of the party were that the drinks were on him and that the party only stopped when there was nothing more to drink.

When this character appears, however, the habitués of the bar find him a changed man. He has faced life and has found peace. He urges them to do the same. He berates them into sobering up, and makes them attempt to do the things they are always talking about doing. No happiness comes out of it for them. Their peace comes only when they are in their cups, living with their dreams.

The year was 1912, so that Robert Edmond Jones was able to capture a good deal of atmosphere in his sets and costumes. Eddie Dowling directed the piece and a capable cast which included Dudley Digges, James Barton, Carl Benton Reid, Nicholas Joy, and James Cagney's young sister, Jeanne. Mr. Barton met a challenge seldom offered many actors, that of reading one speech for fifteen minutes without stopping.

For awhile it was thought that another O'Neill play would be presented in 1946, *A Moon for the Misbegotten*, but production was postponed from December to an indefinite time in 1947. Secrecy surrounds this play as it did *The Iceman Cometh*. The reason for its postponement has not been given. There is speculation that the playwright's poor health might prevent him from constant attendance at rehearsals, or that he is at work trying to complete his cycle of eleven plays, to be entitled *A Tale of Possessors Self-Dispossessed*, of which seven are finished.

Already completed and awaiting production are the above mentioned *A Moon for the Misbegotten*, *A Touch of the Poet*, and *Long Journey into Night*, which may not be produced until twenty-five years after the playwright's death.

**Other Plays.** What looked like a trend in social plays was started last year with *Deep Are the Roots*, *Home of the Brave*, and *Strange Fruit*, and was continued into 1946 with Robert Ardrey's *Jeb*, *This, Too, Shall Pass*, *Walk Hard*, and Maxine Wood's *On Whitman Avenue*.

The trend only began, however, for the plays, for the most part, were met with critical disapproval and audience indifference. It died before it really got started. Only *On Whitman Avenue* had the courage to rise above its critical abuse and it achieved a run of 137 performances.

*Born Yesterday*, a comedy with social overtones became one of the outstanding hits of the year because its playwright, Carson Kanin, saw to it that the play made the audience laugh first and think afterwards. The comedy served to introduce Paul Douglas from radio to the theater, and to bring Judy Holliday to the front as an important comedienne.

The first serious work to be a success was Arthur Hopkins' production of Emmet Lavery's humanized story of the late Justice Holmes, *The Magnificent Yankee*, with Louis Calhern playing Justice Holmes and Dorothy Gish as his wife, Fanny Dixwell Holmes. Katharine Cornell starred in Jean Anouilh's version of *Antigone*, adapted by Lewis Galantieri, which the actress-manager had seen in Paris at the close of the war. The play, which slyly has its say against Fascism, had been presented in France during the occupation. Its success there was not matched here, and it closed after 64 performances.

Ingrid Bergman caused a justifiable stampede at the box-office of the Alvin before and after her opening in November in Maxwell Anderson's dramatic version of the Joan of Arc story, *Joan of Lorraine*, and it looks as though she can play to filled houses as long as she wants to, or her film commitments will permit her.

Another serious work to meet with critical and audience approval was Lillian Hellman's *Another Part of the Forest*, which is the background story of the characters in another Hellman success, *The Little Foxes*.

Jean-Paul Sartre's *No Exit*, successfully produced in London and in Paris before coming to New York, was a four-character play by this leading exponent of the Existentialism philosophy, telling of three people in Hell.

Comedy was represented by Alfred Lunt and Lynn Fontanne, who opened in January in *O Mistress Mine*, *Love in Idleness* retitled. Mr. and Mrs. Lunt appeared in the Terence Rattigan play in London during the war and toured the GI circuit in Wales, France and Germany before bringing it to New York. In December they played their 301st New York performance in the comedy, thereby achieving their longest run in any play in New York in which they have appeared together.

Ina Claire returned to the theater after an absence of five years to star in George Kelly's comedy, *The Fatal Weakness*. Helen Hayes broke loose from regal roles to play a tipsy spinster librarian sipping "pink ladies" in a Newark bar in Anita Loos' *Happy Birthday*, and Fredric March and his wife, Florence Eldridge, co-starred in Ruth Gordon's sentimental and nostalgic autobiographical comedy, *Years Ago*.

Musically the two outstanding successes were Ethel Merman playing Annie Oakley in *Annie Get Your Gun*, and the ex-GI revue, *Call Me Mister*, both having played to capacity business since their openings. Ray Bolger opened in the spring in a revue, *Three to Make Ready*, which, though not accorded complete critical acclaim, has managed to gross \$1,250,000. Compared to the \$1,501,500 of *Annie* and the \$1,460,413 of *Mister*, it still can consider itself in the upper brackets.

The old favorites manage to remain on the boards with tenacity. *Life With Father* went into its eighth year and ended 1946 by playing its 2,995th performance. It promises to continue at least until June 14, 1947, when it will pass the record held by *Tobacco Road* as Broadway's longest run play. Then it will give its 3,183rd performance.

*Oklahoma!*, since its opening in March, 1943

has played 1,590 times, having grossed \$6,201,114 in New York and \$5,742,756 by the National Company now on tour. The other Theatre Guild musical success, *Carousel*, has taken into the box-office, since its première at the Majestic in April, 1945, \$4,388,212.

*The Voice of the Turtle* had its third birthday and *Harvey*, its second and both comedies are still playing to capacity houses. *The Voice*, is represented on the road by two touring companies and *Harvey* has its counterpart in Chicago headed by Joe E. Brown.

The summer, being the first without the war, found approximately 102 summer theaters open. There were too many of them for all the companies to make money, but most of them managed to remain running until the end of the season on Labor Day. Only four plays, which had summer theater productions, were presented in New York before the end of the year. John Golden brought *Made in Heaven!* into Henry Miller's Theatre after it had been tried out at the Westport Country Theatre, Westport, Conn., and Theron Bamberger and Richard Skinner presented Harry Segall's *Wonderful Journey*, which was *Heaven Can Wait* when it was done at the Bucks County Playhouse, New Hope, Pennsylvania, and *Here Comes Mr. Jordan* when it was done as a motion picture in 1939. Mr. Segall's play was written for the theater, but was first made into a film before it finally ended where the playwright first intended the fantasy to be performed; Jean Dalrymple presented a revival of the George Manker Watters-Arthur Hopkins comedy, *Burlesque*, co-starring Bert Lahr and Jean Parker; Barnard Straus and Roland Haas produced *Temper the Wind*, which had been done at the Woodstock, New York, summer theater under the title of *Drums of Peace*.

VERNON RICE.

**TIBET.** A dependency of China in central Asia. Area, 463,200 square miles; population variously estimated at from 700,000 to 6,000,000. Capital, Lhasa, 50,000 inhabitants. Lamaism, a development of Mahayana Buddhism, is the religion of the people. Chief occupations: agriculture, stock raising, wool spinning, and knitting. The principal minerals are gold, borax, and salt. There is a factory for the manufacture of army equipment, uniforms, coins, and paper money. Trade is carried on with China and India.

Civil and religious authority is vested in the Dalai Lama, acting through a Prime Minister appointed from among the principal Tibetan lamas. The latter is assisted by a grand council of four members. The 14th Dalai Lama is a Chinese peasant boy selected in 1939 as the reincarnation of the 13th Dalai Lama who died in 1933. Enthroned Feb. 22, 1940, he took the name of Jampel Ngawang Lobsang Yishey Tenzing Gyatso. During his minority, supreme power remains in the hands of the regent who assumed control when the 13th Dalai Lama died.

**TIN.** Tin mining, in areas of the Far East liberated from the Japanese, which in the prewar period produced 70 percent of the world's supply, was able to resume on only a limited scale in 1946. As a result, world supply was far short of consumer demand, and was severely rationed in all consuming countries.

It was estimated that Far Eastern production would amount to from 24,000 to 30,000 tons in 1946, compared with an average prewar annual production of 160,000 tons. Poor condition of the

mines following the Japanese retreat, lack of equipment, political unrest, and inadequate food supplies contributed to the delay in returning to full production. Tin stocks, in the form of pig tin, concentrates, and solder recovered from the Japanese were about 41,000 tons. It was estimated that 1947 production from the Far East would be at only about 50 percent of the prewar rate, and that full scale production would not be reached until 1948 or 1949. Total world production for the year was only slightly higher than in 1945.

Secondary tin recovery from scrap in the United States helped fill this country's needs, totaling about 2,400 tons as metal and 21,300 tons tin content in the form of solder, alloys, and chemical compounds. United States consumption of new and secondary tin in 1946 was about 81,000 tons.

World consumption of new tin during 1946 was at the rate of approximately 115,000 tons annually. The difference between Far Eastern production and this consumption rate was made up by production from other areas (See Table) and by continued withdrawals from prewar stocks, which had been carefully doled out since the start of the Japanese war. Allocations of world tin production

ESTIMATED WORLD TIN PRODUCTION  
(In Tons)

	1946	1947
Bolivia . . . . .	38,000	38,000
Belgian Congo . . . . .	14,000	14,000
Nigeria . . . . .	12,000	12,000
Malaya . . . . .	15,000	41,000

Source: *The Iron Age*

were made to most consuming nations by the Combined Tin Committee, whose membership comprised most of the important consuming countries. For the first nine months, imports into the United States comprised about 32,000 tons of tin in ore, later smelted at Texas City, Texas, and 6,566 tons of metal. In general, the greater portion of the ore came from Bolivia, with a small amount of high grade ore from the Netherlands East Indies. Great Britain drew from Bolivia, Nigeria, and Belgian Congo. As a result of careful husbanding of stocks during the war it was estimated that Britain and the United States still held between them, late in 1946, stocks in excess of 100,000 tons, consisting of approximately 60,000 tons in pig tin and 40,000 tons in ore and concentrates.

Prices paid producers varied widely throughout the world, ranging from 76 cents per pound in South Africa to 54 cents per pound in Malaya. Procurement, distribution, and sales in Great Britain and the United States were conducted by the respective governments. Sales to domestic consumers were on the basis of 54 cents per pound in Great Britain and 52 cents per pound in the United States. The United States government sales price was raised in November to 69.5 cents per lb., more closely representing the cost to the government.

Uses of tin were strictly regulated. Tin plate (principally for canning) required the largest amount of tin, with brass and bronze solder, bear-

ings and other industrial uses taking most of the remainder. Use of tin in toys, ornaments, and other non-essential products was prohibited.

CHARLES T. POST.

**TOGO, French.** The part of Togo mandated to France by the League of Nations. Area, 21,893 square miles. Population (1938), 780,497. Capital: Lomé (14,380 inhabitants). The main products are cocoa, palm oil, copra, coffee, and cotton. Trade (1939): imports 91,644,000 francs; exports 74,227,000 francs (franc averaged \$0.0251 in 1939). Budget (1939): 50,534,000 francs; in addition, the railway budget was 12,889,000 francs. Railways (1940): 242 miles. Shipping (1938): 386 ships cleared the ports of Lomé and Aneho.

**TOGOLAND.** The part of Togo under British mandate from the League of Nations, attached to the Gold Coast, British West Africa, for administrative purposes. Area, 13,041 square miles. Population (1940 estimate), 391,473. The Governor of the Gold Coast serves as administrator of the British area. In 1946 the territory was recommended by Great Britain for United Nations trusteeship and accepted. The chief exports are palm oil, palm kernels, cocoa, kola nuts, and coffee. Cotton textiles are imported in quantity. Trade, finance and education figures are combined with those of the Gold Coast. See also TOGO, FRENCH.

**TOKELAU (Union Islands).** A group of islands (Fakaofu, Nukunono, Atafu) in the Pacific (8° to 10° S. and 171° to 173° W.), formerly part of the Gilbert and Ellice Islands colony, transferred to the jurisdiction of New Zealand on February 11, 1926. Area: 4 square miles. Estimated population (June, 1942), 1,364. The Government was under supervision of the administrator of Western Samoa.

**TOKYO WAR CRIMES TRIALS.** The International War Crimes Trials in Tokyo developed out of an exchange of communications and representations between the Supreme Commander for the Allied Powers and the Executive, State, War, Navy, Justice, and other appropriate departments of the United States Government, and from an exchange of views between governments signatory to the Instrument of the Japanese surrender. This was consequent to the Potsdam Declaration, which announced, in Article 10: "We do not intend that the Japanese shall be enslaved as a race or destroyed as a nation, but stern justice shall be meted out to all war criminals . . ."

These terms were upheld in similar wording in the Instrument of Surrender, signed by the authorized representatives of the Japanese Emperor and the Japanese Government.

On November 29, 1945, the President of the United States, " . . . to enable Joseph B. Keenan, as Chief of Counsel in the preparation and prosecution of charges of war crimes against the major leaders of Japan and their principal agents and accessories . . ." empowered the Chief of Counsel with authority to select and recommend to the President any personnel, appropriations, or expenditures, from the various government departments, establishments, or agencies, including the various branches of the armed services, which might be deemed necessary to the completion of his duties and functions, and to cooperate with and receive the assistance of any foreign government to the extent deemed necessary for the successful accomplishment of his mission.

On December 8, the Supreme Commander for

the Allied Powers established the International Prosecution Section and designated Joseph B. Keenan as Chief of Counsel and of the Section.

**The Charter.** International courts for the trial of national leaders as major war criminals had never been set up after any war in the past. In order to establish a court before which to try the Japanese leaders to be accused, it was necessary to draw up a constitution.

The Charter was completed and established by the Supreme Commander for the Allied Powers on January 19, 1946.

The Charter designated an International Military Tribunal "for the just and prompt trial of the major war criminals of the Far East." Not less than five nor more than nine members were to constitute the Tribunal. These were to be appointed by the Supreme Commander for the Allied Powers from nominations submitted by the governments which were signatory to the Instrument of Surrender.

The definition of national leaders as war criminals was set forth in this Charter as follows:

*"Article 6 Responsibility of Accused* Neither the official position at any time of the accused, nor the fact that the accused acted pursuant to order of his government or of any superior shall, of itself, be sufficient to free such accused from responsibility for any crime with which he is charged, but such circumstances may be considered in mitigation of punishment if the Tribunal determines that justice so requires."

**Establishment of the Tribunal.** The membership of the Tribunal was set forth in the Charter to conform with the number of United Nations who were signatory to the Instrument of Surrender—Great Britain, France, Russia, China, Australia, New Zealand, Canada, Netherlands, and the United States. However, the peoples of India and of the Philippines had felt Japanese aggression over a prolonged period of time. An increase in the membership of the Tribunal to a maximum of eleven was therefore suggested, ratified by the Far Eastern Commission, and established on April 26, 1946, by the Supreme Commander for the Allied Powers.

Representatives on the Tribunal, and also Associate Prosecutors from the eleven nations, arrived in Tokyo and were appointed to their positions as follows:

Mr Joseph B. Keenan, as Chief of Counsel from the United States, Chief of the Prosecution Section, Mr Arthur S. Comyns-Carr, as associate prosecutor from the United Kingdom, the Honorable Sir William Flood Webb, the Chief Justice of the Supreme Court of Queensland, as member of the Tribunal from the Commonwealth of Australia, the Honorable Mr. Justice Erima Harvey Northcroft, Judge of the Supreme Court of New Zealand, as member of the Tribunal, Mr Justice Alan James Mansfield, as associate prosecutor from the Commonwealth of Australia, Brigadier Roland Henry Quilliam as associate prosecutor from the Dominion of New Zealand, Brigadier Henry Gration Nolan, as associate prosecutor from the Dominion of Canada; the Honorable Mr Justice F. Stuart MacDougall, as member of the Tribunal from the Dominion of Canada; the Honorable Mr Justice Bernard Victor C. Roling, Judge of the Utrecht Court, as member of the Tribunal from the Kingdom of the Netherlands, the Honorable Mr. Justice John P. Higgins, of the Massachusetts Supreme Court, as member of the Tribunal from the United States; Lord Patrick, as member of the Tribunal from the United Kingdom; Mr Justice W. G. F. Borgerhoff-Mulder, Justice of the Special Court of War Criminals, the Hague, as associate prosecutor for the Kingdom of the Netherlands; the Honorable Mr. Justice Mei Ju-Ao, Chairman, Foreign Affairs Committee, Yuan Province, as member of the Tribunal from China; Judge Hsiang Che Chun, as associate prosecutor from China, the Honorable Justice Henri Bernard, Advocate General Premier Classe, as member of the Tribunal from France, Mr. Robert Oneto as associate prosecutor from France, Mr. Pedro Lopez as associate prosecutor from the Philippines; General I. M. Zaryanov, Major General of Justice, as member of the Tribunal from the Union of Soviet Socialist Republics; Minister S. A. Golunsky, Director of Judicial Science, as associate prosecutor from the Union of Soviet Socialist Republics; Mr.

Govinda Menon, as associate prosecutor from India; the Honorable Mr. Justice B. M. Pal, former Judge of the Calcutta High Court, as member of the Tribunal from India; the Honorable Mr. Justice Jaranilla, member of the Supreme Court of the Philippines, as member of the Tribunal; Sir William Webb was designated by the Supreme Commander for the Allied Powers as President of the International Military Tribunal for the Far East.

**The Courtroom.** After a number of buildings had been inspected to determine a suitable site for the trials, the War Ministry Building was selected in January, 1946. By March, the courtroom inside this building was all but completed. The headphones were built so that the listener could hear what was said in English and translated into Japanese—or vice versa—over one channel, and, by moving a small switch, could hear the same discourse entirely in his own language through a separate channel. The glassed-in booth behind the distinguished visitors' box was subdivided into sections; in each section sat one or more translators interpreting in languages other than Japanese and English at the same time of such discourse or as rapidly following it as possible. Thus, an address, while being delivered in Russian from the speakers' platform, could be simultaneously translated into English, Japanese, Chinese, French, or other language as might be required.

**Development of the Prosecution's Case.** In order to determine those to be accused and prepare an indictment against them, it was first necessary to determine the logical beginning and logical extent of the prosecution's case. It was immediately apparent from the already known and early discovered facts that plans and actions of Japanese military, diplomatic, and political leaders against peoples of other nations of the Far East, particularly those peoples of the Republic of China, could not go unexplored, especially since all of them seemed ultimately to lead into Pearl Harbor and the war against the United States. There seemed no logical place to start short of the Manchurian Incident of September, 1931—so long considered as the real beginning of World War II.

Because of its scope, the case was divided into eleven different phases.

**The Indictment.** From December 1945 to April 1946 the preparation of a carefully worded indictment went forward during constant meetings of the associate prosecutors. During this time suspects were selected to be accused. On April 29 the indictment, signed by each of the eleven associate prosecutors, and directed against 28 accused, was lodged with the Tribunal in both English and Japanese. The accused were arraigned May 3 and on that date the indictment was read. It consists of an introductory summary, 55 separate counts, and appendices in the nature of Bills of Particulars. It lists the defendants and gives their official biographies and affiliations. At the time of the arraignment all of the accused were present and all were represented by counsel. All entered pleas of not guilty. The Defense Counsel requested a continuance until June 3. The Tribunal granted this.

On June 3, the Tribunal reconvened and continued its session until June 4, on which date the Opening Address was read by the Chief of the International Prosecution Section. This statement reiterated the main points of the indictment. A further application for continuance, made by the Defense Counsel, was granted until June 13. Later, on July 15, court was adjourned for necessary repairs and installations in the courtroom. On July 22, Justice Higgins, United States member of the Tribunal, resigned to resume his duties on the Supreme Court of Massachusetts. Major General

Myron C. Cramer, former Judge Advocate General of the United States Army, relieved Justice Higgins as the United States member on the Tribunal.

**The Defense.** In order to assure a fair trial, prominent members of the American Bar, as well as legal officers of the United States military services, were made available to the defendants. This personnel augmented the Japanese counsel chosen by the defendants. All counsel were approved by the Supreme Commander for the Allied Powers. The American counsel provided the defendants with an understanding of the case and their position, clarified points of law and questions concerning trial procedure, and in other ways assisted the defense. Captain Beverly M. Coleman, USN, was originally appointed Chief of Defense Counsel. He led the defense through the opening arguments and issues of the trial and subsequently resigned and assumed duties elsewhere.

The Defense moved to dismiss the trials on the grounds of a prejudiced court, with some of the members of the Tribunal having had previous experience in the investigation or trial of Japanese in other areas; that there was no precedent for such a Tribunal or for the holding of trials of such nature; and that the defendants were being tried before the crimes with which they were charged had been established as legal crimes in any comparable law. The Defense also argued that inasmuch as certain evidence submitted indicated that many more than the originally indicted 28 defendants might be involved under the classifications of crimes as set forth in the Indictment, it was contrary to justice to hold responsible only the 28 accused.

Since the inception of the trials in Tokyo, expert opinion has differed on their advisability and even on the methods used. In addition to arguments on points of law submitted by the defense, any general dissatisfaction with such trials may be said to fall into two main groups.

Extreme opinion in the one group is that such trials are only a camouflaged version of imposing the will of the conqueror upon that of the vanquished—of making the loser pay. The extreme argument in the other group is that the most expeditious and least expensive way to have handled such criminals would have been to invoke capital punishment at the outset without any recourse to judicial procedure. The scope and the characteristics of the Tokyo trials—including the number and cultural differences of the nationalities involved, the geographic area, population, and history covered, the problems of language and interpretation, and the difficulties in finding witnesses and documents—have offered opportunity for testing the application of international law to major war criminals in an extensive sense.

Those who answer the criticisms advanced against the trials point out that the world has experienced two great wars within the last 25 years, the latter more enveloping than the former, and that the repercussions of both wars might not have been felt with increasing violence and completeness among the people in separate countries if those countries themselves had not advanced into a state of greater interdependence during the same period of time. It is further argued that the second was much more far-reaching than the first. It was called by leaders of nations, "total war." Into it were drawn more military personnel than ever before engaged in war. In addition, people themselves, in every walk of life and of every age, were subjected to the direct acts of warfare. War actu-

ally proved itself to be no respecter of persons. On the basis of these arguments, it is concluded that where human life is involved, the strongest measures of justice, invoked speedily, are called for.

**The Charges.** The Indictment, as outlined in the Opening Address:

"The indictment consists of an introductory summary, the counts charging war crimes, and appendices which are in the nature of Bills of Particulars. The offenses charged are in three groups, namely: Group One, Crimes against Peace; Group Two, Murder; and Group Three, Conventional War Crimes and Crimes against Humanity.

"In Group One, Crimes against Peace as defined in the Charter are charged in thirty-six counts. In the first five counts the accused are charged with conspiracy to secure the military, naval, political, and economic domination of certain areas, by the waging of declared or undeclared war or wars of aggression and of war or wars in violation of international law, treaties, agreements, and assurances. Count 1 charges that the conspiracy was to secure domination of East Asia and of the Pacific and Indian Oceans; Count 2, domination of Manchuria; Count 3, domination of all China; Count 4, domination of the same areas named in Count 1, by waging illegal wars against sixteen specified countries and peoples. (Note: The countries include the United States of America, the British Commonwealth of Nations [which expression wherever used in this indictment includes the United Kingdom of Great Britain and Northern Ireland, the Commonwealth of Australia, Canada, New Zealand, South Africa, India, Burma, the Malay States, and all other parts of the British Empire not separately represented in the League of Nations], the Republic of France, the Kingdom of the Netherlands, the Republic of China, the Republic of Portugal, the Kingdom of Thailand, the Commonwealth of the Philippines, and the Union of Soviet Socialist Republics, or such of them as might oppose that purpose.)

"In Count 5 the accused are charged with conspiring with Germany and Italy to secure the domination of the world by waging of such illegal wars against any opposing countries. The prosecution charges in the next twelve counts (6 to 17) that all or certain accused *planned and prepared* such illegal wars against twelve nations or peoples, identifying in a separate count each nation or people attacked pursuant thereto. In the next nine counts (18 to 26) it is charged that all or certain accused *initiated* such illegal wars against eight nations or peoples, identifying in a separate count each nation or people so attacked. In the next ten counts (27 to 36) it is charged that the accused *waged* such illegal wars against nine nations or peoples, identifying in a separate count each nation or people so warred upon.

"In Group Two, murder or conspiracy to murder is charged in sixteen counts (37 to 52). It is charged in Count 37, that certain accused conspired unlawfully to kill and murder people of the United States, the Philippines, the British Commonwealth, the Netherlands, Thailand (Siam), by ordering, causing and permitting Japanese armed forces, *in time of peace*, to attack those people in violation of Hague Convention III, and in Count 38, in violation of numerous treaties other than Hague Convention III.

"It is charged in the next five counts (39 to 43) that the accused unlawfully killed and murdered the persons indicated in Counts 37 and 38 by ordering, causing and permitting, *in time of peace*,

armed attacks by Japanese armed forces, on December 7 and 8, 1941, at Pearl Harbor, Kota Bahru, Hong Kong, Shanghai, and Davao. The accused are charged in the next count (44) with conspiracy to procure and permit the murder of prisoners of war, civilians and crews of torpedoed ships.

"The charges in the last eight counts (45 to 52) of this group, are that the accused, by ordering, causing and permitting Japanese armed forces unlawfully to attack certain cities in China (Counts 45 to 50) and territory in Mongolia and of the Union of Soviet Socialist Republics (Counts 51 and 52), unlawfully killed and murdered large numbers of soldiers and civilians.

"In Group Three, the final group of counts (53 to 55), other Conventional War Crimes and Crimes against Humanity are charged. Certain specified accused are charged in Count 53 with having conspired to order, authorize and permit Japanese commanders, War Ministry officials, police and subordinates, to violate treaties and other laws by committing atrocities and other crimes against many thousands of prisoners of war and civilians belonging to the United States, the British Commonwealth, France, the Netherlands, the Philippines, China, Portugal, and the Union of Soviet Socialist Republics.

"Certain specified accused are directly charged in Count 54, with having ordered, authorized, and permitted the persons mentioned in Count 53 to commit offenses mentioned in that count. The same specified accused are charged in the final count (55) with having violated the laws of war by deliberately and recklessly disregarding their legal duty to take adequate steps to secure the observance of conventions, assurances, and the laws of war, for the protection of prisoners of war and civilians of the nations and peoples named in Count 53.

"Summarized particulars in support of the counts in Group One are presented in Appendix A. Dates, places and other details are stated for instances of military aggression, beginning in Manchuria and expanding into many other areas and periods. In Appendix B are collected articles of treaties violated by Japan, as charged in the counts for Crimes against Peace and the crime of murder. In Appendix C are listed official assurances violated by Japan and incorporated in Group One, Crimes against Peace. Conventions and assurances concerning the laws and customs of war are discussed in Appendix D, and particulars of the breeches of the laws and customs of war for which the accused are responsible are set forth therein. Individual responsibility for crimes set out in the indictment and official positions of responsibility held by each of the accused during the period with which the indictment is concerned are presented in Appendix E."

Among the 28 accused, each named on several of the above counts, were the following: Sadao Araki, Kenji Dohihara, Kingoro Hashimoto, Shunroku Hata, Kiichiro Hiranuma, Koki Hirota, Naoki Hoshino, Seishiro Itagaki, Okinori Kaya, Koichi Kido, Hyotaro Kimura, Kuniaki Koiso, Iwane Matsui, Yosuke Matsuoka, Jiro Minami, Akira Muto, Osami Nagano, Takasumi Oka, Shumei Okawa, Hiroshi Oshima, Kenryo Sato, Mamoru Shigemitsu, Shigetaro Shimada, Toshio Shiratori, Teiichi Suzuki, Shigenori Togo, Hideki Tojo, Yoshijiro Umetzu.

ROBERT L. GUILL.

**TRACK AND FIELD ATHLETICS.** The return of many stars from the service helped track and field along

the comeback trail last year and the sport, which had dipped to an all-time low the previous campaign, was well on its way to complete recovery before 1946 drew to a close.

The mile run, big glamour event of yesteryear, lost much of its lustre and Leslie MacMitchell, back in competition after a three-year stretch in the Navy, dominated his rivals, although his best effort was a 4:12.3 race.

MacMitchell won eight consecutive tests during the indoor season, including the title mile in the colorful national A.A.U. championships held in Madison Square Garden. The visit to this country of Marcel Hansenne—one of Europe's top runners and certainly the best France has developed in many years—added considerable appeal to the campaign. Although the invader was unaccustomed to our board tracks and failed to win a major race, he showed steady improvement in his short stay here and left the impression that he will be a strong contender in the 1948 Olympics.

Hansenne finished third behind MacMitchell and Tommy Quinn, the New York A.C. veteran, in the Millrose A.A. and Boston A.A. games and fourth to MacMitchell, Quinn, and Forest Efav in the New York A.C. meet. However, in his last appearance in this country, Hansenne thrilled 15,000 fans gathered for the Knights of Columbus show by pressing MacMitchell all the way. The Bronx Express had to run his best race of the season to beat the Frenchman and Quinn by a scant three yards.

Although MacMitchell unquestionably proved himself the mile king of the country, Fred Sickinger of Manhattan College, who had served with the Fifth Army, generally was considered the top performer of the season on the boards. Sickinger, winner of seven straight races after losing in a 600 to Maurice Callender at the outset of the campaign, took four races at 1,000 yards, two at 880 and one at 600. He holds the Intercollegiate A.A.A.A. 600, metropolitan 1,000 and national 1,000 championships.

The New York A.C., which also retained its outdoor crown, led a strong field for team laurels in the national A.A.U. games that climaxed the indoor drive. Joe Megysey, walking ace; Henry Dreyer, perennial weight-throwing king; and John Vislocky scored firsts for the Winged Foot squad. Ed Dugger, hurdling veteran from the Dayton A.C., registered the only double of the meet, skimming over the low and high barriers to two titles.

Herb McKenley, 21-year-old British subject from Jamaica who ran for the University of Illinois, and Bob Fitch, Minnesota star, accounted for two of the major records that fell during the year. McKenley, best quarter-miler to appear in many moons, was clocked in 0:46.2 in the Western Conference 440 to erase the standard established by Ben Eastman of Stanford in 1932. Fitch tossed the discus 179 feet  $\frac{1}{8}$  inch for a new world record in the national A.A.U. outdoor championships staged under a blazing sun at San Antonio, Texas. The former universal mark was 174 feet, 10 $\frac{1}{4}$  inches held by Adolfo Consolini of Italy since 1941.

The A.A.U. title games proved the highlight of the outdoor season and were aided by the appearance of another European star, Lennart Strand of Sweden. Strand, 4:04.8 conqueror of Cunder Haegg and Arne Andersson in the Summer of 1945 and champion of his country at 1,500 meters, more than lived up to everything that had been said and written about him as he captured this nation's 1,500-meter crown. In leading home MacMitchell and Quinn by 30 and 40 yards, respectively, the

Flying Swede was caught in 3:54.5. Strand, who had won at Compton, California, in his first start over here, closed out his visit with a 4:09 mile in New York's Triborough Stadium. Finishing with a terrific burst of speed, Strand left Quinn, Ed Walsh, and MacMitchell strung out in that order from 60 to 120 yards behind.

With Frank Martin, Ed O'Toole, James Rafferty, Irving Folsworth, and Frank Berst scoring first places, the New York A.C. added another A.A.U. outdoor crown to its ever-growing collection. Martin won the 5,000-meter run and O'Toole the 10,000 while Rafferty annexed the 3,000-meter steeplechase; Folsworth the 16-pound hammer throw; and Berst the 56-pound weight toss.

Illinois, paced by the churning legs of McKenley, proved outstanding in all intercollegiate competition which it was able to enter. The Illini took Western Conference laurels indoors and out and captured top prize in the National Collegiate A.A. outdoor championships. McKenley was a double victor in the N.C.A.A. games, annexing the 220 and 440.

Tuskegee Institute, led by Miss Alice Coachman, dominated the women's competition again in 1946 and retained two national A.A.U. team championships. Miss Coachman scored a triple in the outdoor games, winning the 50- and 100-meter dashes and the running high jump after gaining a double in the 50-yard sprint and high jump indoors. Miss Dorothy Dodson of Chicago was the shining light of the field events, taking the javelin throw, discus and shotput outdoors and the shotput indoors.

A new schoolboy star rose in the West and established a national interscholastic record for the 12-pound shotput. John Frank Helwig of Mount Carmel High School in Los Angeles put the ball 59 feet 5 $\frac{1}{8}$  inches to surpass the previous standard of 59 feet, 1 $\frac{1}{2}$  inches set by Dewitt Coulter, former Army football star, in 1943. Helwig, who is 19, has gone unbeaten in his specialty in more than twenty meets over a period of three years.

THOMAS V. HANEY.

**TRADE, Foreign.** As settlement of the maritime strike in October permitted renewed activity in domestic shipping, the value of exports in December rose to a new 1946 high of \$1,094 million from the low October value of \$537 million and a previous high of \$987 million in November. General imports also advanced to a new high of \$536 million in December.

The tonnage of export cargo in December dropped to 17,413 million pounds from the November volume of 18,899 million pounds. In contrast to the rise in value, the December import shipping weight of 10,767 million pounds showed only a slight decrease over the November figure of 10,909 million pounds and was lower than in each of the months of July, August, and September.

The monthly and yearly figures of United States foreign trade for 1946 and 1945 are shown in the accompanying tables on page 657.

**TRANS-JORDAN.** An Arab territory lying east of Palestine and south of Syria. Together with Palestine it was turned over to Great Britain as a Class A Mandate on Sept. 29, 1923. Area, 34,700 square miles. Capital, Amman.

**Population.** The population is around 400,000, almost exclusively Arab. Many are nomads, for there are few towns and no large cities in the country. The people are Moslem except for some 50,000 Christians. In 1944 the 175 schools had 16,066 pupils. (continued, foot of p. 657.)

(Trans-Jordan, continued from p. 656.)

**The Economy.** Most of the area is desert or semi-desert. Only in the western part is agriculture pos-

sible, and even there it is precarious. Irrigation could work wonders on the country's productiveness but few sources from which water could be obtained are available. In 1942 record crops of 200,000 tons of wheat and 100,000 tons of barley were reported. The terrain and climate are adapted to raising sheep and goats.

There is very little international trade in or out of the country. The Hejaz Railway runs through Amman as far south as Ma'an, beyond which point it has been abandoned. Under the mandatory regime several modern highways were constructed, notably one connecting Palestine with Iraq.

**Government.** Originally Trans-Jordan was administered as part of the Palestine Mandate. However, the stipulations concerning Jewish immigration were not to apply to Trans-Jordan, which is thus closed to Zionist colonization. An autonomous Arab administration was recognized under the Emir Abdullah (son of the late King Hussein of the Hejaz) whose government was to operate within the framework of the mandate. The High Commissioner for Palestine held the same office for Trans-Jordan, and was represented in Amman by a British Resident. During 1946 Trans-Jordan became an independent Kingdom (see below) closely tied, by a military alliance, to Great Britain. The King is assisted by a Council of Ministers and a Legis-

lative Assembly. The defense of the country is entrusted to the Trans-Jordan Frontier Force and the Arab Legion.

**Events.** On January 17 Foreign Secretary Ernest Bevin announced in the United Nations Assembly that Great Britain was preparing to give Trans-Jordan its independence. Zionist elements immediately protested, asserting that Britain had no legal right thus to act unilaterally with regard to an area under League of Nations mandate. Britain had long been under attack from these same sources for having split Trans-Jordan off from the original Palestine mandate and for having forbidden Jewish settlement east of the Jordan. The Arabs, on the other hand, were pleased because independence would remove the threat that Trans-Jordan might, by a reversal of British policy, be opened to Zionist colonization. To be sure, the enthusiasm of King Ibn Saud was checked by his jealousy, thoroughly reciprocated, of the Hashimite family represented in Trans-Jordan by the Emir, and King-to-be, Abdullah. Further, there were the Saudian territorial claims to parts of Trans-Jordan—around Aqaba and Ma'an, as well as a corridor in the east leading to Syria.

Abdullah arrived in London on February 22, and a month later he signed a treaty with Great Britain which gave his country its independence and set up an alliance between them. The text of this treaty was published on March 28 as a *White Paper*. Under its terms Trans-Jordan was to open to Britain its lines of communication—roads, railways, airports, pipelines, etc.—while the British undertook to maintain the Arab Legion, which under Glubb Pasha had become a first-class fighting force for the defense of Trans-Jordan. The two countries exchanged pledges of mutual assistance in the event of trouble.

On April 2 the Lebanese delegation to the Council of the Arab League asked the latter to consider critically the provisions of the treaty, especially the military clauses. Several American Congressmen also protested to the Secretary of State against the treaty, which they felt was a violation of the Anglo-American Convention of 1924. In a letter addressed to Senator Myers of Pennsylvania (April 23), Mr. Byrnes denied any such violation.

At the end of May there was a three-day period of festivity and Bedouin pageantry in Amman to celebrate independence and to witness Abdullah's assumption of the Kingship.

On July 8 it was announced that Trans-Jordan had applied for membership in the United Nations. In August, when the matter came before the Security Council, both the Soviet Union and Poland questioned the reality of Trans-Jordan's "independence" and on July 29 used the veto to prevent that country from being admitted to membership.

A scheme long nurtured by Abdullah was the creation of a Greater Syria, probably exclusive of Lebanon, in which he hoped to play a stellar role. A more promising arrangement would appear to have been a form of loose federal union between the two countries ruled by the Hashimite house—Trans-Jordan and Iraq. Talk of such a limited union was heard early in the year after a conference between Abdullah and his kinsman, the Regent of Iraq, Prince Abdul Illah, uncle of the boy king, Faisal II. Again, on August 29, upon his return home from a visit with the Regent at Mosul, Abdullah declared that the two countries were planning to merge the direction of their military, foreign and cultural affairs and to form a customs union, but without losing entirely their separate identities. The common flag was to be the Hashi-

mite standard flown during the Arab Revolt of World War I. On November 11, at the opening of the Trans-Jordan Legislative Assembly, Abdullah stated that his country was ready to join Iraq or any other Arab state in a union. The new constitution adopted by the Assembly, however, prohibited the king from making major political changes of this sort without its consent.

On August 8 the government of Trans-Jordan signed an agreement with the Transarabian Pipeline Co. granting a concession by which the latter was permitted to construct and maintain a pipeline across the country from the Saudi Arabian oilfields of the Arabian-American Oil Co., along the Persian Gulf, to Palestine, for a reported annual payment of \$250,000.

ROBERT GALE WOOLBERT.

**TREASURY, U.S. Department of the.** A Department of the U.S. Government which was composed in 1945 of the following principal branches.

- Bureau of the Comptroller of the Currency
- Bureau of Customs
- Bureau of Engraving and Printing
- Bureau of Internal Revenue
- Bureau of the Mint
- Bureau of Narcotics (see NARCOTIC DRUGS CONTROL)
- Committee on Practice
- Division of Monetary Research
- Division of Personnel
- Division of Research and Statistics
- Division of Tax Research
- Legal Division
- Office of the Chief Clerk
- Fiscal Service
- United States Savings Bonds Division
- Foreign Funds Control
- Office of Superintendent of Treasury Buildings
- Procurement Division
- U S Secret Service
- United States Coast Guard
- Office of the Tax Legislative Counsel

The Secretary of the Treasury in 1946 was John W. Snyder. See the separate listing of important bureaus; BANKS AND BANKING; COAST GUARD; FINANCIAL REVIEW; PUBLIC FINANCE; SILVER; TAXATION.

**TRINIDAD AND TOBAGO.** A united British colony near the coast of Venezuela, comprising the islands of Trinidad (1,864 square miles), Tobago (116 square miles), and adjacent islands. Total population (1946 census, provisional), 556,700. Capital, Port of Spain, Trinidad (105,195). Under agreements concluded between the United Kingdom and the United States defense bases were leased to the United States for 99 years. The colony is administered by a governor with the assistance of an executive council and a legislative council of 19, including 9 elected members. Most of the native inhabitants are of African descent, but there is a large group of East Indians as well as a small group of Chinese.

**Production and Trade.** The varied products of the islands include petroleum, asphalt, sugar, cocoa, rum and bitters, copra, rice, coffee, timber, and fruits. The chief exports in 1944 were petroleum products, sugar, and cocoa. Imports were largely articles of food and drink and tobacco. The United Kingdom received the largest share of the exports but Canada was the chief source of imports.

**TRUK.** A former Japanese naval base in the west central Pacific, comprising a cluster of islands (151° 22' E. and 6° 57' N.) in a lagoon surrounded by coral reefs (32 miles across from east to west), in the eastern Caroline group of the mandated Japanese Pacific Islands (q.v.). Area, 51 square miles. Civil population (1938), 17,133. There are

245 islands in all, the chief being Dublon (3 miles long), Fefan, Moen, Tol, Udot, and Uman. The islands, of volcanic and coral formation, are for the most part high, and offer good protection and safe anchorages for ships. Truk passed under the control of United States armed forces following the surrender of Japan in 1945. On November 6, 1946, the United States requested that the island be placed under the trusteeship of the United Nations with the United States as administering authority.

**TUNNELS.** Many tunnel works which were halted when the war broke out, or in 1942-1943, are being renewed, but under the prevailing unfavorable conditions as to the supply of men, machinery, and materials. Of these tunnels, the majority are on hydraulic projects for irrigation and power development, although they include also a number for public roads, and others for municipal water supply. One of the long tunnels proposed is that of 77 miles which is to form part of an aqueduct for bringing water from the Colorado River to Phoenix and the arid central plateau of Arizona. This is still short, however, of the existing 82-mile rock tunnel bringing water from the Delaware River to increase the municipal supply of New York City.

A 30-mile, low-level, highway tunnel through the Cascade Mountains, under the Snoqualmie Pass, has been reported as impracticable for economic reasons. It was to be on a road connecting Seattle and Spokane, Washington, in sections of the State separated by the mountain range. However, a tunnel 3 to 5 miles long, at an elevation of about 2,500 ft., may be practicable and economical. Seattle plans twin, two-lane, highway tunnels, 3,200 ft. long, to open up a direct route to the north. A combined road and railway tunnel connecting San Francisco and Oakland is proposed, for traffic is approaching the limit of the capacity of the present twelve-mile bridge. This tunnel would be comparatively short, mainly under the navigation channel, with approaches in long embankments or causeways. (See BRIDGES.)

A 26-mile tunnel through the Tehachapi Mountains, on a high-speed road between Bakersfield and Los Angeles, is proposed by the California State Highway Department. Its elevation would be 1,500 feet above sea-level. A curious feature is that it would be a double-deck tunnel, having four lanes for automobile traffic on the upper deck, a two-lane roadway for motor trucks and a double-track railway on the lower deck.

New ventilating apparatus was installed in the Hoosac Tunnel of the Boston & Maine R.R. in 1946 as the latest stage of the tunnel ventilation problem. This five-mile double-track tunnel, opened in 1873, is 24 feet wide and 22 feet 8 inches high. Originally it was ventilated by natural draft through a shaft, but with increasing traffic this became insufficient and in 1911 electric traction was introduced, using electric locomotives to haul trains through the tunnel (steam locomotives and all). In 1945, this method of operation was changed; the trains over the entire division are drawn by oil-electric locomotives, and a new ventilating fan equipment was put in service in the tunnel during the year 1946.

Two tunnels are being driven to bring water from the western slopes of the Rocky Mountains for distribution on the eastern slopes. One is a 23-mile tunnel, nine feet in diameter, for the city supply of Denver. The other is the 13-mile Continental Divide tunnel of the U.S. Bureau of Reclamation for irrigation in Colorado. The latter is practically completed. On the Provo River project

of the Bureau of Reclamation, work on the Duchesne tunnel, 6 miles long and 9 ft. 3 in. in diameter, is to be resumed soon. On the Colorado-Big Thompson project are the Rams Horn and Prospect Mountain tunnels; the first 1.3 miles long and 10 ft. in diameter, the second, 1.1 miles long and 12½ ft. in diameter. On the Columbia Basin project, in Washington, is the 2-mile Bacon tunnel, 23 ft. in diameter.

In Texas, the State Highway Department is interested in two highway tunnels under the Houston Ship Channel and a third under the channel separating Galveston from the mainland. One of the Houston tunnels is expected to be started in 1947. At Birmingham, Ala., a highway tunnel through Red Mountain is proposed to facilitate traffic movements in and out of the city. At Chester, Pennsylvania, a highway tunnel under the Delaware River is planned by the Chester County authorities.

New York City has a number of highway tunnel projects, but the only one now under construction is the Battery-Brooklyn tunnel, work on which was resumed in 1945. It consists of two parallel tubes 32 feet in diameter, with center lines 48 feet apart. Bottom headings or pilot tunnels, 24 feet square, are kept in advance of the full-size bores. Two projects in the preparatory stages are the Brooklyn-Staten Island tunnel, under the Narrows, and the Crosstown tunnel to connect the Midtown tunnel under the East River with the Lincoln tunnels under the Hudson River. At Boston, it has been proposed to duplicate the present tunnel under the harbor to South Boston, owing to the heavy increase in traffic and the further increase expected with the opening of the new airport.

A serious fire occurred in the Montreal tunnel approach to the Canadian National Railway station, in January, 1946, and caused considerable damage and the blocking of the four-track tunnel with burning cars. In the repair work, the wide tunnel was divided by the construction of a central wall. In London, England, work is in progress on a large and long highway tunnel under the Thames to Dartford. A pilot tunnel was driven in 1937, but all work was stopped with the opening of war in 1939. A highway tunnel under the Tyne at Newcastle was authorized by the government in July, 1946. The irrepressible Channel Tunnel project, to connect the railways of England and France, came out again after the war, in 1945, but again faces strong opposition.

The Mont Cenis tunnel through the Alps, connecting the railways of France and Italy was reopened in September. It had been blocked by the retreating Germans by blasts, mines, and the wrecking of trains in the tunnel. In this sector of the war, the Germans made extensive use of the mountain tunnels as factories, aircraft repair shops, and barracks. France is building an eight-mile tunnel on a hydroelectric project in Morocco.

In Mexico, it was expected that the seven-mile El Mirador tunnel for irrigation near Puebla would be completed in 1946. It is 16 feet in diameter and was driven from the two portals and from an intermediate adit or horizontal side shaft. The water supply of the suburban district of Honolulu is to be increased by means of a two-mile tunnel from a new source. A grandiose project for the improvement of the Yangtze River, as planned for the Chinese government by the U.S. Bureau of Reclamation, includes a ship tunnel 200 feet high and 100 feet wide. This recalls the ship tunnel that was to form a part of the Darien or San Blas route for the Panama Canal.

E. E. RUSSELL TRATMAN.

**TURKEY.** A republic comprising Asia Minor and a narrow zone in Europe along the Straits, as well as Imbros, Tenedos and the Rabbit Islands in the Aegean Sea. Area, 296,107 square miles. Capital, Ankara (Angora).

**Characteristics of the Population.** The population on Oct. 20, 1940, was 17,820,950, of which 1,516,005 lived in European Turkey. The rate of increase is high, so that by the end of 1946 there were probably some nineteen million inhabitants in the country. The principal cities, with their 1944 populations are: Istanbul, 844,090; Izmir (Smyrna), 200,088; Ankara, 227,505; Adana, 100,367. Turkey is preeminently a rural country. After World War I she was deprived of almost all areas inhabited by non-Turkish elements, so that only a few national or religious minorities still remain within the country. These are chiefly Greeks, Armenians, Kurds and Circassians. Islam was disestablished as the state religion shortly after the First World War, but most Turks still profess it as their religion. The 1935 census provided the following figures: Moslems, 15,838,673; Orthodox, 125,046; Jews, 78,730; Gregorians, 44,526; and Roman Catholics, 32,155.

The educational system has been thoroughly reformed under the Republic. Primary education is nominally compulsory for both boys and girls. Education at all levels is under the supervision of the Ministry of Public Instruction, even that given in the schools of the non-Moslem communities. In 1942-43 there were 11,404 primary schools; 247 secondary schools; 214 lycées, normal and professional schools; and 23 institutions of higher learning. Among the latter are the State University of Istanbul and Robert College, an American-founded institution near that city. The use of the Latin alphabet was made compulsory in 1929.

**The Country and Its Economy.** Agriculture provides the means of livelihood for two-thirds of the Turkish people. The soil is generally fertile, but rainfall is often deficient and methods are primitive. Nonetheless rapid strides have been made in recent years to improve agricultural techniques and apparatus. The construction of new highways, railroads and factories has aided in the program of modernizing Turkish farm life.

The principal crops are indicated by the following statistics for 1942: wheat—4,369,455 hectares, 2,000,105 metric tons; barley—1,931,576 hectares, 902,095 metric tons; maize—631,132 hectares, 360,019 metric tons; cotton—326,687 hectares, 212,694 metric tons; tobacco—198,880 acres, 68,942,000 kilograms. Other large products are oats, silk, opium, figs, olives and olive oil. In 1943 the animal population was: 16,124,884 sheep, 11,815,622 goats, 7,170,930 cattle, 1,217,997 donkeys, 716,327 horses and 649,712 buffaloes. Wool and goat hair are among the country's chief exports. Unlike the other countries of the Near East, Turkey possesses valuable forest resources—some 23,000,000 acres, of which the state owns 88 percent.

Turkey is also rich in minerals, most of them little exploited. Production figures in metric tons for 1944 were: coal, 3,165,741; lignite, 553,695; chrome, 65,634; cement, 151,472. Experts believe that the future of Turkey's mining industry is bright.

The state has also, since the inauguration of the first five-year plan in 1934, pushed a program of rapid industrialization. Typical of this development was the construction of the iron and steel plant at Karabük, with an estimated annual production of 219,000 metric tons of pig iron, 229,000 tons of coke, 171,000 tons of steel ingots and 150,000 tons of rolled steel products.

Exports and imports for 1943 were, respectively, valued at £T247,000,000 and £T203,000,000. The Turks have a small but growing merchant marine. The length of the country's railway network has been expanded greatly in recent years until it now exceeds 4,600 miles, of which 95 percent is state-owned.

**Government.** The Constitution of Jan. 20, 1921, as amended in 1924 and 1934, confers both executive and legislative power on the Grand National Assembly, or *Kamutay*. This body is elected every four years by universal direct male and female suffrage, and consists of 465 deputies. The constitutional law provides that "the Assembly exercise the executive power through the President of the Republic elected by itself and through the Council of Ministers chosen by him." The Assembly is nominally vested with power to control the acts of the Government and even to dismiss it. In reality, under both the first President, Kemal Atatürk, and the present incumbent, İsmet İnönü, there has been what amounts to a presidential dictatorship. Until the 1946 elections (see below) all members of the Assembly belonged to the Republican People's (or Popular) Party.

The reforms of Atatürk included a thorough revision of the judicial and legal systems. The new civil code was almost identical with that of Switzerland, the new Penal Code was largely based on that of Italy, and the Commercial Code on that of Germany.

The Turkish budget showed a steady rise in both revenue and expenditures during recent years. Revenues for 1946 were estimated at £T894,668,000, and expenditures at £T990,572,884. The national debt also rose during these years until on April 22, 1944, it was £T1,479,483,677.

Military service is compulsory and normally about one-half of the men liable actually serve. Following the outbreak of World War II, the precarious position of Turkish neutrality required that the army be considerably increased and that attempts be made to acquire more modern equipment, which Turkey herself does not manufacture. Some of her requirements were met by shipments of British and American arms. The Turkish Navy comprises the former German cruiser *Goeben* (rebuilt and now called the *Yavuz*) of 23,100 tons, two small and old cruisers, and various subsidiary vessels. The air force is equipped with foreign planes, chiefly German, British and American. Altogether Turkey's defense forces are, despite the absence of much necessary modern equipment, an important element in Near East politics and could, if called upon, give a good account of themselves. The Anatolian peasant has long enjoyed the reputation of making an excellent soldier, especially when on the defensive in his own hills.

**Events, 1946. Dispute with the Soviet Union.** The year opened with Turco-Russian relations clouded by the general fear that the Soviet Union was preparing to move forward in the Middle East. Turkish disquiet arose not only from events in Iran but from the troubled situation in the lower Balkans. As for the Kars and Ardalan districts in Turkish Armenia, Prime Minister Şukru Saracoglu officially rejected the Soviet claim to them on January 6. He pointed out that the Russian cession of these areas in 1921 had followed a plebescite in which the overwhelming majority of votes had been cast for union with Turkey. The territory in question contained only 6,600 square miles and 300,000 inhabitants, but was strategically important.

As the Iranian crisis deepened, the Turks became

more and more apprehensive, yet they never wavered in their determination to resist any attempt to encroach upon their national territory and sovereignty. As part of the "war of nerves," Armenian communities throughout the world joined in condemning Turkish rule and calling for the unification of all Armenian territory within the Soviet Union. An attempt to exploit Kurdish discontent was also made, e.g., an article in the Soviet periodical *Trud* (June 15) charged Turkey with abusing the Kurds.

By late spring the Iranian issue became less acute, but there was no real détente in relations between Moscow and Ankara. On July 18 President Inonu asserted that the Turkish Army would continue to be kept at war strength, as it had been since the early days of World War II. This meant keeping some million men under arms—a terribly serious drain on the country's already unbalanced economy.

In early August, immediately after Saracoglu had been replaced as Prime Minister by Peker, a new crisis supervened. On August 8 the Soviets sent a note to Turkey requesting a change in the regime of the Straits as fixed by the Montreux Convention of 1936. The gist of the Russian demand was that Turkey agree to the Straits being regulated in the future only by the Black Sea Powers (thus excluding Britain, France, and several of the other Montreux signatories). Moscow also asked that the defense of the Straits be made a joint Russo-Turkish responsibility.

The Russian position, as set forth in this note, is clearly elucidated by the following excerpts: "Events during the war showed clearly that the regime of the Black Sea straits established by the Montreux Convention in 1936 does not correspond to the interests of security of Black Sea powers and does not safeguard conditions that would prevent the use of these straits for hostile ends against the powers." The note contained five suggestions for a new straits pact:

- "(1) The straits should always be open for the passage of merchant ships of all countries;
- "(2) The straits should always be open for the passage of warships of the Black Sea Powers,
- "(3) The passage through the straits of warships of non-Black Sea powers is not permitted with the exception of cases specially provided for,
- "(4) The establishment of the regime of the straits as the only sea route leading out of and into the Black Sea must constitute the competence of Turkey and the other Black Sea powers,
- "(5) Turkey and the Soviet Union, as the powers most interested in and capable of ensuring the freedom of merchant shipping and security in the straits, to organize by joint means the defense of the straits in order to prevent their use by other states for purposes hostile to the Black Sea powers."

What the Russians wanted was not to open the Straits wider, but to close them to all outside Powers, and they wanted to do this through bilateral negotiations with the Turks rather than through a general revision of the Montreux arrangement. The latter would entail a conference in which Russia would be only one among a dozen or so powers. The United States and Britain backed Turkey's refusal to cede to Russian pressure. In a note of August 19 the United States rejected Soviet demands for a share in the military control of the Straits, but expressed a willingness to revise the Montreux Convention. Britain took a similar line.

After receiving Turkey's flat rejection in a note of August 23, the Russians began charging, in the press and over the radio, that Britain was arming the Turks and that, for example, British officers were in charge of airports and other military in-

stallations on or near the Straits. On September 24 they delivered a new note to the Turks, reiterating that the Montreux regime had clearly been shown to be inadequate for preventing hostile vessels from entering the Black Sea, and suggesting Russo-Turkish talks before any general conference were held.

On October 9 Ambassador Smith handed the Russians an American reply, in which the Soviet government was reminded that the Potsdam Protocol had not contemplated a settlement of the Straits issue by the Black Sea Powers alone, but by all the interested states, including the United States. The note concluded with the following statement: "My government also feels that it would be lacking in frankness if it should fail to point out again at this time, in the most friendly spirit, that in its opinion the Government of Turkey should continue to be primarily responsible for the defense of the Straits and that should the Straits become the object of attack or threat of attack by an aggressor, the resulting situation would be a matter for action on the part of the Security Council of the United Nations." The Turkish reply of October 18 likewise rejected the idea of bilateral negotiations.

There the matter seemed to rest for the remainder of the year. By way of showing its interest in the eastern Mediterranean, the United States sent several American warships there late in the fall—four of them called at Izmir on November 23. Shortly thereafter the Turks extended martial law for another six months in the region along the Straits and in Thrace.

**Other International Affairs.** Relations with the Arab countries had been cool for a number of years, particularly since the Turkish annexation of the Alexandretta district (Hatay) in 1939 at the expense of Syria. During the year a change in Turkey's policy toward her southern neighbors could be discerned. While not wishing to join the Arab League, even supposing that she might be invited, Turkey sought closer relations with the Arab states. With Russia exerting pressure from the west, north and east, the Turks wanted at least to be sure of having friends to the south.

On March 29 Turkey and Iraq signed in Ankara a pact providing for "mutual assistance on the question of public order"—a step necessitated by Russian intrigues in Iran and among the Kurds. In mid-June President El Khoury and other high Lebanese dignitaries were welcomed in Ankara on an official visit. In opening Parliament on November 1, President Inonu declared that Turkey was anxious to cultivate friendly relations with the Arab countries.

In a reciprocal air agreement between Turkey and the United States, signed on February 12, Pan American Airways acquired traffic and landing rights at Istanbul and Ankara. On April 5 the United States battleship *Missouri* arrived at Istanbul bearing the body of Mehmet Ertogun, Turkish Ambassador who had died at Washington in November 1944.

On March 25 Under-Secretary of War Kenneth Royall revealed in Cairo that the United States was extending Turkey a credit of \$10,000,000 so that she could purchase some of the surplus American military goods in the Middle East. Prime Minister Saracoglu told the Grand National Assembly on May 9 that the United States asked only \$4,500,000 in order to clear up its lend-lease account with Turkey—a sum much less than anticipated. Earlier in the year Turkey was reported to have applied for a \$500,000,000 loan from the Export-Import Bank.

**Domestic Affairs.** An aftermath of the December 4, 1945, demonstrations against two Leftist newspapers in Istanbul—*Tan* and *La Turquie*—(see YEAR BOOK for 1945, p. 612) was the arrest early in 1946 of four persons connected with these journals. On March 23 they were sentenced to three years' imprisonment for having printed articles harmful to the dignity of high officials. Despite the government's professed desire to see opposition parties created, it was hostile to groups that might be suspected of a Communist orientation. Finally, in December it suppressed the two so-called Socialist parties and jailed 44 of their members. This spelled the end of any openly organized Marxist movement.

In quite a different category was the Democratic Party organized by former Prime Minister Jelal Bayar. Its platform did not differ notably from the professed creed of the Republican People's Party, but insisted that the terms of the Constitution be honestly applied. The Democratic Party also objected to the arbitrary action of the government in holding the municipal elections in May, far ahead of the appointed time, thus depriving the Democrats of a chance to get properly organized. They therefore decided to boycott the voting in May. For this they were criticized as bringing discredit on the whole country by President Inonu, speaking at the People's Party Congress convened on May 10. At this congress, attended by 336 delegates, the Party voted in favor of the direct secret ballot and universal suffrage, and for an amendment to the law of association permitting the formation of professional and class organizations (including labor unions) without special authorization from the government, as had hitherto been the case.

The Democratic Party decided to participate in the national elections on July 21, and nominated candidates in over half the 465 constituencies. It complained that the authorities interfered with its organization activities, and even charged them with acts of terrorism. It also found the unsolicited support of the Moscow Radio to be of harm rather than help. The result of the voting, the first to take place under the secret, direct and universal ballot, was 395 seats won by the People's Party, 62 by the Democrats and 8 by independents. The Democrats won in the urban centers, such as Istanbul. Four days after the election the government put an end to the freedom of the press that had been enjoyed during the campaign, and in Istanbul it closed two newspapers.

Without warning the Saracoglu ministry resigned on August 4, to be succeeded by one headed by Recep Peker, former Minister of the Interior. Only a few of the men were holdovers, notably Hasan Saka, Minister of Foreign Affairs. On the following day Ismet Inonu was reelected to serve his fourth term as President of the Republic, by a vote of 388 to 59 (for Marshal Fevzi Cakmak, candidate of the Democratic Party).

One of the most difficult problems confronting the Turkish government was inflation, product of wartime conditions. Especially hard hit by the high price level were the exporters, who found their foreign markets drying up. The government sought to ease their situation by granting a 40 percent subsidy on exports and by devaluing the Turkish pound 45 percent in relation to the British pound.

ROBERT GALE WOOLBERT.

**TWENTIETH CENTURY FUND.** A nonprofit organization for research and public education on economic

questions. The Fund was founded in 1919 and endowed by the late Edward A. Filene, Boston merchant and philanthropist. Its entire income, administered as a public trust by a Board of Trustees, is devoted to its own research and educational activities. For each major investigation the Fund appoints a special research staff and an impartial committee of qualified persons who use the factual findings of the staff as a basis for recommendations on public policy. The Fund issues its reports in book form and supplements these with news releases, pamphlets, bulletins, study outlines, magazine articles, and other materials, including educational films and radio programs. Active contact work is maintained with organizations and educational institutions.

The Fund's activities for 1946-1947 carry forward a long-range program directed toward the problem of rebuilding our peacetime economic system. Work was completed during 1946 on a comprehensive report of *America's Needs and Resources, 1950 and 1960*, scheduled for publication early in 1947. The Fund also completed a survey of the foreign economic and investment position and policies of the United States and published the findings of its Committee on Foreign and Economic Policy, based on this survey. The final volume in a popular series of reports on *When the War Ends* was issued, summarizing the national and international scene from the viewpoint of returning veterans. Nearing publication at the end of 1946 were the first report on the broad subject of international cartel and domestic monopoly problems and the findings of a survey of the relations between government and the electric power industry.

In 1947 the Fund will undertake a series of related projects on the major theme of implementing full employment, including an appraisal of measures to maintain full employment, an analysis of government credit policies, and a large-scale survey of the labor market and the national welfare. In addition the Fund's Labor Committee will review the role of the government in labor relations and report its recommendations on labor legislation and policy. The Fund also plans to study the economy of certain foreign countries in relation to United States investment policies and possibilities.

The officers of the Fund are: John H. Fahey, President; Henry S. Dennison, Chairman, Executive Committee; Morris E. Leeds, Treasurer; Evans Clark, Executive Director; and J. Frederic Dewhurst, Economist. Address: 330 West 42 Street, New York 18, New York.

**UGANDA.** A British protectorate in East Africa. Area, 93,981 square miles, including 13,680 square miles of water. Population (1944 estimate), 3,930,724, of whom 3,901,440 are African, 26,537 Asiatic and 2,747 European. Capital, Entebbe. Chief city, Kampala. The administration is in the hands of a governor assisted by an executive council and a legislative council. The province of Buganda is recognized as a native kingdom, and the king is assisted by three native ministers and a native assembly. In Bunyoro, Ankele and Toro purely native matters are handled by native assemblies. Uganda forms a customs union with Kenya and Tanganyika. A government educational scheme has supplemented the earlier mission schools, which still receive grants.

**Production and Trade.** Cotton, the chief product, occupied 1,072,495 acres in 1944-1945. Coffee, sugar, oil seeds, tin, hides, ivory and tobacco are also produced. The chief exports in 1944 were cotton (£5,043,413) and coffee (£1,045,430). Im-

ports were largely cotton textiles and other manufactures. Total exports (£7,531,862) were far ahead of imports for consumption (£2,813,380).

**ULITHI ISLANDS.** A former Japanese atoll in the western Carolines, occupied by United States armed forces, September 20–21, 1944. It comprises a ring of islands that surround a broad lagoon, and lies about 100 miles northeast of Yap. On November 6, 1946, the United States requested that the island be placed under United Nations trusteeship with the United States as administering authority.

**UNION OF SOVIET SOCIALIST REPUBLICS (U.S.S.R.).** A state occupying eastern Europe and central and northern Asia. Capital: Moscow.

**Area and Population.** The area as of Aug. 31, 1939, was about 8,200,000 square miles (73 percent in Asia and 27 percent in Europe). The census of Jan. 17, 1939, showed a population of 170,467,186 (88,802,205 females and 81,664,981 males), compared with 147,027,915 at the 1926 census. The urban population at the 1939 census was 55,909,908; rural, 124,557,278. Following the outbreak of World War II on Sept. 1, 1939, various territories (of Finland, Poland, and Rumania together with Estonia, Lithuania, and Latvia) were annexed to the Soviet Union, were occupied by German, Finnish, and Rumanian armed forces in 1941, and were freed from German occupation by Soviet armed forces and reincorporated into the Soviet Union in 1944.

The Polish territories were incorporated in the Ukrainian and Byelorussian Soviet Socialist Republics, Oct. 1–2, 1939. The Finnish provinces on Mar. 31, 1940, were joined to the Karelian S.S.R., which was then renamed the Karelo-Finnish S.S.R. and raised to the status of a constituent republic of the U.S.S.R. The major part of Bessarabia was merged with the Moldavian Autonomous S.S.R. on Aug. 2, 1940, to form the constituent Moldavian S.S.R. The remainder of Bessarabia, together with northern Bukovina, was incorporated in the Ukrainian S.S.R. Lithuania, Latvia, and Estonia were given the status of constituent republics upon annexation. The addition of these five new units raised the number of constituent republics of the Soviet Union from 11 to 16. These republics, with their capitals, areas, and populations, are listed in the accompanying table.

#### U.S.S.R. CONSTITUENT REPUBLICS

Republics	Capital	Sq. mi.	Population
Russian S.F.S.R.	Moscow	6,444,000	109,279,000
Ukrainian S.S.R.	Kiev	223,000	40,000,000
Byelorussian S.S.R.	Minsk	89,000	10,386,000
Azerbaijan S.S.R.	Baku	33,000	3,210,000
Georgian S.S.R.	Tbilisi	27,000	3,542,000
Armenian S.S.R.	Yerivan	12,000	1,300,000
Turkmen S.S.R.	Ashkhabad	187,000	1,254,000
Uzbek S.S.R.	Tashkent	158,000	6,282,000
Tajik S.S.R.	Stalinabad	55,000	1,485,000
Kazakh S.S.R.	Alma-Ata	1,058,000	6,146,000
Kirghiz S.S.R.	Frunze	78,000	1,500,000
Karelo-Finnish S.S.R.	Petrozavodsk	76,000	500,000
Moldavian S.S.R.	Kishinev	13,000	2,200,000
Lithuanian S.S.R.	Vilna	24,000	2,880,000
Latvian S.S.R.	Riga	25,000	1,971,000
Estonian S.S.R.	Tallinn	18,000	1,131,000

The total area of the Soviet Union, based on the 16 constituent republics, was 8,518,000 square miles and the population was about 193,000,000. Ruthenia, also called Carpatho-Ukraine (4,886 sq. mi.; pop. 800,000) was ceded to the U.S.S.R. by Czechoslovakia on June 29, 1945, and was incorporated into the Ukrainian S.S.R. The former Japanese territories of southern Sakhalin (14,662 sq. mi.) and the Kurile Islands (3,944 sq. mi.) were made an integral part of the U.S.S.R. and na-

tionalized (effective Sept. 20, 1945), according to a decree of the Supreme Soviet dated Feb. 2, 1946. This was in accordance with the terms of the Yalta agreement signed Feb. 11, 1945.

The populations of the 38 leading cities, including the capitals of the 16 constituent republics, are shown in the accompanying table.

#### POPULATIONS OF CITIES

City	Population	City	Population
Moscow	4,137,018	Voronezh	326,836
Leningrad	3,191,304	Yaroslavl	298,065
Kiev	846,293	Ivanovo	285,069
Kharkov	833,432	Archangel	281,091
Baku	809,347	Omsk	280,716
Gorky	644,116	Chelyabinsk	273,127
Odesa	604,223	Tula	272,403
Tashkent	585,005	Vilna	250,000
Tbilisi	519,176	Minsk	238,772
Rostov-on-Don	510,253	Alma-Ata	230,000
Dnepropetrovsk	500,662	Vladivostok	206,432
Stalino	462,395	Ervan	200,000
Stalingrad	445,476	Stalinsk	169,538
Sverdlovsk	425,544	Tallinn	147,000
Novosibirsk	405,589	Ashkhabad	126,600
Kazan	401,665	Kishinev	110,000
Kuibyshev	390,267	Frunze	93,000
Riga	385,000	Stalinabad	83,000
Saratov	375,860	Petrozavodsk	70,000

**Education.** In the academic year 1945, pupils attending elementary and secondary schools numbered about 32,000,000. There were about 1,200,000 students in technical schools and workers' faculties; about 1,800,000 children in nurseries and kindergartens, exclusive of 5,700,000 children placed in collective farm nurseries and kindergartens during harvest season; and 564,000 students in universities and colleges. The expenditure for education in 1945 was 28.6 billion rubles (20.4 billion rubles in 1944).

**Production, etc.** In Soviet Union transport and communications are conducted as Federal departments. Banking is centralized in a State Bank under government control. Distribution is socialized, with retail trade in the cities conducted mainly by local administrative bodies and in the villages by consumer cooperatives. Industrial production is carried on largely by State enterprises, operating under the general direction of appropriate commissariats (government departments). A State Planning Commission (Gosplan) plots the objectives for each year and for five-year periods. An Economic Council acts as a coordinative body. An organization in the Commissariat of State Control checks and supervises results.

State planning is an essential of Soviet economy and it is designed to direct and coordinate the employment of the energies and resources of the country for orderly development. However, the planning system goes beyond the economic field. It includes science, education, public health, and the extensive social services designed to safeguard the welfare and security of the citizenship. Beginning in 1939, the Soviet Government withheld publication of detailed information on industrial production, agriculture, and other phases of economic development. For prewar production figures for industry, mining, and agriculture, see YEAR BOOK for 1942, p. 698–99.

**Foreign Trade.** Foreign commerce is a governmental monopoly exercised by the Commissariat of Foreign Trade which maintains trading agencies abroad. Imports and exports are regulated in accordance with the country's system of planned economy. In 1938, the last year for which trade figures were published, imports totaled 1,422,832,000 rubles and exports 1,331,927,000 rubles, nominally equivalent to \$261,757,000 and \$250,751,000, respectively, in U.S. currency.

**Finance.** The budget of the U.S.S.R. is a summation of the budget of the Union and the budgets of the 16 constituent republics. For 1946 a budget in the amount of 319 billion rubles was approved. Expenditure included the following amounts: defense 72 billion rubles, economic development 102 billion rubles, social and cultural services 83 billion rubles, administration 6 billion rubles. In 1945 revenue was estimated at 307 billion rubles and expenditure 307 billion rubles.

The Soviet Government repudiated the State debt outstanding as of Jan. 28, 1918. On Jan. 1, 1933, the internal debt amounted to 10.088 billion rubles; on Aug. 1, 1940, it totaled 39.8 billion rubles. The nominal exchange rate of the ruble, for foreign trade exchange valuation purposes only, was 5.3 rubles to U.S. \$1 (1 ruble = \$0.1887).

**Transportation.** Railway mileage increased from 53,700 in 1937 to an estimated 62,000 miles on Jan. 1, 1941 (including lines in Russian-annexed territories). Highways extended 1,682,000 miles in 1940. Some 65,826 miles of inland waterways are navigable. There was a total of 100,000 miles in the civil air network in 1940. The merchant marine on July 1, 1939, comprised 716 vessels of 1,315,766 gross tons.

**Government.** Under the Constitution of Dec. 5, 1936, supreme political power is vested in the Supreme Soviet of the U.S.S.R., meeting twice a year, and elected for a period of four years by universal direct suffrage and with secret ballot. The Communist Party, however, is the only legal political party and all candidates for elective office must have its approval. The Supreme Soviet consists of two legislative chambers with equal rights—the Council of the Union, and the Council of Nationalities. The Council of the Union has 682 members (one for each 300,000 inhabitants) and the Council of Nationalities 657 members representing the constituent republics (25 from each), autonomous republics (11 from each), autonomous oblasts (5 from each), and national okrugs (1 from each). The two chambers in joint session elect a Presidium consisting of 42 members (including a president, 16 vice presidents (one vice president for each constituent republic of the Union), a secretary, and 24 others) with wide administrative powers between sessions of the Supreme Soviet, including ratification of treaties and declaration of a state of war. The Presidium supervises the work of the Council of the People's Commissars, selected by the Supreme Soviet, which acts as the executive and administrative organ of the state.

Joseph Stalin became general secretary of the Russian Communist Party in 1922 and after banishing Leon Trotsky in 1928 established a rigid but unofficial personal dictatorship through his control of Communist Party policies. He became a member of the Presidium in 1925 and on May 6, 1941, replaced Vyacheslav Molotov as President of the Council of People's Commissars, or Premier. Molotov became Vice Premier and Foreign Commissar. On July 1, 1941, after the German invasion began, the Presidium of the Supreme Soviet, the Central Committee of the Communist Party, and the Council of People's Commissars announced that all powers had been concentrated in the hands of a Committee for State Defense consisting of Stalin (chairman), Molotov (vice chairman), Marshal Klementy E. Voroshilov, L. P. Beria, Commissar for State Security, and Georgi M. Malenkov, general secretary of the Central Committee of the Communist Party. On July 20 Stalin assumed the post of Defense Commissar and assumed direct control over the Commissariat for State Security. The elections

to the Supreme Soviet scheduled for 1941 and 1945 were postponed and the powers of the Supreme Soviet were extended by Presidential decree.

**Events.** The peoples of the Soviet Union in 1946 were primarily concerned with healing the wounds of war. For their leaders to admit this would have been a confession of weakness. They therefore preferred to emphasize Soviet strength and to do what they could to promote reconstruction at home and to maintain the bulwarks of Soviet power abroad. The central facts of life in U.S.S.R. were starkly simple: during hostilities the country suffered the total destruction of 1,700 cities and towns, 70,000 villages, 40,000 miles of railway track, and 6,000,000 buildings, including 31,000 factories, 43,000 libraries and 84,000 schools. According to Stalin's statement of March 13, no less than 7,000,000 Soviet citizens lost their lives in battle. Civilian deaths due to blockade, malnutrition, disease, forced labor, massacre, Nazi extermination camps, and other causes attributable to war probably numbered at least another 8,000,000.

The U.S.S.R. thus bore human and material losses ten times greater than the total war losses of the United States, Britain, France, and all the other Western United Nations combined. The national impoverishment and insecurity resulting from this fact were not unrelated to the anxiety, suspicion and truculence exhibited by Soviet leaders in dealing with other Powers.

**Election of February 10.** On the second Sunday of February, for the first time since December of 1937, Soviet voters went to the polls to elect members of the two chambers of the federal Supreme Soviet (see YEAR BOOK for 1945, p. 617). The nominating system followed the pattern established nine years previously. Many were called, but few were chosen. Following final withdrawals of candidates, only one aspirant for each post appeared on the ballots. On election eve, Stalin broadcast an appeal for unanimity, arguing that the achievements of Soviet economy in peace and war demonstrated the superiority of the Soviet system and offered high hopes for the future. The salient features of the election were as shown in the accompanying table.

Eligible Voters.....	101,717,686	
Votes Cast .....	101,450,936	(98%)
Vote for the "Bloc of Party and Non-Party People" .....		99%
Deputies Elected to Soviet of the Union .....	682	
Deputies Elected to Soviet of Nationalities .....	657	
Total C. P. members in both chambers .....	1,085	
Total Non-Party Deputies .....	254	
Women Elected... ..	277	

**The Vocation of Leadership.** Members and candidates of the Communist Party numbered 6,000,000 early in 1946. This figure, representing an all-time high, reflected extensive recruitment of new members during the war years. Two-thirds of the total comprised members and candidates admitted during the preceding five years. Almost one-fifth were under 25 years of age and almost two-thirds were under 35. Despite the rules of 1939 calling for Party Congresses at least once every three years and Party Conferences annually, no Congress or Conference was held in 1946, perhaps because the Party leaders judged the newer members to be insufficiently trained in doctrine and discipline. The Central Committee therefore filled its own vacancies by appointment. At its March meeting it increased the size of the Political Bureau by adding L. P. Beria and G. M. Malenkov as members and N. A. Bulganin and A. N. Kosygin as alternates. The other members were Stalin, Molotov, Zhdanov,

Kalinin, Mikoyan, Krushchev, Andreyev, Voroshilov, and Kaganovich, with Voznessensky and Shvernik as alternates. Five Secretaries of the Central Committee were named: Stalin, Molotov, Zhdanov, V. V. Kuznetsov and G. M. Popov.

Prime Minister and Generalissimo Joseph V. Stalin remained at the helm of Party and State. He reached the age of 67 on December 21. His absence from Moscow during the celebration of November 7, 29th anniversary of the Bolshevik Revolution, and his sojourn on the Black Sea coast during part of the autumn (as in 1945) gave rise to the usual crop of hopeful rumors abroad of his illness and impending death—all of which, as usual, were much exaggerated.

A number of well-known figures of the past departed from the scene. Vladimir P. Potemkin, distinguished diplomat, former Vice-Commissar for Foreign Affairs, and Commissar for Education of the R.S.F.S.R., died on February 23. On March 19 the venerable "Uncle Mikhail" Kalinin, afflicted with failing eyesight, resigned as chairman of the Presidium of the Supreme Soviet. He died on June 2 at the age of 70. In his honor Koenigsberg was renamed Kaliningrad. Death also called for Dr. Alexander A. Bogomolets (July 19) and for the Chief Surgeon of the Red Army, Lt. Gen. Nikolai N. Burdenko (November 12).

**The Process of Government.** The new Supreme Soviet met on March 12. The Soviet of the Union elected Zhdanov as its chairman, with the chairmanship of the Soviet of Nationalities going to V. V. Kuznetsov, head of the trade unions. On March 14 the Soviet of Peoples' Commissars and its chairman, Stalin, resigned and handed over their powers to the Supreme Soviet, which unanimously re-elected them to their posts, changing their title, however (on the motion of Nikolai Shvernik), to "Ministers" and extending this shift of nomenclature to the Union and Autonomous Republics. Foreign Minister Molotov was re-elected as Vice-Chairman of the Council of Ministers. Seven other Deputy Prime Ministers were named to the Presidium: Beria, Andreyev, Mikoyan, Kosygin, Voznessensky, Voroshilov and Kaganovich. Early in April Shvernik was elected to Kalinin's post: Chairman of the Presidium of the Supreme Soviet. Malenkov became a Deputy Prime Minister on October 22.

The Supreme Soviet convened again in June and September. The new budget, presented in mid-October by Finance Minister A. G. Zverev (and termed by *Pravda* "the new Five Year Plan in action"), provided for total expenditures of 319,269,000,000 rubles, as compared with 298,590,000,000 for 1945. Expenditures for National Economy were increased from 74 to 102 billion rubles, and for social and cultural purposes from 62 to 83 billions, while the cost of the armed forces was reduced from 128 to 72 billions. Income was estimated at 335 billion rubles, of which 201 billion represented receipts from the turnover tax, while 16 billions were anticipated from the profit tax on industry, 25.5 billions from other taxes, and almost the same amount from loans and savings-bank deposits.

In the armed forces and foreign service a number of noteworthy changes of personnel occurred. On March 22 a decree of the Council of Ministers unified the Soviet fighting forces under Stalin as Minister of Armed Forces and Supreme Commander. General Bulganin was named Vice-Minister, with Marshal Alexander M. Vasilievsky becoming subordinate Vice-Minister and Chief of Staff. The other Vice-Ministers appointed were Col. Gen. Konstantin A. Vershinin (Air), Adm. N.

G. Kuznetsov (Navy), Marshal Georgi K. Zhukov (Army) and Gen. Andrei V. Khruliev (Rear). At the same time Andrei Y. Vishinsky, V. G. Dekanozov, Solomon A. Lozovsky and Maxim Litvinov were named Deputy Ministers of Foreign Affairs. Lozovsky resigned this post in the autumn to become Minister of Information. On April 10 Gen. Vassily D. Sokolovsky succeeded Zhukov as Soviet member of the Allied Control Council in Berlin. On July 18 Zhukov was reported to have been appointed to the command of the Odessa military district. On November 18 Gen. Ivan Konev succeeded Zhukov as Commander in chief of the Army. Litvinov, 70 years of age, was retired as Deputy Foreign Minister on August 24. Andrei Gromyko was promoted to this post at the end of December. Foreign efforts to discover subtle political meanings in these changes remained in the realm of speculation.

**Disciplining Backsliders.** A dominant motif of Soviet public life during 1946 was the necessity of chastising the dishonest, demoting or re-educating the inefficient, and recalling to all intellectuals and artists their prime duty of serving the cause of socialism as interpreted by the Party leadership. The stresses of war and reconversion led to a relaxation of discipline which in turn provoked a new wave of "self-criticism." On July 7 Sergei Eisenstein's film, *Ivan the Terrible*, was denied distribution as being "anti-historical and anti-artistic," since it depicted Ivan merely as a maniac and scoundrel and not as a statesman. *Culture and Life*, journal of the Agitation and Propaganda Committee of the Central Committee of the Party, announced on September 1 a sweeping purge of "bourgeois" and "anti-Soviet" plays and films, both foreign and domestic. In the same publication Eisenstein confessed his faults and agreed that "everything we do must be subordinated to the struggle against the corruptive ideology of the bourgeois world."

Soviet jazz music was assailed by high-placed critics for "decadence," "vulgarity" and "ideological scantiness." On September 8, on the order of the Central Committee, two Leningrad writers, Anna Akhmatova and Mikhail Zoschenko, were expelled from the Union of Soviet Writers for alleged addiction to "alien ideologies," and the President of the Union, Nikolai Tikhonov, was dismissed and replaced by a governing board composed of Tikhonov, A. Fadeyev, Konstantin Simonov, V. Vishnevsky, and Alexander Korneichuk. Future membership in the Union was to be limited to writers who "stand on a platform of Soviet power and participate in socialist construction." Zhdanov warned writers to shun and expose bourgeois culture, with its penchant for gangsters and sex themes, to refute attacks on Soviet culture, and to dedicate themselves to creating an advanced Soviet literature. Simonov wrote in November that "playwrights must be politicians," devoted to an "active and relentless" offensive against ideological enemies.

This campaign of intolerance and dynamism in the arts was paralleled by an intensive drive against those in government, industry, and agriculture who fell short of the standards of probity, competence, and socialist enthusiasm insisted upon by the Kremlin. On June 26 the Ministry of State Control announced, with circumstantial details, widespread dismissals and fines for factory directors, engineers, and accountants who had falsified production figures, distributed bonuses illegally and misappropriated funds. In mid-summer several Party officials in the Crimea were expelled for indifference to the

needs of new settlers, brought in to replace the deported Tatars who had collaborated with the German invaders. Krushchev announced on August 23 that over half of the Party leaders and local government executives in the Ukraine had been replaced in the course of 18 months. Symptoms of "bourgeois nationalism" in the Ukraine evoked vigorous condemnation.

On September 20 a decree issued jointly by the Council of Ministers and the Party's Central Committee condemned thefts of collective farm property, "swollen administrative staffs" on many collectives, undemocratic methods of management, and other violations of collective farm statutes. Expulsions and prosecutions for graft ensued, particularly in the Ukraine. In October two officials of the tailoring cooperative of the Moscow oblast were sentenced to be shot for wholesale stealing and reselling of cloth, with eight others given prison sentences. Later in the month a new federal Council for Collective Farm Affairs, headed by Andreyev, was charged with defending farmers against abuses by local authorities and increasing discipline and productivity on the collectives. I. M. Slatin, Vice-Minister for Industrial Crops, was dismissed on October 30 for overloading his staff with excess workers. By the end of the year a nationwide campaign was in full swing against swindlers, thieves, parasites, and those charged with hoarding labor power and impeding the transfer of personnel from bureaucratic posts to industry.

**War Criminals.** In late January, 15 Germans were brought to trial in Kiev, charged with participating in the burning of 647,000 houses, the enslavement of 2,000,000 persons and the murder of 4,000,000 Ukrainian civilians. The testimony of witnesses and the confessions of the accused revealed that the Nazi occupants of the Ukraine had pursued a systematic policy of slaughtering Jews, killing children, murdering scores of thousands of war prisoners, torturing and burning alive civilian suspects, and promoting famine and pestilence in a well-organized program of extermination. On July 20 Soviet authorities in Berlin informed U.S. Army headquarters that Fred W. Kaltenbach, missing American traitor who had broadcast on the Nazi radio, had died in October, 1945, in a Soviet detention camp. The Nuremberg verdicts on the major Nazi war criminals were hailed by the Soviet press and public with general satisfaction, tempered by regrets at the acquittal of Schacht, Papen, and Fritzsche and the life sentence for Hess.

The Nuremberg trial produced several alleged revelations regarding Nazi-Soviet relations in 1939-1941. Ribbentrop's secretary, Margaret Blank, testified on March 28 that Molotov and Ribbentrop had signed a secret territorial agreement in Moscow in August, 1939. On March 19, 1946, the *New York Times* published an article from Frankfurt-on-Main by L. S. B. Shapiro, asserting that captured German documents showed that Molotov had made a secret visit to Berlin in May, 1941, to make a vain offer of a full military alliance in return for Soviet control of the Dardanelles, a free hand in Iran and Iraq, and enough of Saudi Arabia to insure control of the Persian Gulf and the Gulf of Aden. This tale was confirmed from no other source and appears highly implausible. Such stories were used throughout the year in the United States as "evidence" of a long-term Soviet program of aggrandizement in the Near and Middle East. Most of them were comparable in veracity to the *New York Times'* sensational dispatches of the spring reporting extensive Soviet troop movements in Iran, Bulgaria, and Germany.

Soviet spokesmen continued to protest at the Anglo-American policy of refusing to deliver up displaced persons of Eastern European origin in German and Austrian camps. These included many of the renegade troops of Lt. Gen. Andrei A. Vlassov's Nazi-supported "Russian Army of Liberation" which, on German orders, committed atrocities in Yugoslavia and southern France in 1943-44. On March 1 it was reported from London that a secret military clause in the Yalta accords obligated the United States and Britain to turn over to the Russians, as deserters, all captured East Europeans who had actually served in the Axis armies. Moscow contended that even this limited promise was not being fulfilled and that Anglo-American policy was one of protecting Fascists, Quislings, and traitors.

Vlassov himself had fallen into American hands in Czechoslovakia and had been surrendered to Soviet authorities. On August 2 the Moscow radio reported that he and ten of his aides had been hanged after being found guilty of treason by the Supreme Court. In a public trial before the same tribunal, Ataman Gregory Semenov, the successor of Kolchak as White Guard leader in Siberia in 1920 (and captured by the Red Army in Manchuria in 1945), testified that he had plotted to kill Lenin, accepted Japanese money, trained anti-Soviet spies and terrorists, and organized massacres in the final phases of the war of the intervention. He and five associates were executed on August 31.

**Demobilization.** The process of demobilization begun in 1945 (see YEAR BOOK for 1945, p. 616) continued during 1946. The Danish island of Bornholm was evacuated on April 5. By June, Soviet forces in Germany, Austria, Hungary, Rumania, and Bulgaria had been sharply reduced, with a total of 10,000,000 Soviet soldiers returned to civilian life. Thirteen senior age groups were released under the law of June 23, 1945, and ten more on September 9. A third demobilization decree of March 20, 1946 was followed by a fourth on October 22. Churchill charged in Commons on October 24 that there were 200 Soviet divisions on a war footing in occupied Europe. On October 28, in answer to questions put from London by Hugh Baillie, President of the United Press, Stalin described Churchill as an "incendiary of a new war" and asserted that there were only 60 Soviet divisions in the West, most of them not in full strength, and that only 40 would remain by January. On November 15, Marshal Rokossovsky signed an agreement with Marshal Rola-Zymierski for the reduction of Soviet troops in Poland.

Although demobilization was speeded as a means of meeting the grave labor shortage afflicting Soviet economy, the men of the Kremlin had no thought of reducing Soviet military power to a point which might jeopardize national security. On February 23, 28th anniversary of the founding of the Red Army (officially renamed the "Soviet Army" on September 20), Stalin enjoined it "not only to keep up with progress in the art of war, but to advance it." His Order of the Day of May 1 declared: "Returning to peaceful work, we must constantly be alert to look after the armed forces in defense of our country."

On June 19, a new disciplinary code was announced. It was designed to contribute "to the still greater military might of the Soviet State" and called for scrupulous regard to military etiquette; vigilance against thefts, wastes, and "leaks" of military secrets; and emphasis on high standards of conduct among officers, to be enforced through courts of honor. *Red Star*, organ of the Army, as-

serted on June 22 that the Soviet forces were "the mightiest and toughest of contemporary armies." Historian Eugene Tarlé warned against incipient Fascism in the United States and schemes of a *Tax Americana*. The Soviet press continued to stress military technique. Plans for a greater Soviet Navy were pressed. On Aviation Day (August 18) the new models displayed in the Moscow demonstration included jet-propelled and rocket-propelled fighter planes. By the end of the year it was estimated, without official confirmation, that the armed forces had been cut to less than 6,000,000 and would be further reduced to a peacetime norm of 3,000,000.

**Problems of Agriculture.** In the Soviet Union, to an even greater degree than in Britain, France and the lands of the vanquished, daily life for the masses was hard and austere beyond American imagination. On February 9 Stalin promised that "in the very near future the rationing system will be abolished." But on August 28 the Moscow radio announced that "in view of drought in a number of regions and the diminution of State food reserves," rationing would have to be continued into 1947. One source of difficulty, apart from the weather, was that collective farmers during the war had found, in the free market sales of produce at high prices, an incentive for extending their personal holdings for garden purposes and were devoting more time to them than to collective agriculture. The wholesale destruction of tractors, tools and livestock in the devastated areas, coupled with the labor shortage, contributed to the scarcity of marketable foodstuffs.

In order to relieve want in the cities, substantial reductions of rationed food prices were ordered on February 25. On March 20 William L. Clayton, addressing the UNRRA Council in Atlantic City, opined that recent reports of Soviet willingness to sell 400,000 tons of wheat and 100,000 tons of barley to France indicated that the U.S.S.R. might soon be able to join other suppliers in meeting UNRRA needs. But on June 25 Marshall MacDuffie, chief of the UNRRA mission to the Ukraine, reported that drought had damaged crops. The Ukraine remained a recipient, not a supplier, of UNRRA and secured \$189,000,000 worth of foreign relief by the end of the year. Federal Minister of Agriculture, I. A. Benediktov, early in August predicted a bumper crop. But by December the Ukraine, the Moldavian and Kazak Republics, and the R.S.F.S.R. had not completed their scheduled grain deliveries.

Aside from disciplinary measures already noted, the authorities sought to meet the farm problem by altering price levels. On September 16 lowered prices, representing the third cut of the year, went into effect in the "commercial stores," where goods were sold without ration cards. At the same time prices of rationed foods were raised: bread from 1 to 3.40 rubles, butter from 24 to 60, sugar from 5 to 60, meat from 14 to 34, etc. The effect was to increase living costs for urban workers, encourage larger production by the collectives, and reduce incentives to private cultivators whose price standards in the peasant markets were set by the commercial stores. A decree of the Council of Ministers, November 9, contemplated a reorganization and expansion of the consumers' and producers' co-operatives in order to increase the volume of produce and merchandise and to provide "healthy competition" for the commercial stores. The net results of these and other measures could not at once be estimated accurately, but they promised a gradual alleviation of the chronic poverty in con-

sumers' goods which had been aggravated by the appalling ruin and waste of war.

**Industry.** When asked by Hugh Baillie (October 28): "How long will it require to rebuild the devastated areas of Western Russia?" Stalin replied "Six or seven years, if not more." It had been hoped earlier that the task might be completed by 1950 and that industrial output at the end of the Fourth Five Year Plan might be 50 percent greater than in 1940. The Plan was finally adopted by the Supreme Soviet on March 18. Among major proposed achievements, it contemplated the following increases of production by 1950, as compared to 1940 in millions of tons, with tentative estimates for 1960 shown in parentheses in the accompanying table.

Pig-iron . . . . .	from 15 to 19	(60)
Steel . . . . .	from 18 to 25	(50)
Coal . . . . .	from 166 to 250	(500)
Oil . . . . .	from 31 to 35	(60)

Owing to the complete destruction of at least one-third of Soviet industrial facilities in the invaded regions, the actual production of pig-iron in 1946 was only ca. 11 million tons and of steel ca. 15 million tons. Even should the high goals of the Plan be attained, Soviet production in heavy industry, despite a far greater territory and population, would still be far below American capacity. The United States produced 31.4 million tons of pig-iron in 1913 and 55 million tons in 1944; 32 of steel in 1913 and 80 in 1944; 517 of coal in 1913 and 616 in 1944; and 34 of oil in 1913 and 206 in 1945.

Soviet reconstruction and further industrialization were severely impeded by lack of labor power, particularly as to skilled workers, by high costs and inefficiency, and by general backwardness in the fields of industrial construction, farm machinery, timber, chemicals, consumers' goods and coal mining. At the beginning of the year the eight-hour day in industry had been restored and allowances of rationed foodstuffs were considerably increased. The new Plan contemplated the technical training of 7,700,000 new workers by 1950 and the acquisition of new skills by an additional 13,900,000. *Trud*, organ of the trade unions, reported on April 6 one of the rare instances of strikes in the U.S.S.R.: because of the failure of directors in an unidentified plant to provide better working conditions, the Electrical Workers Union had ordered a temporary work stoppage. In the face of staggering difficulties, appreciable progress was made in 1946 in restoring production. Examples: the Dnieper Dam resumed power production in December. Output of food and consumers' goods finally exceeded slightly the 1940 levels. Daily freight car loadings increased by 6,000 cars a day from August 1, 1945 to August 1, 1946. The coal mines and steel plants of the Don Basin, completely devastated during the war and reduced to half of its former population, reached almost half of their pre-war output.

Intensive efforts were made to recruit new industrial workers, to attract "white collar" employees to farms and factories, to combat incompetence and graft, and to remedy the deplorable state of the housing and food industries. A reconstruction loan of 20 billion rubles was floated on May 3, with the 20-year bonds paying no interest but offering lottery prizes for one-third of the bonds issued, ranging up to 50,000 rubles on 100 ruble bonds. *Pravda* warned on October 19 that the success of the new budget would depend on the liquidation of industrial inefficiency and the attainment

of production goals. "Self-criticism" and public attacks on bureaucratic bunglers in industry lent sharpness to the campaign for greater output. By American standards, poverty was the lot of the mass of Soviet citizens and would remain their lot for years to come. But there was no fear of boom-and-bust, nor of prospective stagnation and unemployment. The vision of ultimate plenty moved a weary but confident people to new efforts which promised fulfillment of the Plan.

**Church Affairs.** By the autumn of 1946 there were 22,000 Orthodox congregations actively functioning in the U.S.S.R., one Patriarch (Alexei), seven Metropolitans, 75 Archbishops and Bishops, 10 seminaries, 3 theological academies and 83 monasteries. An extensive three-week tour of the Soviet Union was made during the summer by an American delegation which included Dr. Ralph W. Sockman, Minister of Christ Church (Baptist) of New York; Rev. Louie D. Newton, President of the Southern Baptist Convention; Mrs. LaFell Dickenson, President of the General Federation of Women's Clubs; Peter Grimm, President of the New York State Chamber of Commerce; Louis Levine; Dr. Edward L. Young; and Fred Myers, now Director of the American-Russian Institute. After visiting many churches and preaching in some, Drs. Sockman and Newton reported that church membership was growing and that "as far as we could see, no obstacles are interposed by the Soviet Government which would prevent the free growth of religious institutions or the right of individuals to pursue their faith and worship as they please."

On March 17 Radio Moscow announced that the Uniate Church of the Western Ukrainians had decided on the 8th, meeting in assembly in Lvov, to break its union with Rome (1596) and rejoin the Russian Orthodox Church. This step followed Vatican condemnation of Soviet "persecution" of Catholics in the Ukraine. Papal spokesmen declared that the decision was the work of renegade priests, that the legitimate Bishops had been arrested, and that Patriarch Alexei, "elected by dissident Bishops," had backed the move. Kremlin-Vatican relations, already embittered, went from bad to worse. *Izvestia* (January 27) declared that the Holy See, in naming 32 new Cardinals, was seeking to spread "reaction" throughout the world. Cardinal Spellman was accused of befriending Franco. A month later *Pravda* charged that Pope Pius XII had been pro-Nazi during the war and had reached an agreement with Hitler under which Roman priests followed the Wehrmacht, the Gestapo, and the S. S. into Russia to convert the population to Catholicism. In various articles and speeches during the year Cardinal Spellman echoed the Vatican in denouncing Communism. Between the Papal Hierarchy and the "Third Rome" no peace was achieved nor was any in prospect.

**Foreign Policy.** In world affairs Soviet leaders were primarily concerned with consolidating the fruits of victory and counteracting what they regarded as pressures and threats from London and Washington. The tortuous negotiations and recurrent crises which marked the meetings of General Assembly, Security Council, Council of Foreign Ministers, and Paris Peace Conference cannot here be reviewed Suffice it to say that from the perspective of Moscow nothing vital to Soviet security was surrendered during the year, despite many concessions to and compromises with the Western Powers. Rumors of war, loudly voiced during the winter and spring, gave way in fall to talk of peace and new hopes of concord among the Big Three.

Churchill's speech in Fulton, Missouri (March 5) was denounced by *Pravda* on March 11 as a threat of aggression. Two days later Stalin called it "a dangerous act" by "a firebrand of war." Should he and his friends succeed "in organizing a new military expedition against Eastern Europe," then "one man confidently says that they will be beaten, just as they were beaten 26 years ago." In his May Day statement, Stalin celebrated victory over Fascism, espoused peace and warned against "the intrigues of international reaction, which is hatching plans of a new war." The painful elaboration of draft treaties in Paris during the spring alleviated tension. The crucial issue of Trieste was compromised. The settlements finally concluded for Italy, Finland, Hungary, Rumania, and Bulgaria fixed reparations and frontiers and provided for evacuation of Allied troops, but did not alter the fact of Soviet hegemony in the Danubian and Balkan lands.

Stalin wrote to Alexander Werth on September 24 that he did not believe in "a real danger of a new war," nor in the possibility of a "capitalist encirclement" of the Soviet Union by ruling circles in Britain and the United States "even if they wanted to do this, which, however, we cannot affirm." He declared that all accusations that Western European Communist parties were following policies dictated by Moscow were "absurd and borrowed from the bankrupt arsenal of Hitler and Goebbels." "I do not doubt that the possibilities of peaceful collaboration (with the Western Powers) will not only not decrease but can even increase. 'Communism in one country' is fully possible, especially in such a country as the Soviet Union." On October 28 Stalin cabled Hugh Bailie that he did not agree with Byrnes that there was growing tension between the U.S.S.R. and the United States of America; that the major threat to world peace was "the incendiaries of a new war, foremost Churchill and those who think like him"; that Russia considered the Western frontiers of Poland as permanent; and that the political and economic unity of Germany should be restored.

Soviet commercial policy in Central and Eastern Europe led to repeated clashes with Washington, which championed multilateralism in contrast to Moscow's preference for bilateral trade agreements. American efforts to minimize Soviet influence in the economies of Poland, Czechoslovakia, Hungary, Rumania, Yugoslavia, and Bulgaria were not conspicuously successful. In July negotiations were opened for a Swedish-Soviet accord by which Stockholm would extend credits of a billion kronor for Soviet purchases of Swedish electrical equipment, machinery, and other goods over a period of five years. Widespread reports of "ghost rockets" flying over Sweden during the discussion, presumably indicating Soviet pressure on Stockholm, were dismissed on September 16 by Dr. Carl Siegbahn, Sweden's leading physicist, as "hysteria" aroused by meteorites. The credit agreement was signed in Moscow on October 7 on terms of 15 years at 3 percent. Both Moscow and Stockholm rejected American protests.

The major issue of 1947 between Muscovy and the West, i.e. the future of Germany, was clearly posed in 1946. Molotov told the Council of Foreign Ministers on July 10 that he repudiated all thought of any dismemberment or deindustrialization, that he favored the economic and political unification of the Reich, but that he opposed a federal structure and felt that no treaty could be completed until it was clear that a new democratic German Government would "extirpate the remnants of Fascism" and insure fulfillment of obligations toward the Al-

lies, including reparations deliveries. In late July Molotov expressed disapproval of Anglo-American plans for the economic merger of the British and American zones, contending that this represented a "back-stairs agreement" aiming at "a revival of the economic might of the aggressive forces of German imperialism" (the Moscow radio, August 5).

In reply to Byrnes' Stuttgart address of September 6, Molotov insisted that Germany's frontier on the Oder and Niesse was fixed and final. Stalin on September 24 warned against all efforts by West or East to use Germany against the other. *Pravda* (on October 6) echoed the Foreign Ministry in rejecting Byrnes' plan for a 40-year Four Power Pact guaranteeing German demilitarization, contending that this had already been agreed upon at Potsdam and only remained to be carried out. In December, however, it was agreed that the Council of Foreign Ministers should meet in Moscow on March 10, 1947 to consider treaties with Austria and Germany.

**The Far East.** In Asia, as in Europe, Soviet policy was motivated, in the Muscovite view, by considerations of military security, and was widely interpretative in the West as indicative of a program of aggrandizement. With the Japanese threat removed, Moscow was determined that it should neither be revived nor replaced by new dangers arising out of American support of anti-Soviet elements in Japan, Korea, and China. A *Tass* dispatch of January 19 from Heijo spoke of "the provocative activity of the counterfeit government of Kim Koo and Syngman Rhee" and accused United States authorities in southern Korea of permitting anti-Soviet propaganda and "inspiring reactionary demonstrations against the decisions of the Moscow Conference." On January 23 Gen. MacArthur's headquarters rebuked *Tass* and charged "a definite program to discredit" the Supreme Commander and force changes in occupation policy. Gromyko represented the U.S.S.R. on the new Far Eastern Commission which met for the first time in Washington on February 20, after returning from Tokyo. No open clashes were reported in the course of its deliberations, but the Soviet press and Soviet officials in Japan remained consistently critical of American policy, holding that it was directed against liberal forces and favored elements identified with feudalism, monopoly capitalism, and militarism.

On January 29 Byrnes confirmed reports of September, 1945, that Roosevelt and Churchill at Yalta had signed a secret accord with Stalin whereby they agreed that, in return for Soviet entry into the war against Japan "in two or three months after Germany has surrendered" and the conclusion of a Soviet-Chinese treaty of alliance to aid in "liberating China from the Japanese yoke," they would assent to preservation of the *status quo* in Outer Mongolia, restoration to Russia of Southern Sakhalin and the Kurile Islands, joint Sino-Soviet operation of the Manchurian railway, internationalization of Dairen, and conversion of Port Arthur into a Soviet naval base (text in *New York Times*, February 11, 1946). Despite reports abroad to the contrary, the first American correspondents to fly over the Kuriles in mid-April found them to be unfortified. Southern Sakhalin was integrated into the Soviet economy during the year and settled by Russian immigrants from Siberia. Under an American-Soviet agreement of November, some 25,000 Japanese citizens in Sakhalin, Korea, Manchuria and Siberia were permitted to move to Japan. Gradual repatriation of war prisoners in Soviet

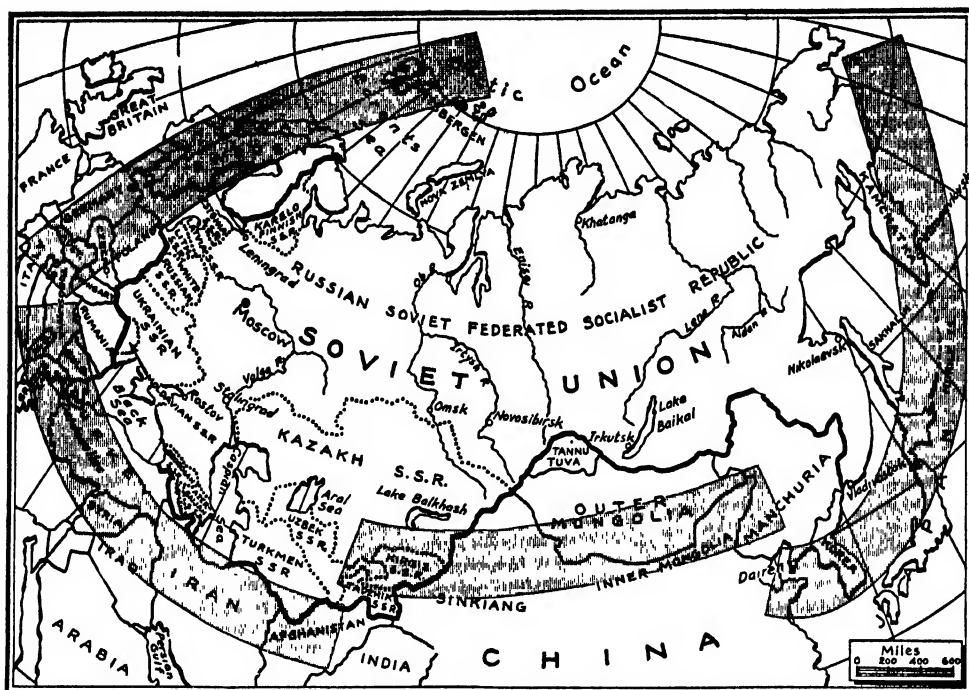

hands, long insisted upon by the United States under the Potsdam agreements, was also under way by autumn.

Soviet policy in Manchuria meanwhile evoked protests from Nanking and Washington. Soviet troops were originally scheduled to withdraw by December 3, 1945. Several extensions were agreed to, in part because of Kuomintang fears that Nationalist forces, despite United States transport by sea and air, would be unable to take over in advance of Chinese Communist forces. Moscow pressed for additional economic concessions in Manchuria while Soviet troops made wholesale removals of machinery and other supplies described as "war booty" and reparations. On February 9 (text in *New York Times* on March 6) Byrnes informed the U.S.S.R. and China that the United States took the view that joint Sino-Soviet control of Manchurian enterprises was to be limited to railways, that any extension of such control would be "contrary to the principle of the Open Door and would constitute clear discrimination against Americans," and that no disposition of Japanese assets should be made until an inter-allied reparations commission for Japan should be established to work out a final allocation among the various claimants.

Maj. Gen. Andrei Kovtoun-Stankevitch asserted in Mukden on February 23 that removals had been sanctioned by a Big Three accord. Byrnes denied knowledge of any such agreement. Moscow rejected American and British protests at the continued presence of Soviet forces in Manchuria on the ground that China had requested that departure be delayed. But on March 22, in reply to a Chinese request of March 6 for withdrawal, Moscow informed Chungking that all its troops would be out by the end of April.

This promise was kept, save for Soviet garrisons in Dairen and Port Arthur. But a large proportion of the Japanese industrial establishments had been dismantled. Most of Manchuria, moreover, passed into the hands of Chinese Communist forces. Aside from this circumstance, Moscow gave no material aid to Yen-an, even though the United States extended large-scale assistance to the recognized Kuomintang Government in the civil war which Gen. Marshall as mediator was unable to halt. *Pravda* charged on July 7 that the United States was violating the Moscow Conference agreement on non-interference in China's internal affairs and was "pouring oil into the fire." Other Soviet publicists held that the United States was responsible for the Chinese civil war and that the Kremlin was not indifferent to the course of events. When asked by Alexander Werth on September 24, "Do you believe that the quickest withdrawal of all American forces in China is vitally necessary for the future of peace?" Stalin replied: "Yes, I do." American intervention continued, but the inability of Chiang Kai-shek's forces to win any decisive victory over their foes during the year contributed to the Soviet decision to refrain from counter-intervention.

**The Near East.** The diplomatic duel between the Soviet Union and the Atlantic powers eventuated in a situation in the Near Eastern arena which was, on the whole, less favorable to Moscow at the close of the year than it had been in January. When Iran on January 19 charged the U.S.S.R. before the Security Council with interfering in its internal affairs by refusing to permit Teheran troops to suppress the autonomous regime in Azerbaijan, Gromyko and Manuilsky retaliated by charging that British troops in Greece and Java

#### SHADED ARCS SHOW APPROXIMATE LINE OF RUSSIA'S DEFENSES

were a threat to peace. The Council resolution of January 30 kept the Iranian dispute on the agenda. When Soviet forces remained in Northern Iran beyond the deadline of March 2, the United States informed Moscow (March 6) that it regarded this act as a breach of assurances and hoped for immediate evacuation. The prolonged and embittered controversy over Iran, which began with the Council meeting of March 25, continued through the spring, with Iran's complaints still on the agenda at the end of December.

Moscow contended that the issue was one to be settled by bilateral negotiations, that the Security Council could not properly consider it, particularly after Iran had requested its removal from the agenda, and that the controversy had in fact been settled by an agreement of March 24 under which all Soviet troops would be withdrawn. The latter development was completed by May 6. The *quid pro quo* was a Soviet-Iranian accord, embodied in an exchange of notes between Premier Ghavam and Ambassador Sadchikov on April 8. It provided for the formation of an Iranian-Soviet oil company to explore and develop the petroleum resources of Northern Iran over a period of 50 years, with the allocation of the shares between the U.S.S.R. and Iran to be 51-49 for the first 25 years and 50-50 thereafter. Teheran agreed not to grant oil rights in the area to others. The accord was to be implemented after the election of a new Iranian parliament and in any case not later than seven months after March 24, 1946.

The effect of this settlement would have been to give the U.S.S.R. a position of prospective equality with Britain and the United States in the development of Iranian oil reserves. The Anglo-Iranian Oil Company and Royal Dutch Shell already possessed exclusive rights in Central and Southern Iran. Standard of New Jersey and Socony Vacuum ob-

tained rights of participation in the British monopoly in December. But the seven months elapsed without action by Teheran. In October Ghavam dropped from his Cabinet the adherents of the pro-Soviet Tudeh party. In November, with American encouragement and over the objection of Ambassador Sadchikov, he decided to send troops into Azerbaijan for the purpose of supervising elections. On December 11 the pro-Soviet autonomous regime in Azerbaijan was suppressed. By year's end it appeared that the impending elections might be followed by the repudiation of the oil agreement of April and by unchallenged domination of the kingdom by Anglo-American interests. Whether Moscow would risk a new clash with London and Washington by contesting this outcome remained to be seen.

With Afghanistan, Moscow concluded a border agreement on June 13. In return for giving up all claim to the Kushka district in southern Turkmenistan, Kabul received water rights on the Kushka River. Certain circles in London interpreted the accord as a Soviet encroachment into a British sphere of influence. As regards the Arab portions of the Moslem world, Soviet spokesmen repeatedly criticized British and American policy and urged that Palestine be dealt with as a problem for the United Nations. Rumors of an anti-British liaison between the Kremlin and the Arab League came to nothing, since the greatest long-run threat to the feudal élites of Islam came not from Zionism nor from Britain but from the example of the U.S.S.R., where millions of Moslem peasants had been emancipated from the feudal exploitation, illiteracy, disease, and subhuman misery afflicting most of their coreligionists south of the Soviet frontier.

Continued Soviet efforts to bring about a change in the status of the Straits remained unsuccessful. The April visit of the U.S.S. *Missouri* to Istanbul

was interpreted in the Soviet press as American support to Turkey in resisting Soviet proposals. On August 7 Moscow made a formal request for revision of the Montreux Convention and urged that the future regime of the Straits be regulated exclusively by the Black Sea States, with Turkey and the Soviet Union assuming joint responsibility for defense against any attack from the Mediterranean. On September 24, in reply to a Turkish note of the 22nd rejecting its proposals, Moscow complained of Anglo-American military influence in Turkey and warned Ankara against "organizing military measures in the Straits together with any non-Black Sea Power."

A United States note to Moscow of October 11 reiterated American willingness to participate in a general conference to revise the Montreux Convention and championed exclusive Turkish defense of the Straits, adding that any attack or threat by an aggressor should be "a matter for action on the part of the Security Council." Thus encouraged, Turkey rejected the Soviet proposals once more on October 18. David Zaslavsky in *Pravda* (October 20) wrote that the Turkish attitude was the product of "extremely crooked, secret negotiations" between Ankara and Washington. British notes to Moscow of August 21 and October 9 also rejected the Soviet proposals.

**Relations with Britain.** Soviet negotiations with the English-speaking Powers during 1946 were marked by bitter recriminations and successive crises during the spring and summer, followed by substantial progress in peace-making in the autumn. If the results seemed to many Britons and Americans to represent a successful challenge to Soviet "imperialism" and "expansionism," it appeared to most Soviet citizens to constitute a welcome diminution of Western threats of a new "crusade against Bolshevism."

Soviet relations with the British Commonwealth were complicated by extensive arrests and trials in Canada, beginning in mid-February, of participants in a "Soviet spy-ring," first exposed by Igor Gouzenko, a former staff member of the Soviet Embassy. Moscow admitted that its agents had obtained secret arms data during the war and said that the responsible military attaché (Col. Nikolai Zabotin) had been recalled, but denounced Gouzenko as a thief and accused the Canadian Government of ulterior motives and of launching "an unbridled anti-Soviet campaign." *Pravda* asserted (February 21) that Mackenzie King was seeking to cover up Bevin's diplomatic failures.

The British Foreign Secretary, whose proposal to extend the 20-year Anglo-Soviet alliance of 1942 to 50 years evoked no Soviet enthusiasm, remained the *bête noir* of the Soviet press. Tension was increased by reports in the fall of secret Anglo-American agreements for arms standardization and military cooperation, but was somewhat alleviated by the completion of the draft treaties with the Axis satellites and by Viscount Montgomery's visit to Moscow in mid-winter.

**Relations with the United States.** If the Soviet Union impressed most Americans throughout the year as a dark citadel of totalitarianism, menacing to peace and freedom, the United States impressed Red Muscovy as a stronghold of reaction and anti-Soviet intrigue, using "dollar diplomacy" and "atomic diplomacy" to threaten Soviet safety and prepare for World War III. Suspicion begot suspicion. Soviet anxiety regarding American intentions was enhanced by the utterances of the Hearst press, Cardinal Spellman, John Foster Dulles, William C. Bullitt, Winston Churchill, George H. Earle,

Clare Boothe Luce, J. Edgar Hoover, Victor Kravchenko, John Stelle and a host of other publicists. Soviet-American trade nevertheless reached an all-time high, amounting to \$219,113,000 worth of American exports to the U.S.S.R. and \$56,894,000 worth of Soviet exports to the United States during the first half of the year.

Official diplomatic relations remained "correct." Gen. Walter Bedell Smith replaced Averill Harriman as United States Ambassador to Moscow on February 14. Nikolai Novikov replaced Gromyko as Soviet Ambassador to Washington on April 10. President Truman asserted on May 30 that he had twice invited Stalin to visit the United States but that the Prime Minister had declined for reasons of health. Molotov made a friendly social call on the President in the White House on November 7. The Truman-Byrnes-Vandenberg policy of "patience and firmness," however, was viewed with jaundiced eyes by the men of Moscow.

Apart from controversies dealt with elsewhere, the following developments were newsworthy. On March 1 the State Department announced that it had invited Moscow to open negotiations for a credit of \$1,000,000,000, noting that the original Soviet request for a loan had been "misplaced" in Washington for six months. Stalin expressed continued interest in a loan in November, but in spite of intermittent discussions no agreement was reached, apparently because of Soviet unwillingness to modify trade policies in Eastern Europe and commit itself to membership in the World Bank and Fund and in the projected World Trade Organization. American insistence on a broadening of the Bulgarian Government provoked sharp Soviet criticism in March which in turn led to counter-charges by Byrnes and further wrangling over Bulgarian elections in the autumn. Among the episodes promoting friction was the arrest in Portland by the F.B.I. on March 26 of Naval Lt. Nikolai G. Redin on a charge of espionage. The State Department rejected Moscow's plea that the charge be dropped. Redin was indicted by federal grand jury in Seattle early in April, but was judged innocent on July 17 and released. He expressed gratification at the fairness of his trial. *Pravda* compared the F.B.I. to the Tsarist Okhrana and accused it of plotting against American-Soviet amity.

Travel and communication between the two countries was a troubled adventure in understanding and misunderstanding. In mid-March a C.I.O. delegation which had visited the Soviet Union late in 1945 issued a sympathetic report, urging co-operation and increased trade. Censorship troubles in Moscow and the Soviet expulsion from Rumania in June of Reuben H. Markham of the *Christian Science Monitor* irked American pressmen and diplomats. In the spring Ilya Ehrenburg, Konstantin Simonov and Maj. Gen. Mikhail Galaktionov spent two months traveling in the United States at the invitation of the State Department and later reported their observations in the Soviet press. Ernest C. Ropes and Lewis L. Lorwin of the Department of Commerce visited Moscow in July and reported that the U.S.S.R. would buy two billion dollars worth of American goods if credits were extended. When a group of Russian and Ukrainian artists and writers, sent as delegates to the All-Slav Congress in New York, were required in October to register as foreign agents, they cut short a concert and lecture tour and went home aggrieved. Ambassador Smith and Alexander D. Fortushenko, Deputy Minister for Communications, signed on May 24 the first bilateral American-Soviet communications agreement, providing for the estab-

lishment of two-way radio and teletype channels between the two countries. But on October 8 the Foreign Ministry denied broadcasting facilities to foreign correspondents in Moscow, including Richard Hottelet of CBS, Edmund Stevens of ABC and Robert Magidoff of NBC. Despite appeals for reconsideration, the ban was made permanent on November 19.

Much comment was aroused by the May visit to Moscow of Earl Browder, deposed leader of the American Communist Party. The visit appeared to be without political significance, however, except that Browder's cordial reception by Molotov, Lozovsky, and other officials indicated that he was still *persona grata* to the Kremlin, in spite of, or perhaps because of, his espousal of democratic capitalism rather than proletarian revolution. He returned in June with a 5-year contract as United States representative of all Soviet publishing houses. Further perturbations attended the return of Brooks Atkinson, Moscow correspondent of the *New York Times* from August 1945 to May 1946. His articles in July, accusing the Soviet Union of totalitarianism, artistic sterility, enmity toward America, and designs for world domination led to his reception by President Truman and caused David Zaslavsky in *Pravda* (July 11) to call him an "informer," "commercial traveler," "liar," "slanderer," and "pen bandit." During the second half of the year Atkinson's successor, Drew Middleton, supplied *Times* readers with numerous informative articles on Soviet economic developments.

Press and public in the U.S.S.R. followed with mingled hope and fear the events which led to the dismissal of Henry A. Wallace from the Cabinet on September 20, after his public criticisms of Byrnes and Baruch for their alleged "get-tough-with-Russia" policy. Soviet commentators viewed with concern the Republican victory in the Congressional elections and expressed no confidence that the resignation of Baruch and Byrnes at the turn of the year would necessarily improve Soviet-American relations. In December Elliott Roosevelt, who largely shared Wallace's views, visited Moscow, where he championed concord between the two Powers but denied the correctness of a story in *Newsweek* quoting him as having condemned United States foreign policy and having charged that America had broken promises made at Teheran, Yalta, and Potsdam. Soviet pressmen at the opening of the new year were still accusing Washington of offensive designs and of seeking to draw Latin America, Britain, France, Germany, and China into an anti-Soviet bloc.

**Atomic Energy.** Last but far from least on the agenda of American-Soviet dispute was the issue of international control of the atomic bomb. In the United Nations Atomic Energy Commission which met in June, Gromyko countered Baruch's proposal for a world authority and for "condign punishment" of violating States, with no veto in the Security Council, by urging a multilateral treaty for immediate outlawry of atomic weapons and destruction of existing stocks. After six months debate, the U.S.S.R. had accepted the principle of an international authority with powers of inspection unimpeded by any veto, approved the report of the Commission's Scientific and Technical Committee, and abstained from voting on the American control plan which was submitted to the Security Council for further consideration. Moscow reiterated its refusal to accept any plan jeopardizing the rule of unanimity of the Great Powers in any application of coercive measures against sovereign states through the United Nations.

Despite a report early in January by Dr. Raphael Armattee, British anthropologist, that the U.S.S.R. had produced an atomic bomb far more powerful than the American version, Stalin in October said "No" to Hugh Baulhe's question: "Has Russia yet developed its own atom bomb or any similar weapon?" He also referred to his September comment to Alexander Werth: "The atom bomb is meant to frighten the weak-nerved, but it cannot decide the fate of war. . . . Monopolistic possession of the atomic bomb cannot last long and the use of the atomic bomb will be prohibited." Soviet physicists continued intensive work during the year on cosmic rays and were reported to have discovered a new type of disintegration of the atomic nucleus. American physicists, with few exceptions, expressed no doubt of Soviet ability to produce atomic bombs within five years. At the beginning of 1947, however, there was little prospect of American-Soviet agreement on a plan of international control in the absence of major changes in American or Soviet policy.

See names of all other Great Powers and of all European, New Eastern, and Far Eastern States for comment on other aspects of Soviet diplomacy. See also PARIS PEACE CONFERENCE and UNITED NATIONS.

FREDERICK L. SCHUMAN.

**UNITARIANS.** A religious denomination, founded in England in the late 18th century, which holds belief in one God in one person as opposed to the Trinity. Headquarters, 25 Beacon Street, Boston, Massachusetts.

**UNITED BRETHREN.** A term used for three religious denominations in the United States, all originating in the evangelistic movement of William Otterben and Martin Boehm about 1800. The largest body is the Church of the United Brethren in Christ with headquarters in Dayton, Ohio.

**UNITED NATIONS (UN).** The United Nations is an international organization open to all peace-loving nations of the world on the basis of the principle of sovereign equality. The purposes of the United Nations are: (1) to maintain international peace and security, (2) to develop friendly relations among nations, (3) to promote international economic and social cooperation, and (4) to be a center for harmonizing the actions of nations in the attainment of common ends.

The Charter of the United Nations which was drafted at the San Francisco Conference and signed by the representatives of fifty nations on June 26, 1945, came into force on October 24, 1945, when it was ratified by more than two-thirds of its signatories, including China, France, the Soviet Union, the United Kingdom, and the United States.

According to the Charter, there should be six principal organs of the United Nations: a General assembly, a Security Council, an Economic and Social Council, a Trusteeship Council, an International Court of Justice, and a Secretariat.

At the time when the Charter was signed at San Francisco the representatives of fifty nations also affixed their signatures to an agreement on Interim Arrangements which created a Preparatory Commission. The Commission held two sessions, the first session on June 27, 1945, in San Francisco, and the second session from November 24 to December 22, 1945, in London. The Commission prepared the necessary arrangements for the first meetings of the General Assembly, the Security

Council, the Economic and Social Council and the Trusteeship Council, for the convening of the International Court of Justice, and for the establishment of the Secretariat.

The first step in the formal establishment of the United Nations was the convocation of the General Assembly, on which all Member States were represented and without which the other principal organs of the United Nations could not come into being. Consequently the Preparatory Commission convoked the first session of the General Assembly on January 10, 1946.

In the course of the year all the principal organs of the United Nations had been organized and all but one had begun to operate. The first annual session of the General Assembly was divided into two parts, the first part meeting in London from January 10 to February 14, 1946, the second part in New York from October 23 to December 15. The Security Council held its first meeting on January 17 and was in continuous session throughout the year. The Economic and Social Council held three sessions in 1946, the first session from January 23 to February 18 in London, the second from May 25 to June 21 in Hunter College, New York, the third from September 11 to October 3 at Lake Success. The Trusteeship Council was organized on December 14, 1946 and was scheduled to meet not later than March 15, 1947. The International Court of Justice held its first meeting on April 3, 1946 at The Hague. The Secretary-General was appointed on February 1, 1946, and subsequently the Secretariat was organized.

**The General Assembly (First Part of First Session).** The General Assembly consists of all the Members of the United Nations. According to the Charter, the General Assembly may discuss any questions or any matters within the scope of the Charter or relating to the functions and powers of any organ of the United Nations, and may make recommendations on any such questions or matters excepting those of which the Security Council is seized.

Mr. Paul-Henri Spaak of Belgium was elected President of the General Assembly, and the chief delegates of China, France, the Union of South Africa, the Soviet Union, the United Kingdom, the United States and Venezuela were elected Vice-Presidents.

The first part of its first session of the General Assembly was devoted mainly to the initial organizational matters of the United Nations.

The General Assembly established two Procedural Committees: a Credentials Committee to verify the credentials of the representatives, and a General Committee to determine the agenda of the Assembly. The substantive work of the Assembly was distributed to six Main Committees: First Committee, Political and Security; Second Committee, Economic and Financial; Third Committee, Social, Humanitarian and Cultural; Fourth Committee, Trusteeship; Fifth Committee, Administrative and Budgetary; Sixth Committee, Legal. In addition, the Assembly established two Ad Hoc Committees: a Permanent Headquarters Committee and a League of Nations Committee.

Each member of the Assembly has one vote. Decisions of the Assembly on important questions are made by a two-thirds majority of the members present and voting; decisions on other questions are made by a simple majority of the members present and voting.

In all principal organs other than the International Court of Justice, the General Assembly resolved that Chinese, French, English, Russian, and Spanish are to be the official languages of the

United Nations, and English and French the working languages. The official languages of the Court, as set forth in the Statute, are French and English.

**Organizational Matters.** One of the first matters to occupy the attention of the General Assembly was the election of the non-permanent members of the Security Council. On January 12, 1946 the General Assembly elected Australia, Brazil, and Poland for a term of two years; and Egypt, Mexico, and the Netherlands for a term of one year. On the same day the General Assembly, in accordance with Article 61 of the United Nations Charter, elected the eighteen members of the Economic and Social Council. On February 1, 1946 the Assembly, on the recommendation of the Security Council, appointed Mr. Trygve Lie of Norway as the first Secretary-General of the United Nations. Voting independently, the General Assembly and the Security Council, on February 6, elected the fifteen judges of the International Court of Justice, in accordance with Articles 8-12 of the Statute of the International Court of Justice.

**Political and Security Questions.** Upon the proposal of Canada, China, France, the Soviet Union, the United Kingdom, and the United States, the General Assembly established an Atomic Energy Commission which was instructed to inquire into all phases of the atomic problem and make specific proposals: "(a) for extending between all nations the exchange of basic scientific information for peaceful ends; (b) for control of atomic energy to the extent necessary to ensure its use only for peaceful purposes; (c) for the elimination from national armaments of atomic weapons and of all other major weapons adaptable to mass destruction, and (d) for effective safeguards by way of inspection and other means to protect complying States against the hazards of violations and evasions."

The Assembly called upon both members and non-members of the United Nations to cause the arrest of war criminals. It also reminded the members that membership in the United Nations would not be open to the Franco Government of Spain.

**Economic and Social Matters.** Upon the reports of the Second and Third Committees, the General Assembly recommended that the Economic and Social Council should establish a Commission on Human Rights, an Economic and Employment Commission, a Temporary Social Commission, a Statistical Commission, a Commission on Narcotic Drugs, a Demographic Commission, a Temporary Transport and Communications Commission, and a Fiscal Commission.

The Assembly recommended that the Economic and Social Council should bring specialized agencies into relationship with the United Nations and make arrangements for consultation with international and national non-governmental organizations.

The Assembly established a committee to urge upon the States signatory to the UNRRA agreement to make further contributions and to urge upon Members of the United Nations who were not signatories to the UNRRA agreement to join the organization.

The Assembly recommended to the Economic and Social Council that a special committee be instituted for the purpose of preparing a report on the problem of refugees and displaced persons; and asked the Council to place the subject of economic reconstruction of devastated areas on the agenda of its first session.

The Assembly urged all governments and peoples to take immediate and drastic action to con-

serve cereal supplies and to ensure the maximum production of grain in the coming season.

**Trusteeship.** The General Assembly, having considered the report of the Fourth Committee, expressed its regret that the Trusteeship Council could not be brought into being immediately, on account of the fact that no trusteeship agreements had been concluded, although several mandatory powers had declared their intention of concluding such agreements. The General Assembly, therefore, invited the mandatory powers to submit draft trusteeship agreements for approval during the second part of the first session of the General Assembly.

The Assembly drew attention to the fact that the obligations under Chapter XI of the Charter of Members of the United Nations assuming responsibilities for the administration of non-self-governing territories were in no way contingent upon the conclusion of trusteeship agreements or upon the bringing into being of the Trusteeship Council and were, therefore, already in force. It requested members to transmit information on economic, social and educational conditions in non-self-governing territories.

**Administrative and Budgetary Matters.** On the recommendation of the Fifth Committee the General Assembly resolved to fix the salary of the Secretary-General at \$20,000 (U.S.) together with representation allowance of \$20,000 (U.S.) per annum. The first Secretary-General, the Assembly decided, shall be appointed for five years, the appointment being open at the end of that term for a further five-year period.

The General Assembly resolved that the United Nations Secretariat should consist of eight departments as follows: (1) Department of Security Council Affairs, (2) Department of Economic Affairs, (3) Department of Social Affairs, (4) Department for Trusteeship and Information from Non-Self-Governing Territories, (5) Department of Public Information, (6) Legal Department, (7) Conference and General Services, (8) Administrative and Financial Services. The Secretary-General was authorized to appoint Assistant Secretaries-General to head the eight departments and such other officials and employees as were required, and to prescribe their responsibilities and duties.

The Assembly adopted a provisional budget of \$21,500,000 (U.S.) for the financial year 1946, and established a working capital fund of \$25,000,000 (U.S.) to finance the provisional budget. The Assembly directed the Secretary-General to prepare the first and second annual budgets (1946 and 1947), and appointed a Committee on Contributions to prepare a scale for the apportionment of expenses among the Members of the United Nations.

**Legal Matters.** The General Assembly adopted a Convention on the Privileges and Immunities of the United Nations and proposed it for the accession by each member of the United Nations. The Convention contains nine articles. Article 1 provides that the United Nations shall possess juridical personality. Article 2 provides that the United Nations, its property and assets wherever located, shall enjoy immunity from any form of legal process; that the premises of the United Nations and the archives of the United Nations shall be inviolable; that the income and other property of the United Nations shall be exempt from all direct taxes and from customs duties. Article 3 stipulates that the United Nations shall enjoy in the territory of each member facilities with respect to its official communications not less favourable than those accorded by the Government of that member to any other Govern-

ment. Articles 4, 5 and 6 provide respectively that the representatives of members, officers of the United Nations and experts on missions for the United Nations shall enjoy such immunities and privileges as may be necessary for the exercise of their functions. Article 7 provides that the United Nations may issue laissez-passer to its officials. Article 8 provides for the settlement of disputes, and the Final Article for the accession to the Convention.

The General Assembly requested the members of the United Nations to transmit to the Secretary-General for filing and publication treaties and international agreements entered into in recent years which had not been included in the League of Nations treaty series, and to transmit for registration and publication treaties and international agreements entered into after the date of entry into force of the Charter.

**Permanent Headquarters.** The General Assembly resolved that the permanent headquarters of the United Nations should be established in Westchester county, New York, or in Fairfield county, Connecticut, or in both, i.e., near to New York City, and that the interim headquarters should be established in New York City.

A Headquarters Commission composed of representatives of Australia, Uruguay, China, France, Iraq, the Netherlands, the United Kingdom, the Union of Soviet Socialist Republics, and Yugoslavia was set up. The Commission was to make an on-the-spot study and to make recommendations as to the exact location of the permanent headquarters.

**League of Nations.** The Assembly declared that the United Nations was willing to accept custody of the instruments of the League and charge the Secretariat with the task of performing the functions formerly entrusted to the League. In regard to those functions of a technical and non-political character, the Assembly requested the Economic and Social Council to make a survey in order to determine which should be assumed by the organs of the United Nations and which should be entrusted to specialized agencies. In regard to those functions having a political character, the Assembly itself would examine them.

The General Assembly requested the Secretary-General to make provisions for taking over and maintaining the Library and Archives of the League and for completing the League treaty series.

The Assembly set up a small negotiating committee to assist the Secretary-General in negotiating agreements in connection with the transfer of certain assets.

**The Security Council.** The Security Council is charged with the primary responsibility for the maintenance of international peace and security. According to the Charter, the Security Council may investigate any disputes which might threaten the maintenance of international peace and security and may make recommendations on appropriate procedures or actual terms of pacific settlement of such disputes; and it shall determine the existence of any threat to the peace, breach of the peace or act of aggression and may take enforcement measures such as interruption of economic relations and severance of diplomatic relations or action by land, air or sea forces.

The permanent members of the Security Council are China, France, the Soviet Union, the United Kingdom and the United States. The non-permanent members are Australia, Brazil, and Poland for the years 1946 and 1947, and Egypt, Mexico, and the Netherlands for the year 1946.

Each member of the Security Council has one vote. Decisions of the Security Council on procedural matters are made by an affirmative vote of seven members. Decisions on all other matters are made by an affirmative vote of seven members including the concurring votes of the permanent members; provided that a party to a dispute shall abstain from voting in decisions on pacific settlement of the dispute.

In fulfilling its primary responsibility for the maintenance of international peace and security, the Council during the course of the year had considered the following major political questions.

**The Iranian Question.** In a letter dated January 19, 1946 the Head of the Delegation of Iran stated that owing to interference of the USSR in the internal affairs of Iran "a situation has arisen which might lead to international friction." On January 30 the Security Council, "considering that both parties have affirmed their readiness to seek a solution of the issue by negotiation," requested Iran and the USSR to inform the Security Council of the result of their negotiations.

In a letter of March 18, 1946 the Iranian Ambassador to the United States reported continuing interference by the USSR in Iranian affairs. He stated that the USSR was maintaining troops in Iranian territory after March 2, 1946, contrary to the Tripartite Treaty of Alliance of January 29, 1942. After several meetings the Security Council, on April 4, 1946, voted to defer action on the Iranian complaint until May 6, at which time both the USSR and Iran were to report to the Security Council whether the withdrawal of Soviet troops from the whole of Iran had been completed. A proposal by the representative of the USSR, contained in a letter of April 6, 1946, to remove the Iranian question from the agenda of the Security Council, was rejected by the Council on April 23, although the Iranian Ambassador to the United States, in a letter of April 15, had communicated the text of a telegram from his Government withdrawing the Iranian complaint from before the Security Council.

On May 6 the Iranian Ambassador to the United States reported the withdrawal of Soviet troops from Iranian territory with the exception of the province of Azerbaijan. Interference by the USSR in Azerbaijan, the Ambassador stated, made it impossible for the Iranian Government, to determine whether Soviet troops had been withdrawn.

On May 21 the Iranian Ambassador reported that a commission of investigation despatched by the Iranian Prime Minister had found no trace of "Soviet troops, equipment or means of transport," and that according to trustworthy local people Soviet troops had evacuated Azerbaijan on May 6. The Security Council, therefore, voted to adjourn discussion of the Iranian question "until a date in the near future."

**The Greek Question.** On January 21 the Delegation of USSR requested the Security Council to discuss the situation in Greece on the grounds that the presence of British troops in Greece constituted an interference in the internal affairs of Greece and provided a threat to the maintenance of international peace. The points of view of the British and Soviet representatives were heard, and Greece, not a member of the Security Council, was invited to participate in the discussion. Other members of the Security Council also participated in the discussion. On February 6 the President of the Security Council stated that the Council should take note of the declarations made in connection with the Greek question as recorded in the proceedings

of the Council, and consider the matter as closed. The statement was accepted.

**The Indonesian Question.** On January 21 the representative of the Ukrainian SSR drew the attention of the Security Council to the situation in Indonesia, which, it was alleged, created a threat to the maintenance of international peace and security. The representative of the Ukrainian SSR, who was invited to participate in the discussion, proposed on February 13 to set up a commission which should carry out an inquiry on the spot, establish peace in Indonesia and report to the Security Council on the result of its work. The resolution was lost.

An Egyptian proposal that British troops should not be used against the National Indonesian Movement and should be withdrawn from Indonesia as soon as the surrender of Japanese troops had been completed failed to obtain the required number of votes. The matter was thus closed.

**The Syrian and Lebanese Question.** On February 4 the Heads of the Delegations of Lebanon and Syria brought to the attention of the Security Council the presence of British and French troops in Syria and Lebanon. The representative of the United States proposed a resolution stating that the Security Council expressed its confidence that negotiations for the withdrawal of British and French troops from Syria would be undertaken without delay. As the USSR, a permanent member of the Security Council, voted against the resolution, it was considered lost. Nonetheless, the representatives of France and Great Britain, by letters of April 30 and May 1 respectively, informed the Security Council that Great Britain and France had agreed to withdraw their troops from Syria by April 30. By a telegram of May 19 the Syrian Prime Minister confirmed that the withdrawal had been completed during the first two weeks of April.

As regards Lebanon, France agreed to withdraw all but a small group of her troops by August 31. Great Britain agreed to withdraw her troops, except for a small liquidation party, by June 30. In a letter of May 9 the Lebanese Foreign Minister expressed his satisfaction with the outcome of the negotiations.

**The Spanish Question.** By letters dated April 8 and 9, the Polish representative drew the attention of the Security Council to "the situation arising from the existence and activities of the Franco regime in Spain." On April 17 he proposed that the Security Council declare that the existence of the Franco regime endangered international peace and security, and that the Council, therefore, call upon all members of the United Nations to sever diplomatic relations with the Franco government.

The Security Council appointed a Sub-Committee of five to study the Spanish question. On June 6 the Sub-Committee reported that it did not find the activities of the Franco regime to constitute an existing threat to the peace. Such activities, nevertheless, were considered "a potential menace to international peace and security." The Sub-Committee, therefore, recommended that the evidence and reports of the Sub-Committee be transferred by the Security Council to the General Assembly, and that unless the Franco regime was withdrawn the Assembly should recommend that diplomatic relations with the Franco regime be terminated forthwith by each member of the United Nations. A resolution to adopt these recommendations of the Sub-Committee was not carried as a result of the negative vote of the USSR. After further discussion the Security Council finally resolved to "keep the situation in Spain under continuous ob-

servation and maintain it upon the list of matters of which it is seized, in order that it will be at all times ready to take such measures as may become necessary to maintain international peace and security."

**The Greek Question.** By a letter dated August 24 the Foreign Minister of the Ukrainian SSR called the attention of the Security Council to the situation in the Balkans resulting from the policies of the Greek Government which, he considered, constituted a threat to the peace. He requested that the Council consider appropriate measures to eliminate this threat to the peace. The representatives of the Ukrainian SSR and of Greece participated in the discussion of the Ukrainian proposal. The representative of Greece rejected all the charges contained in the Ukrainian proposal, pointing out the smallness of the Greek army in comparison to that of her northern neighbours, recalling the list of frontier incidents provoked by Albania submitted previously by Greece to the Security Council, reiterating that all successive Greek governments since liberation consented to the presence of British troops in Greece, and reminding the Council of the collaboration of Albania with Fascist Italy during the war. On September 5 the representative of the Albanian People's Republic presented his Government's views. By a telegram of September 11 the Minister of Foreign Affairs of the People's Republic of Albania drew the attention of the Council to the situation on the Greco-Albanian frontier resulting from continual provocations by Greek soldiers.

On September 18 the representative of the USSR submitted a resolution charging that aggressive Greek monarchist elements were striving to provoke an armed conflict between Greece and Albania for the purpose of detaching Southern Albania for the benefit of Greece. The resolution, further, cited the persecution of national minorities in Greece, political terrorism, and the presence of British troops in Greece, as factors endangering international peace and security. The representative of the USSR, therefore, requested that the Security Council call upon Greece to put an end to provocative frontier incidents and to the persecution of minorities, and that the Council retain the Greek question on its agenda. The resolution was rejected on September 20.

The Security Council failed to adopt two further resolutions on the Greek situation. The representative of the Netherlands had proposed that the Security Council express its earnest hope that both the Greek and Albanian Governments would do their utmost to stop regrettable border incidents by giving appropriate instructions to their national authorities. The representative of the United States had suggested that the Security Council establish a commission of three individuals nominated by the Secretary-General to investigate "the border incidents along the frontier between Greece on the one hand and Albania, Bulgaria, and Yugoslavia on the other."

The representative of Poland then moved that "the Security Council, having considered the situation brought to its attention by the Ukrainian SSR, decides to keep the situation under observation and to retain it on the list of matters with which the Council is seized." As the resolution was not adopted, the Greek case was considered closed.

**The Balkan Question.** The Acting Chairman of the Greek Delegation, by letter dated December 3, 1946, requested under Articles 34 and 35(1) of the Charter that the Security Council consider the Greek border situation which was leading to fric-

tion between Greece and her northern neighbors. On December 10, the Council placed this question on its agenda, and adopted a resolution inviting the representatives of Greece and Yugoslavia to participate in the discussion without vote and the representatives of Albania and Bulgaria to make declarations.

After considerable debate the Council unanimously decided on December 19 to establish a Commission of Investigation composed of a representative of each of the members of the Security Council for the purpose of ascertaining the facts relating to the alleged border violations along the frontier between Greece on the one hand, and Albania, Bulgaria, and Yugoslavia on the other. The Commission was instructed to proceed to the area not later than January 15, 1947 and to submit its report at the earliest possible date.

**Admission of New Members.** Under Article 4 of the United Nations Charter membership in the United Nations is open to all peace loving nations which accept the obligations contained in the Charter and which, in the judgment of the United Nations, are able and willing to carry out those obligations. Applications for membership are granted by the General Assembly upon recommendation of the Security Council. Up to September 1946 the Security Council had considered eight such applications during the year, as follows: (1) People's Republic of Albania, January 25; (2) Mongolian People's Republic, June 24; (3) Afghanistan, July 2; (4) Hashamed Kingdom of Trans-Jordan, July 8; (5) Ireland, August 2; (6) Portugal, August 2; (7) Iceland, August 2; (8) Sweden, August 9. Siam, which had expressed a desire to become a member of the United Nations in a letter from the Siamese Foreign Minister to the Secretary-General of the United Nations dated May 20, subsequently withdrew her application for membership.

On May 17 the Security Council decided to refer all applications for membership to a committee composed of a representative of each of the members of the Council for examination. The Security Council considered the report of the Committee on the Admission of New Members on August 28 and 29. The representative of the United States proposed that the Security Council recommend the admission of all applicants "to accelerate advancement of the universality of membership." This proposal encountered objections from the representatives of the USSR and Australia and was, therefore, not adopted. The Council then discussed the merits of each application and voted separately on each. It was decided to recommend Afghanistan, Iceland, and Sweden for membership in the United Nations. The applications of Albania, Mongolia, Trans-Jordan, Ireland, and Portugal were not recommended to the General Assembly by the Security Council.

On November 29 Siam requested the reconsideration of its application. The Security Council decided on December 12 to recommend to the General Assembly that Siam be admitted as a Member of the United Nations.

**Military Staff Committee.** Under Article 43 of the United Nations Charter all Members of the United Nations "undertake to make available to the Security Council, on its call and in accordance with a special agreement or agreements, armed forces, assistance and facilities necessary for the purpose of maintaining international peace and security." Article 47 of the Charter provides that a Military Staff Committee, composed of the Chiefs of Staff of the permanent members of the Security Council or their representatives, be established to assist the

Security Council on all questions related to the Security Council's military requirements, and the employment, command and strategic direction of armed forces placed at the disposal of the Security Council.

In accordance with these provisions, the Security Council at its second meeting issued a directive requesting the Military Staff Committee to assemble and to draw up proposals for its organization and procedure. The Committee met in London from February 4 to February 14. It resumed its sessions at the Henry Hudson Hotel in New York on March 25.

The Military Staff Committee submitted a draft Statute and Rules of Procedure to the Security Council, which the Council referred to the Committee of Experts for examination. Pending final approval of the Military Staff Committee's proposals, the Draft Statute and Draft Rules of Procedure were adopted provisionally.

On February 16 the Security Council directed the Military Staff Committee "to examine from the military point of view the provisions in Article 43 of the Charter." As a first step in accomplishing this task, the Military Staff Committee decided to formulate recommendations to the Security Council as to the basic principles which should govern the organization of the United Nations forces. To this end the Military Staff Committee formed a Sub-Committee, which first met on March 28. The Sub-Committee has been studying the views submitted by the Delegations of China, France, the United Kingdom, the United States, and the USSR.

The Military Staff Committee formed a second Sub-Committee for the purpose of preparing a standard form of agreement between the Security Council and the Member Nations of the United Nations concerning the provision of armed forces.

**Atomic Energy Commission.** On January 24 the General Assembly of the United Nations unanimously resolved to establish a Commission to deal with the problems raised by the discovery of atomic energy to be composed of one representative from each of the States represented on the Security Council and Canada, when the latter is not a member of the Security Council. The Commission is to submit its report and recommendations to the Security Council.

By May 28 all States entitled to representation on the Atomic Energy Commission had appointed their representatives. The Secretary-General convened the first meeting of the Atomic Energy Commission for June 14. A Committee on Rules of Procedure was appointed, which submitted a draft. After adoption by the Atomic Energy Commission on July 3 the Security Council approved the provisional rules of procedure for the Atomic Energy Commission on July 10.

At the first meeting of the Atomic Energy Commission the representative of the United States presented a plan calling for the creation of an International Atomic Development Authority entrusted with all phases of the development and use of atomic energy. The Authority should conduct continuous surveys of world supplies of uranium and thorium, and bring the raw materials under its dominion. It should control and operate all primary production plants producing fissionable materials in dangerous quantities. It should possess the exclusive right to conduct research in the field of atomic explosives, and all other atomic research should be open only to nations under license of the Authority. Dangerous activities of the Authority, and its stockpiles, should be decentralized and strategically distributed. All nations should grant

freedom of inspection deemed necessary by the Authority. The representative of the United States stressed the importance of immediate punishment for infringement of the rights of the Authority. He urged that "there must be no veto to protect those who violate their solemn agreements not to develop or use atomic energy for destructive purposes."

On July 19 the representative of the USSR suggested that the first measure to be adopted should be the conclusion of an international agreement to forbid the production and use of atomic energy weapons, all stocks of atomic weapons should be destroyed three months from the entry into force of the agreement. Violation of the agreement should be severely punished under the domestic legislation of the contracting parties.

The Atomic Energy Commission decided to establish a Working Committee to consider all proposals made in the Commission with regard to the control of atomic energy. The Working Committee set up three other committees: Committee 2, to examine questions associated with the control of atomic energy activities and to make specific recommendations for such control; a Legal Advisory Committee to examine the legal aspects of atomic energy control; and a Scientific and Technical Committee to advise on the scientific aspects of the problem.

On July 31 Committee 2 requested the Scientific and Technical Committee to prepare a report on the question of whether effective control of atomic energy was possible, together with an indication of the methods by which the Scientific and Technical Committee considered that effective control could be achieved. After eight weeks of intensive study the Scientific and Technical Committee, on September 26, unanimously adopted a Report for submission to Committee 2. The Scientific and Technical Committee concluded that it did not find any basis in the available scientific facts for supposing that effective control of atomic energy was not technologically feasible. Whether or not it was politically feasible was for the Atomic Energy Commission to decide.

Both Committee 2 and the Atomic Energy Commission subsequently held informal discussion meetings concerning various aspects of atomic energy control on the basis of the findings of the Scientific and Technical Committee.

On October 15, at an informal meeting of Committee 2, the representative of the USSR proposed that atomic energy control begin at the most basic stage—unmined mineral resources—and called for a world wide report on uranium deposits.

On October 17 the Committee unanimously adopted a work plan suggested by the Atomic Commission Group of the Secretariat. Under the Secretariat outline, Committee discussions on safeguards to prevent diversion of materials followed a seven-step plan: uranium and thorium mines, concentration plants, refineries, chemicals and metallurgical plants, primary reactors and associated chemical separation plants, isotope separation plants, and secondary reactors.

On November 13 the Atomic Energy Commission held a formal meeting at which it decided to submit to the Security Council by December 31 a report of its proceedings, findings and deliberations to date, and to direct Committee 2 to submit a draft of such a report or parts thereof from time to time to the Commission for consideration and action, such draft to be completed by December 20.

At the meeting of the Commission on December 5 the delegate of the United States proposed that the Atomic Energy Commission's report to

the Security Council should consist of the following three parts: (1) a summary of the proceedings together with the records of the Commission and of its committees and sub-committees; (2) certain findings of the Commission based on its deliberations to date; and (3) certain recommendations of the Commission based on its findings to date. He submitted a draft resolution to the Atomic Energy Commission containing certain findings and recommendations.

After lengthy discussion the Atomic Energy Commission on December 30, decided by ten to zero, with the Soviet Union and Poland abstaining, to submit its report to the Security Council. The report recommended, on the basis of the United States proposals, the establishment of "a strong and comprehensive international system of control and inspection," the terms and functions of which should be defined in a treaty or convention. The treaty should include the establishment, within the United Nations, of an International Authority, in the operation of which no Government shall possess any right of veto; afford representatives of the Authority rights of ingress, egress and access to, from and within the territory of every participating nation, prohibit the manufacture and use of atomic weapons; provide for the disposal of existing stocks of atomic weapons; establish measures of enforcement and punishment to be imposed upon individuals and upon nations guilty of violating the terms of the treaty. See also ATOMIC ENERGY.

**The Economic and Social Council.** The Economic and Social Council, operating under the authority of the General Assembly, is to initiate studies and make recommendations with respect to international economic and social matters, to promote respect for, and observance of, human rights and fundamental freedoms, to prepare draft conventions and call international conferences with respect to matters falling within its competence. It may enter into agreements with specialized agencies and co-ordinate the policies and activities of such agencies.

The Council consists of eighteen members elected by the General Assembly for three-year terms. However, in the first election, six were elected for a term of one year, six for two years and six for three years. The members elected were:

**One-Year Term:** Colombia, Greece, Lebanon, Ukraine, United States, Yugoslavia.

**Two-Year Term:** Cuba, Czechoslovakia, India, Norway, Soviet Union, United Kingdom.

**Three-Year Term:** Belgium, Canada, Chile, China, France, Peru.

During 1946 the Council held three sessions. Sir Ramaswami Mudaliar of India was elected President of the Council. and Mr Andrija Stampar of Yugoslavia and Mr. Lleras Restrepo of Colombia, respectively, first and second Vice-Presidents.

**Commissions.** In the course of the year, the Council set up nine permanent commissions and a number of sub-commissions to undertake the great task of realizing the manifold objectives with regard to international economic and social co-operation embodied in the Charter.

The nine commissions of the Economic and Social Council are:

Narcotics Commission,  
Economic and Employment Commission,  
Transport and Communications Commission,  
Statistical Commission,  
Commission on Human Rights  
Social Commission,  
Commission on the Status of Women,  
Fiscal Commission,  
Population Commission.

The *Narcotics Commission* consists of the following fifteen members each for the regular term of three years: Canada, China, Egypt, France, India, Iran, Mexico, the Netherlands, Peru, Poland, Turkey, United Kingdom, United States of America, Union of Soviet Socialist Republics, and Yugoslavia.

This Commission is to assist the Council in exercising such powers of supervision over the application of international conventions and agreements dealing with narcotic drugs as may be assumed by or conferred on the Council; carry out such functions entrusted to the League of Nations Advisory Committee on Traffic in Opium and other Dangerous Drugs by the international conventions in narcotic drugs as the Council may find necessary to assume and continue, advise the Council on all matters pertaining to the control of narcotic drugs, and prepare such draft international conventions as may be necessary; consider what changes may be required in the existing machinery for the international control of narcotic drugs and submit proposals thereon to the Council; and perform such other functions relating to narcotic drugs as the Council may direct.

The *Economic and Employment Commission* consists of the following fifteen members: for two years, Belgium, France, Brazil, United Kingdom, Poland; for three years, Canada, China, India, Czechoslovakia, Norway; for four years, Cuba, USA, USSR, Australia; Byelorussia.

This Commission is to advise the Council on economic questions in order to promote higher standards of living. In particular, it is to advise the Council on the prevention of wide fluctuations in economic activity and the promotion of full employment by the co-ordination of national full employment policies and by international action; problems of the reconstruction of devastated areas and other urgent problems arising from the war, with a view to developing means of giving real help to various Members of the United Nations whose territories were devastated by the enemy as a result of occupation and war activities; the promotion of economic development and progress with special regard to the problems of less developed areas.

The Economic and Employment Commission set up the following three sub-commissions: Economic Reconstruction of Devastated Areas, Employment and Economic Stability, Economic Development.

The Sub-Commission on the Economic Reconstruction of Devastated Areas is to advise the Commission on the nature and scope of the economic reconstruction problems of those countries facing urgent tasks in this field whether by reason of occupation or physical devastation and on the progress of reconstruction and the measures of international co-operation by which the reconstruction of those countries might be effectively facilitated.

The Sub-Commission on Employment and Economic Stability is to study national and international full employment policies and fluctuations in economic activity; to analyze the causes of these fluctuations, and to advise the Commission on the most appropriate methods of promoting full employment and economic stability.

The Sub-Commission on Economic Development is to study and advise the commission on the principles and problems of long-term economic development with particular attention to the inadequately developed parts of the world, and to advise the Commission on promoting the fullest and

most effective utilization of natural resources, labor and capital; raising the level of consumption, and studying the effects of industrialization and changes of a technological order upon the world economic situation.

The *Transport and Communications Commission* consists of the following fifteen members: for two years, India, Netherlands, United Kingdom, Poland, Brazil; for three years, Chile, China, France, Norway, South Africa; for four years, USA, Egypt, USSR, Czechoslovakia, Yugoslavia.

This Commission is to advise the Council on the co-ordination of the work of the specialized agencies in the sphere of transport and communications, to advise the Council in fields where no permanent international organization yet exists and on problems which concern more than one sphere of transport or communications; and to suggest to the Council the creation of new agencies, or the conclusion of new conventions or the revision of existing conventions.

The *Statistical Commission* consists of the following twelve members: for two years, Netherlands, USA, USSR, China; for three years, India, Canada, Mexico, Ukraine; for four years, France, Norway, United Kingdom, Turkey.

This Commission is to assist the Council in promoting the development of national statistics and the improvement of their comparability; in advising the organs of the United Nations on general questions relating to the collections, interpretation and dissemination of statistical information; and in promoting the improvement of statistics and statistical methods generally.

The *Commission on Human Rights* is composed of the following eighteen members: for two years, United Kingdom, China, Uruguay, Lebanon, Panama, Byelorussia, for three years, France, Egypt, India, USSR, Ukraine, Iran; for four years, Belgium, Chile, Australia, USA, Philippines, Yugoslavia.

This Commission is to study problems relating to an international bill of rights, international declarations or conventions on civil liberties, freedom of information and similar matters; the protection of minorities; and the prevention of discrimination on grounds of race, sex, language or religion.

The *Social Commission* consists of the following eighteen members: for two years, France, USA, Czechoslovakia, South Africa, Greece, USSR, for three years, Netherlands, New Zealand, Peru, Colombia, United Kingdom, Yugoslavia; for four years, Canada, China, Denmark, Ecuador, Poland, Iraq.

This Commission is to advise the Council on social questions of a general character, and in particular on all matters in the social field not covered by specialized inter-governmental agencies; on practical measures that may be needed in the social field; on measures needed for the co-ordination of activities in the social field; and on such international agreements and conventions on any of these matters as may be required, and on their execution.

The *Commission on the Status of Women* consists of the following fifteen members: for two years, India, Australia, China, Byelorussia, Guatemala; for three years, United Kingdom, USSR, USA, Syria, Mexico; for four years, Denmark, France, Venezuela, Costa Rica, Turkey.

This Commission is to prepare recommendations and reports to the Council on promoting women's rights in political, economic, social and educational fields. It may also make recommendations to the Council on urgent problems requiring immediate attention in the field of women's rights.

The *Fiscal Commission* consists of the following fifteen members: for two years, USA, Belgium, Czechoslovakia, India, New Zealand; for three years, Colombia, USSR, Cuba, Lebanon, Poland; for four years, China, France, United Kingdom, South Africa, Ukraine.

This Commission is to study the problems of public finance that are of international or collective interest. It will offer guidance in its field to the Council, the other organs of the United Nations and the Member states. Its activities will consist in the formulation of principles of financial legislation and administration, the preparation of draft tax treaties and the presentation of scientific reports, as well as practical recommendations on current fiscal problems.

The *Population Commission* consists of the following twelve members: for two years, USA, USSR, China, United Kingdom; for three years, France, Australia, Canada, Ukraine; for four years, Peru, Brazil, Netherlands, Yugoslavia.

This Commission is to study and advise the Council on population changes, factors associated with such changes, and policies designed to influence these factors; inter-relationship of economic and social conditions and population trends; and migratory movements of population and factors associated with such movements.

**The Specialized Agencies.** Article 57 of the United Nations Charter states: "The various specialized agencies, established by inter-governmental agreement and having wide international responsibilities, as defined in their basic instruments, in economic, social, cultural, educational, health, and related fields, shall be brought into relationship with the United Nations."

More specifically, the Charter outlines the responsibilities of the Economic and Social Council in this respect. The Council may enter into agreements with the specialized agencies, defining the terms on which the agency concerned shall be brought into relationship with the United Nations, such agreements being subject to approval by the General Assembly. It may co-ordinate the activities of the specialized agencies through consultation with and recommendations to such agencies and through recommendations to the General Assembly and to the Members of the United Nations. The Council may also take appropriate steps to obtain regular reports from the specialized agencies, and it may communicate its observations on these reports to the General Assembly. It may, with the approval of the General Assembly, perform services at the request of specialized agencies. The Council may make arrangements for representatives of the specialized agencies to participate, without vote, in its deliberations and in those of the commissions established by it, and for its representatives to participate in the deliberations of the specialized agencies.

Pursuant to directives from the General Assembly, the Economic and Social Council, at its first session in London, began the work of bringing international organizations having wide international responsibilities into relationship with the United Nations by appointing a Committee on Negotiations with Inter-Governmental Agencies. The Council designated the following members to constitute the Committee: Belgium, Canada, Chile, China, Colombia, Czechoslovakia, France, Norway, USSR, United Kingdom, USA, and the President of the Council.

Agreements had been negotiated with the following organizations: The International Labor Organization, the United Nations Educational, Scientific

and Cultural Organization, the Food and Agriculture Organization and the Provisional International Civil Aviation Organization. Owing to the fact that the International Monetary Fund and the International Bank for Reconstruction and Development were facing urgent organizational problems, negotiations with them were postponed until a later date. However, the Fund and the Bank informed the Secretary-General that they were most desirous of continuing and intensifying practical co-operation with the United Nations.

Each agreement contains the following provisions; recognition by the United Nations of the specialized functions of each agency; reciprocal representation; recommendations by the United Nations to the agency; exchange of information and documents; assistance by the agency to the Security Council and the Trusteeship Council; authorization by the General Assembly that the agency may request advisory opinions of the International Court of Justice on legal questions; consultation between the United Nations and the agency on the establishment of an international civil service; co-operation in statistical services and in administrative and technical services; co-operation in budgetary and financial arrangements, and liaison arrangements between the United Nations and the agency.

In addition to agreements being negotiated with existing specialized agencies, the Economic and Social Council took preparatory steps for the setting up of three new specialized agencies: World Health Organization, International Refugee Organization and International Trade Organization.

At its first session the Economic and Social Council decided to convene an International Health Conference and appointed a Preparatory Technical Committee to prepare an agenda for the conference. The conference was held in New York from June 19 to July 22, and adopted a Constitution of the World Health Organization. Pending the formal establishment of the Organization, an Interim Health Commission was set up whose secretarial staff was provided by the United Nations Secretariat.

The World Health Organization is intended to be the sole organization of its kind and to absorb the League of Nations Health Organization and the *Office internationale d'Hygiène publique* and assume in addition the functions entrusted to the United Nations Relief and Rehabilitation Administration under the International Sanitary Conventions of 1944.

The General Assembly had referred to the Economic and Social Council the question of refugees, whereupon the Council set up a Special Committee on Refugees and Displaced Persons to study the problem and making recommendations. The Committee agreed on the necessity of establishing a new international body to deal with the problem of refugees and displaced persons and at its third session the Economic and Social Council decided to establish a new specialized agency to be known as the International Refugee Organization which would repatriate those refugees and displaced persons desiring to return to their countries of origin and resettle those having a valid objection to being so repatriated. The Council adopted a draft Constitution of IRO and submitted it to the General Assembly for approval.

The Economic and Social Council approved a resolution during its first session concerning the calling of an International Conference on Trade and Employment and appointed a Preparatory

Committee to prepare an agenda. The Council suggested that the agenda should include: (1) international agreements relating to the achievements of high levels of employment; regulations, restrictions and discriminations affecting international trade, restrictive business practices and inter-governmental commodity arrangements; and (2) the establishment of an International Trade Organization as a specialized agency of the United Nations. It was thought impossible to hold the Conference in 1946 but the Preparatory Committee of the Conference met on October 15 in London and was comprised of representatives of the following countries: Australia, Belgium, Luxembourg, Brazil, Canada, Chile, China, Cuba, Czechoslovakia, France, India, Lebanon, Netherlands, New Zealand, Norway, South Africa, USSR, USA, and the United Kingdom. The second session of the Preparatory Committee was scheduled to meet on April 8, 1947 in Geneva.

**Non-Governmental Organizations.** Article 71 of the Charter states: "The Economic and Social Council may make suitable arrangements for consultations with non-governmental organizations which are concerned with matters within its competence. Such arrangements may be made with international organizations and, where appropriate, with national organizations after consultations with the Member of the United Nations concerned."

It should be noted that these relationships with non-governmental organizations are on a consultative basis only.

Organizations desiring to make arrangements for consultation with the Council are divided into three categories:

(a) Organizations which have a basic interest in most of the activities of the Council, and are closely linked with the economic or social life of the areas which they represent,

(b) Organizations which have a special competence but are concerned specifically with only a few of the fields of activity covered by the Council,

(c) Organizations which are primarily concerned with the development of public opinion and with the dissemination of information.

Organizations in category (a), in addition to sending observers to public meetings of the Council, may circulate to members of the Council written communications, and they may be invited to consult with a standing committee if the Council so desires or the organization so requests. Organizations in categories (b) and (c) may send observers to public meetings. However, their communications would be placed on a list and would be distributed only on the request of a member of the Council. They may be invited to consult with a committee appointed for that purpose if the Council so desires or the organization so requests.

With regard to national organizations, they should normally present their views through their respective governments or through international non-governmental organizations to which they belong. However, they may be eligible for consultation if they cover a field not covered by any international organization, or have special experience.

The World Federation of Trade Unions, the International Co-operative Alliance, and the American Federation of Labor were placed in category (a).

A Standing Committee comprised of the President of the Council and five members of the Council, who are assisted by the Assistant Secretaries-General for Economic and Social Affairs respectively was established. This Committee reviews applications for consultative status submitted by non-governmental organizations, and makes recommendations to the Council. The members of the Com-

mittee were: China, France, the Soviet Union, the United Kingdom, and the United States of America.

**The Trusteeship Council.** The Trusteeship Council was organized during the second part of the first session of the General Assembly. The members of the Council are as follows:

**Administering Authorities:** Australia, Belgium, France, New Zealand, United Kingdom.

**Non-Administering Authorities:** China, Iraq, Mexico, Soviet Union, United States.

The General Assembly decided that the Secretary-General should convoke the first session of the Trusteeship Council later than March 15, 1947.

At the first part of the first session of the General Assembly, the Government of the United Kingdom stated that it had prepared draft trusteeship agreements for the three African territories mandated to it and that these had been distributed to certain States as "directly concerned" and to certain other States "for information." The Belgian Government, at that time, also announced that a draft trusteeship agreement for its African mandated territory had been formulated, and that Belgium was prepared to start immediate negotiations with the States directly concerned. At the same time, the New Zealand Government declared that it was willing to place the mandated territory of Western Samoa, and the French Government declared that it was willing to place the mandated territories of Togoland and the Cameroons, under the trusteeship system of the United Nations.

Draft trusteeship agreements for the following mandated territories were submitted to the General Assembly during the second part of its first session: by Australia—New Guinea under C Mandate; by Belgium—Ruanda-Urundi under B Mandate; by France—Cameroons under French B Mandate, Togoland under French B Mandate; by New Zealand—Western Samoa under C Mandate; by the United Kingdom—The Cameroons under British B Mandate, Togoland under British B Mandate, Tanganyika Territory under B Mandate.

The main provisions of these draft trusteeship agreements are as follows:

- (1) Definition of the boundary of each territory to be placed under the trusteeship system
- (2) Designation of the administering authority of the trust territory
- (3) The obligations of the administering authority under article 76 of the Charter of the United Nations (which sets forth the basic objectives of the trusteeship system).
- (4) The rights of the administering authority in legislation, administration and jurisdiction; in constituting the trust territory into a customs, fiscal or administrative union with adjacent territories under the control of the administering authority; in establishing naval, military and air bases
- (5) Promotion of the development of political institutions suited to the trust territory
- (6) Application of the provisions of general international conventions and recommendations drawn up or to be drawn up by specialized agencies referred to in article 57 of the Charter
- (7) Protection of the rights and interests of the inhabitants in land and natural resources.
- (8) Equal treatment in social, economic and commercial matters for all Members of the United Nations.
- (9) Promotion of the educational and cultural development of the inhabitants
- (10) Ensurance of freedom of religion and freedom of speech.
- (11) Annual reports to the General Assembly by the administering authority on the basis of a questionnaire formulated by the Trusteeship Council in accordance with Article 88 of the Charter.
- (12) Approval of the terms of the agreement and if any alteration or amendment thereof by the General Assembly.

In accordance with Article 85 of the Charter the General Assembly approved on December 13 the terms of these eight trusteeship agreements.

In these agreements, Australia, Belgium, France, New Zealand and the United Kingdom were designated as administering authorities.

Under Article 86 (a), Australia, Belgium, France, New Zealand and the United Kingdom are members of the Trusteeship Council.

By application of Article 86 (b), China, the Soviet Union and the United States—permanent members of the Security Council which are not administering authorities of trust territories—are also members of the Trusteeship Council.

In accordance with Article 86 (c), it was necessary, in order that the total number of members of the Trusteeship Council is equally divided between those Members of the United Nations which administer trust territories and those which do not, that two Members should be elected by the General Assembly to the Trusteeship Council.

Accordingly, the General Assembly on December 14 elected Iraq and Mexico as members of the Trusteeship Council and directed the Secretary-General to convoke the first session of the Council not later than March 15, 1947.

Under Article 73 (e) of the Charter, Members of the United Nations which have responsibility for the administration of non-self-governing territories undertake to transmit regularly to the Secretary-General statistical and other information relating to economic, social and educational conditions in such territories. In the course of the year the Secretary-General had received information from Australia, Belgium, France, the Netherlands, the United Kingdom and the United States regarding conditions in their respective non-self-governing territories.

**The International Court of Justice.** On February 6, 1946 the General Assembly and Security Council, voting independently, elected the following judges: for nine-year terms, Alejandro Alvarez (Chile), Jose Philadelpho de Barros Azevedo (Brazil), Jules Basdevant (France), Jose Gustave Guerrero (El Salvador), Sir Arnold Duncan McNair (United Kingdom); for six-year terms, Isidro Fabela Alfaro (Mexico), Green H. Hackworth (USA), Helge Klaestad (Norway), Sergei Borsovich Krylov (USSR), Charles de Visscher (Belgium); for three-year terms, Abdel Hamid Badawi Pasha (Egypt), Hsu Mo (China), John E. Read (Canada), Bogdan Winiarski (Poland), Milovan Zoricic (Yugoslavia).

On February 10, the General Assembly adopted a resolution instructing the Secretary-General to take the necessary steps to summon a first meeting of the Court at The Hague as soon as could be arranged, to appoint a Secretary and other temporary officers to assist the Court and to act during the period preceding the appointment by the Court of its Registrar and its officers, and to conduct preliminary negotiations with the Board of Directors of the Carnegie Foundation in order to fix the conditions on which the premises in the Peace Palace at the Hague could be placed at the Court's disposal.

On February 6, the Secretary-General wrote to the candidates who had been elected asking them whether they accepted appointment and whether they would be able to attend the first meeting of the Court at The Hague on or about April 7, 1946. Shortly afterwards, an informal meeting of those members of the Court who were available in London was held under the chairmanship of Mr. J. G. Guerrero; it was then decided that the first meeting of the Court should commence on April 3, 1946.

The Acting Secretary of the Court appointed by the Secretary-General of the United Nations, after

a preliminary visit to The Hague in the middle of February, during which he made arrangements for the coming meeting of the Court, including arrangements for the engaging of temporary staff, proceeded to The Hague in the middle of March with a small staff to prepare for the meeting.

Meantime, the United Nations' Negotiating Committee on League of Nations Assets negotiated agreements with the Carnegie Foundation at The Hague concerning the use of the Peace Palace by the International Court as from April 1, 1946.

The first meeting of the Court was held on April 3. On April 6, the Court elected Mr. J. G. Guerrero to be President and Mr. J. Basdevant to be Vice-President, and appointed Mr. E. Hambro, the Acting Secretary, to be Registrar of the Court. Subsequently, on April 13, the Court appointed M. J. Garnier-Cognot to be Deputy Registrar.

On May 3, the Court formed the Chamber for Summary Procedure provided for in Article 29 of the Statute. The following were elected: Mr. J. G. Guerrero (President), Mr. J. Basdevant, Sir Arnold McNair, Mr. S. B. Krylov and Mr. Iisu Mo (members), Mr. Isidro Fabela and Mr. Charles de Visscher (substitute members).

An inaugural sitting of the Court was held on April 18 in the Great Hall of Justice in the Peace Palace in the presence of H.R.H. the Princess of the Netherlands and H.R.H. the Prince of the Netherlands. At this sitting, the judges (who were all present with the exception of Mr. A. Alfarez (Chile) who was unable to reach The Hague in time) made in turn the solemn declaration required under Article 20 of the Court's Statute.

The Court continued to sit until May 6. It devoted itself to a number of administrative questions and the preparation of the Rules of Court. The latter were extensively based upon the Rules of the Permanent Court of International Justice. It was generally agreed that, as the latter Rules had been adopted as recently as 1936 and represented the outcome of experience gained and had for the most part been adopted as a codification of practice, it was unnecessary to amend them.

**The General Assembly (Second Part of First Session).** The second part of the first session of the General Assembly took place in the City of New York Building from October 23 to December 15, 1946. The first part of the session dealt with initial organizational matters, but the second part considered a number of substantive issues.

**Admission of New Members.** The General Assembly, upon the recommendations of the Security Council, admitted Afghanistan, Iceland, Sweden and Siam to membership in the United Nations. Thus the total number of members was increased to fifty-five. The Assembly recommended that the Security Council re-examine the applications for membership of Albania, Mongolia, Trans-Jordan, Ireland, and Portugal "on their respective merits as measured by the yardstick of the Charter."

**Election of Members of Councils.** On November 19 the General Assembly elected Belgium, Colombia, and Syria to be members of the Security Council for a term of two years, to replace the retiring members, Egypt, the Netherlands, and Mexico.

According to the Charter, the General Assembly elects six new members of the Economic and Social Council every year. Since Belgium resigned from membership in the Council, the Assembly elected seven members. Those elected were: Byelorussia, the Netherlands, New Zealand, Lebanon, Turkey, the United States, and Venezuela.

The Assembly elected Iraq and Mexico to be members of the Trusteeship Council.

**Political and Security Issues.** After lengthy debate the General Assembly adopted a comprehensive resolution on regulation and reduction of armaments. In this resolution, the General Assembly:

1. Recognized the necessity of an early general regulation and reduction of armaments and armed forces,

2. Recommended that the Security Council give prompt consideration to formulating practical measures for the general regulation and reduction of armaments and armed forces;

3. Urged the expeditious fulfillment by the Atomic Energy Commission of its terms of reference;

4. Recommended that the Security Council expedite consideration of the reports which the Atomic Energy Commission will make and expedite consideration of a draft convention or conventions for the creation of an international system of control and inspection, these conventions to include the prohibition of atomic and all other major weapons of mass destruction;

5. Recommended that the Security Council give prompt consideration to practical and effective safeguards in connection with the control of atomic energy and the general regulation and reduction of armaments,

6. Recommended the establishment, within the framework of the Security Council, of an international system of control and inspection, operating through special organs, which organs shall derive their powers and status from the convention or conventions under which they are established;

7. Recommended the Security Council to accelerate the placing at its disposal of the armed forces mentioned in Article 43 of the Charter, and recommended the members to undertake the progressive and balanced withdrawal of their armed forces stationed in ex-enemy territories and the withdrawal without delay of armed forces stationed in the territories of members without their consent, and further recommended a general progressive and balanced reduction of national armed forces,

8. Called upon all members of the United Nations to render every possible assistance to the Security Council and the Atomic Energy Commission.

The veto power of the permanent members of the Security Council having aroused a great deal of controversy, the General Assembly decided in a resolution to request the permanent members of the Council to make every effort to ensure that "the use of the veto power does not impede the Security Council in reaching decisions promptly."

The General Assembly resolved that the Franco regime be debarred from membership in international agencies established by or brought into relationship with the United Nations and that all Members of the United Nations immediately recall from Madrid their ambassadors and ministers accredited there.

In another resolution the General Assembly declared that the treatment of Indians in South Africa should conform to provisions of the Charter and requested the Governments of India and the Union of South Africa to report at the next session of the Assembly the measures adopted to this effect.

**Economic and Social Problems.** The Assembly amended and approved the Constitution of the International Refugee Organization which was recommended by the Economic and Social Council, and authorized the establishment of a Preparatory Commission of IRO and adopted a provisional budget of IRO for the first financial year.

The Assembly urged all members of the United Nations to accept the Constitution of the World Health Organization and authorized two loans for the financing of the Interim Commission of WHO in 1946 and 1947.

The Assembly recommended that the Economic and Social Council give favorable consideration to the establishment of an Economic Commission for Europe and an Economic Commission for Asia and the Far East.

The Assembly approved the creation of an International Children's Emergency Fund.

The Assembly instructed the Economic and Social Council to undertake the convocation of an International Conference on Freedom of Information.

**Trusteeship and Non-Self-Governing Territories.** The General Assembly approved eight trusteeship agreements and elected two members of the Trusteeship Council.

The Union of South Africa had proposed to incorporate the mandated territory of Southwest Africa into the Union. The General Assembly in a resolution declared that the annexation of any mandated territory by a mandatory Power is inconsistent with the principles of the Charter which provides for the progressive development of peoples in trust territories toward self-government or independence; rejected proposal for the incorporation of the territory of Southwest Africa in the Union of South Africa; and requested that the Government of the Union of South Africa submit to the Assembly a trusteeship agreement for the territory of Southwest Africa.

The Assembly recommended that Members which administer non-self-governing territories convene conferences of representatives of non-self-governing peoples in order that the wishes and aspirations of such peoples may be expressed.

The Assembly invited Members transmitting information under Article 73 (e) to send to the Secretary-General by June 30 each year the most recent information at their disposal; recommended that such information should be summarized, analyzed and classified by the Secretary-General.

**Administrative and Budgetary Matters.** The General Assembly on December 14 decided that the first annual budget (1946) of the United Nations should be US \$19,390,000, and the second annual budget (1947) US \$27,740,000; and that the working capital fund should be maintained for 1947 at the amount of US \$20,000,000.

The Assembly adopted a scale of assessment for the budgets and the working capital fund. According to this scale, the United States shall contribute 39.89 per cent, the United Kingdom 11.98 per cent, the Soviet Union 6.62 per cent, France 6.30 per cent, China 6.30 per cent, India 4.09 per cent, Canada 3.35 per cent of the total.

**Legal Matters.** The General Assembly established a committee of sixteen members to study the methods by which the General Assembly should encourage the progressive development of international law and its eventual codification. The Assembly affirmed the principles of international law recognized by the Charter of the Nuremberg Tribunal and the judgment of the Tribunal, and affirmed that genocide is a crime under international law and invited Members to enact the necessary legislation for the prevention and punishment of this crime.

In accordance with a recommendation of the Security Council, the General Assembly resolved that Switzerland should become a party to the Statute of the International Court of Justice on the date of the deposit with the Secretary-General of an instrument containing (a) acceptance of the provisions of the Statute; (b) acceptance of the obligations under Article 94 of the Charter; and (c) an undertaking to contribute to the expenses of the Court.

**Headquarters.** On December 10 Mr. John D. Rockefeller, Jr., offered to give to the United Nations a sum of US \$8,500,000, on certain terms and conditions, to make possible the acquisition of a tract of land in New York City. The General Assembly decided on December 14 to accept "with a feeling of sincere gratitude" Mr. Rockefeller's offer, and resolved that the permanent headquarters of the United Nations "shall be established in New York City in the area bounded by First Avenue,

East 48th Street, the East River and East 42nd Street."

**The Secretariat.** The Secretariat is headed by the Secretary-General, immediately under whom there are eight Assistant Secretaries-General. The Secretariat comprises an Executive Office of the Secretary-General and eight departments: Department of Security Council Affairs, Department of Economic Affairs, Department of Social Affairs, Department of Trusteeship and Information from Non-Self-Governing Territories, Department of Public Information, Legal Department, Conference and General Services, and Administrative and Financial Services.

Trygve Lie is the Secretary-General of the United Nations. A. A. Sobolev is Assistant Secretary-General in charge of Security Council Affairs; David Owen, Assistant Secretary-General in charge of Economic Affairs; Henri Laugier, Assistant Secretary-General in charge of Social Affairs; Victor Chittai Hoo, Assistant Secretary-General in charge of Trusteeship and Information from Non-Self-Governing Territories; Benjamin Cohen, Assistant Secretary-General in charge of Public Information; Ivan Kerno, Assistant Secretary-General in charge of the Legal Department; Adrian Pelt, Assistant Secretary-General in charge of Conference and General Services; John B. Hutson, Assistant Secretary-General in charge of Administrative and Financial Services; and Andrew W. Cordier, Executive Assistant to the Secretary-General. As of December 1946, the total staff of the Secretariat numbered approximately 3,000.

The Executive Office of the Secretary-General assists the Secretary-General in his relationships with Members and with the organs of the United Nations, with specialized agencies and non-governmental organizations, and in co-ordinating the activities of the Departments of the Secretariat affecting such relationships.

The Department of Security Council Affairs serves the Security Council in the fulfillment of its continuous functions under the Charter; assists the Secretary-General in the performance of his responsibilities under Article 99 of the Charter; provides documentation for the General Assembly when it considers questions relating to the maintenance of peace and security.

The Department of Economic Affairs serves the Economic and Social Council, certain of its Commissions and Committees, and the Second Committee of the General Assembly, with respect to their economic functions. The Department provides economic studies and reports for economic publications of United Nations; technical assistance to all units of the Secretariat requiring economic or statistical information; and serves as liaison with specialized agencies and non-governmental organizations concerned with regional or international economic affairs.

The Department of Social Affairs serves the Economic and Social Council, certain of its Commissions and Committees, and the Third Committee of the General Assembly with respect to their functions in the fields of science, education, culture, social questions, demography, human rights, refugees and displaced persons, narcotic drugs and public health; provides studies and reports in the fields of its competence for publications of United Nations; provides liaison with specialized agencies and non-governmental organizations concerned with these questions in their regional or international respects.

The Department of Trusteeship and Information from Non-Self-Governing Territories serves the

Trusteeship Council and the Fourth Committee of the General Assembly; informs the Secretary-General of problems and developments in this field; supplies other organs of the United Nations and departments of the Secretariat with information concerning trust territories, non-self-governing territories, and non-security aspects of strategic areas; and provides documentation for the General Assembly when it considers questions arising under Chapters XI, XII, and XIII of the Charter.

The Department of Public Information advises the Secretary-General on all phases of information policy; develops facilities and services for press, radio, films, and other information media, and establishes and maintains informational relationships on an international basis with governmental and non-governmental organizations, at headquarters and overseas.

The Legal Department advises the Secretariat and other organs of the United Nations on legal and constitutional questions; encourages the progressive development of international law and its codification; and maintains liaison with the International Court of Justice.

The Department of Conference and General Services makes arrangements for meetings of the General Assembly, Councils, Commissions, Committees, and special conferences held under the auspices of the United Nations; provides general business management services for United Nations; provides necessary services for the Headquarters Commission, and provides the administrative channel for communications and liaison between the headquarters organization and the temporary Geneva Office, the temporary London Office, and other temporary conference service offices established away from headquarters.

The Department of Administrative and Financial Services plans and executes the personnel, budgetary and fiscal programs of the United Nations; keeps the Secretary-General informed of problems and developments in these fields requiring his attention; provides staff assistance to the Secretary-General and to the Assistant Secretaries-General in administrative and organization planning; provides data required by the General Assembly, Councils and Committees with respect to administrative, financial and budgetary questions; maintains relationships with all Departments of the Secretariat and with the Registrar of the International Court of Justice on administration, budgetary and financial questions; advises the Secretary-General on proposed programs of the organization prior to their adoption with respect to their personnel, budgetary and financial implications; is responsible for arranging with Member Nations for the payment of their contributions.

LIN MOUSHENG.

**UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION (UNRRA).** Organized as the first service agency of the United Nations on November 9, 1943, UNRRA included forty-eight governments in its membership in 1946. While all members participated in the policy-making council, nine governments—the United States, the United Kingdom, the Soviet Union, China, France, Canada, Australia, Brazil, and Yugoslavia—composed the Central Committee, which was empowered to make emergency policy decisions between sessions of the Council. A Director General, assisted by a staff of 12,000 persons, was vested with executive responsibility. Mr. Herbert H. Lehman, who served as Director General from the inception of the administration until his resignation in March, 1946, was

succeeded by Mr. Fiorella H. LaGuardia. On January 1, 1947 Mr. LaGuardia was succeeded by Maj. Gen. Lowell W. Rooks.

The purpose behind the organization of UNRRA was to provide relief and rehabilitation to the peoples of European and Far Eastern liberated territories, concentrating primarily on assisting those nations without adequate foreign exchange resources to finance their own relief imports. This assistance consisted of relief supplies—food, clothing, fuel, medicines; relief services—health and welfare services, repatriation of displaced persons; and rehabilitation supplies and services—seeds, fertilizers, insecticides, basic farm tools, repair parts for the rehabilitation of industry, transportation, and other public utilities, and raw materials. Each member nation, not occupied by the enemy, was asked to contribute one percent of its national income for the year ending June 30, 1943, so that the supplies and services could be financed. Later, it was asked to make a second contribution in the same amount. Meanwhile, all countries, invaded and uninvaded alike, contributed proportionately to UNRRA's administrative budget. As of September 30, 1946, the total operating and administrative contributions authorized by UNRRA's member governments amounted to \$3,693,509,914. The total amounts subscribed by the three largest contributors were: United States, \$2,700,000,000, United Kingdom, \$624,650,000; and Canada, \$138,738,739.

After a period of planning and training, UNRRA took over relief operations from the military in Greece on April 1, 1945, and in Yugoslavia on April 15, 1945. V-E Day paved the way for increasing supplies and shipping to meet the needs of liberated countries in Europe. V-J Day made possible relief and rehabilitation operations on a global basis. General relief aid was provided by UNRRA during 1946 to the following countries: Albania, Austria, the Byelorussian Soviet Socialist Republic, China, Czechoslovakia, the Dodecanese Islands, Greece, Italy, Poland, the Ukrainian Soviet Socialist Republic, and Yugoslavia. Programs of limited emergency aid were in effect on behalf of Finland, Hungary, and the Philippines, and a special program was being operated to help Ethiopia in the fields of medicine, welfare, and transport.

In 1946, UNRRA personnel assisted the military in the care of upwards of a million displaced persons, and administered hundreds of displaced persons assembly centers. However, overall responsibility for the displaced persons operations in Germany and Austria belonged to the military authorities, who provided the basic supplies and transportation.

The acceleration of UNRRA's operations was borne out by the following cumulative statistics of supplies shipped overseas:

End of first quarter, 1945: 37,000 long tons. End of second quarter, 1945: 1,101,000 long tons. End of third quarter, 1945: 2,126,000 long tons. End of fourth quarter, 1945: 4,032,000 long tons. End of first quarter, 1946: 8,252,000 long tons. End of second quarter, 1946: 12,855,000 long tons. End of third quarter, 1946: 16,633,000 long tons. End of fourth quarter, 1946: 19,257,970 tons.

Operations in 1946 were seriously affected by the critical world food shortage. UNRRA was unable to obtain sufficient allocations of bread grains to meet its minimum overseas commitments during the first half of the year. The fourth session of the UNRRA Council, held in March, 1946, underscored the necessity of the supplying and receiving countries to take all possible measures to conserve

and make available more food to avert widespread famine in Europe and the Far East. Mr. LaGuardia, elected Director General at this session, devoted most of his time in the succeeding months to overcoming the food shortage. He also called attention to the necessity of finding a permanent solution to the displaced persons problem in Europe.

Extraordinary efforts on the part of the major wheat-growing countries and the arrival of harvests in liberated areas materially eased the food crisis in the last half of 1946, although UNRRA officials warned that the danger of hunger would remain at least through 1947.

The fifth session of the UNRRA Council was held at Geneva, Switzerland, in August, 1946, with the major purpose of defining a policy regarding the termination of the organization and the transfer of its remaining functions to permanent international bodies. Among the resolutions adopted were:

1. The transfer of UNRRA's major health activities to the World Health Organization or its Interim Commission.

2. The authorization of the transfer to the United Nations of such social welfare functions as the United Nations desire to undertake.

3. The continuation of displaced persons operations until undertaken by the International Refugee Organization, or by any other appropriate body, provided that none of these operations were to be continued by UNRRA after June 30, 1947.

4. The rehabilitation of children and adolescents of liberated countries by the creation of an International Children's Fund to which such assets would be transferred as the Central Committee might determine to be available after completion of the work of UNRRA.

5. The recommendation that the General Assembly of the United Nations establish the appropriate agency, or agencies, to review the needs in 1947 for financing urgent imports of the basic essentials of life, after the termination of UNRRA programs, and to recommend the financial assistance required to meet such future relief needs. During October, 1946, UNRRA began tapering off its operations by reducing activities and personnel. Preparations were made for the transfer of UNRRA's functions to permanent international organizations. Director General LaGuardia submitted a detailed report to the UN on the progress made toward economic rehabilitation in the countries assisted by UNRRA. The report pointed out that "By the end of its operations, UNRRA will have delivered about three and a half billion dollars worth of supplies (including freight). This is more than three times the value of relief after World War I. . . ." However, the report warned that after UNRRA's program of operations was completed in 1947, the countries of eastern and southern Europe, and China, would face uncertain and difficult economic conditions.

**UNITED SERVICE ORGANIZATIONS, Inc. (USO).** An organization formed February 4, 1941, to provide off-duty recreational and other services to the men in the armed forces, with the following member agencies: The Young Men's Christian Association, The National Catholic Community Service, The Salvation Army, The Young Women's Christian Associations, The National Jewish Welfare Board, and the National Travelers Aid Association (q.v. under SOCIETIES). USO is supported entirely by public subscription. In 1941 and 1942 it obtained \$14,353,666 and \$32,586,501 respectively through its own campaigns. In 1943, 1944, and 1945, with other major war-related agencies, it was a member of the National War Fund (q.v.) which conducted

a nationwide campaign. The National War Fund goal in 1945 was \$115,000,000, and USO's share of the total was \$52,096,500. In 1946 expenditures were \$38,338,000.

The groups served are men and women of the armed forces. Members of the Women's Army Corps and women's auxiliaries of the Navy, Coast Guard, and Marines are admitted to USO clubs and other service units on the same basis as men in uniform. Services are also extended, as required, to Army and Navy nurses, merchant seamen and wives of service men. Industrial workers in certain areas were also served. There are USO operations in the Continental United States, in bases elsewhere in the western hemisphere, and in the Philippine Islands. USO-Camp Shows visited American troops in all combat zones, as well as throughout the western hemisphere. More than one billion people have been served by USO since its inception. The USO came into being at the time the nation was preparing its defenses under the threat of war. Originally it was planned to operate 341 clubs in 200 communities. When America entered the war December 7, 1941, USO had 496 clubs and other centers in operation. With the tremendous expansion of our armed forces USO services also had to expand rapidly; USO operations totaled 3,040 in March, 1945, but decreased after the end of the war to 2,261 on Nov. 15, 1945.

At the end of 1946, the USO operated 298 clubs and 63 lounges. Attendance totals for 1946 were: camp shows, 22,000,000; clubs, 132,500,000; lounges, 9,500,000.

USO officers in 1946 were: Dr. Lindsley F. Kimball, President; John D. Rockefeller, Jr., Honorary Chairman; Walter Hoving, Chairman of the Board, Harper Sibley, Vice-Chairman of the Board; C. Frank Kramer, Jr., Secretary; and John F. Hickey, Treasurer. National Headquarters are in the Empire State Building, 350 Fifth Avenue, New York 1, N. Y.

**UNITED STATES.** The area of the United States proper, or the 48 States and the District of Columbia, is 3,022,387 square miles; this excludes inland waters having an area of 45,259 square miles. The noncontiguous lands subject to the authority of the United States (Alaska, Hawaii, the Panama Canal Zone, Puerto Rico, Guam, the Virgin Islands, and American Samoa) comprise 596,006 square miles.

#### AREA AND POPULATION OF UNITED STATES, ITS TERRITORIES AND INSULAR POSSESSIONS

Political Division	Area Sq. miles	Population (1940 census)	Capital
United States	3,022,387	131,669,275	Washington
Alaska *	586,400	72,524 *	Juneau
Hawaii *	6,419	423,330	Honolulu
Puerto Rico	3,435	1,869,255	San Juan
Guam	206	22,290	Agaña
Samoa, American	76	12,908	Palo Pago
Panama Canal Zone <sup>b</sup>	553	51,827	Colon
Virgin Islands	133	24,889	Charlotte Amalie
Totals	3,622,795	134,265,231	

\* Territory. <sup>b</sup> Leased from the Republic of Panama in perpetuity. \* Census taken Oct. 1, 1939. \* Office of the Governor.

Note: The United States also possesses, or claims possession of, the following Pacific Islands: Baker, Howland, and Jarvis Islands, fringing the equator in mid-Pacific about 1,000 miles S S W from Honolulu; Johnston Island (q.v.); Midway Islands (q.v.); Palmyra Islands (q.v.); and Wake Island (q.v.). Canton Island (q.v.) and Enderbury Island are under joint Anglo-American administration.

The population of continental United States (Sixteenth Census) April, 1940, was 131,669,275. On Jan. 1, 1947, the population was estimated by

the Bureau of the Census to be 142,656,000. On October 1, 1946, the population, excluding armed forces overseas, was 140,984,000. See VITAL STATISTICS. For aliens, see IMMIGRATION. For populations of individual States, see STATES OF THE UNITED STATES.

**Events, 1946. The Year of Transition.** The first full year of peace after the conclusion of the greatest of wars, 1946 was for the United States as for all the world, a year of transition. The bloody strife of the battlefield was ended; it left in its wake a residue of conflict that pervaded every phase of the course of readjustment. The throes of transition appeared everywhere as the United States passed through the twelve months described by President Truman as "From War to Peace—the Year of Decision."

The people of the United States, in the first postwar year, groped for a return of the political, economic, and social stability, for the security, progress, and peace that had disappeared years back with the outbreak of the Second World War. Progress toward the goal was made, but every step was accompanied by a central core of conflict—the struggle between right and left.

In world affairs, the goal laid down by President Truman was "a lasting peace, with greater freedom and security for mankind in our country and throughout the world." Through the year, however, the readjustment toward a permanent peace was marked by distrust and suspicion, a constant and deep division that permeated the relations between the two great powers left preponderant by the war—the United States and the Union of Soviet Socialist Republics. On many of the basic issues of peace, of which the foremost was a solution of the momentous problem of controlling the atom bomb and other weapons, the ideological differences between capitalist America and communist Russia were numerous and far reaching. The clashes between the two countries carried over to internal affairs where it caused wide debate and a schism in the ranks of the Administration.

Nevertheless, the potentialities of atomic warfare, displayed by the United States in experiments in the peaceful waters of Bikini lagoon in the Pacific, and the steadily developing concept of countries working toward peace through world organization brought this country closer to its international objective. America's power and wealth were thrown in support of the amity of nations operating

through the structure of the United Nations. The United Nations emerged as a reality among governments, with a burgeoning organization, membership, and influence. By the end of the year it had established itself in its permanent capital in the heart of New York City, and showed promise of fulfilling the aims of America's foreign policy by taking an ever-expanding role for peace in the affairs of the Atomic Age.

The strength of America's participation in world affairs hinged on its domestic welfare and in 1946 the United States, the fountainhead of world economic currents, was itself torn internally by the struggle of transition from a war economy to a peace economy. In the process of painful readjustment from a controlled economic system to "free enterprise" there occurred great industrial unrest and economic confusion that was accompanied by a political upheaval at the polls. Conflict between the industrial right and the laboring left brought forth the greatest and most crippling strikes in the nation's history. As prices mounted steadily higher and inflation reached its peak, as shortages appeared and became aggravated, the issue of economic and production controls versus a "free" economy was fought out in the councils of Government and the mid-term elections.

In 1946, said President Truman, "we lay the foundation for our economic structure that will have to serve for generations." Despite the plethora of strikes, despite the zooming prices and an economic situation in which no one blinked at \$5,000 mink coats and talk was heard of a "basic" diamond necklace, the country made great strides in the completion of its domestic reconversion. Placing a seal on the conclusion of an era of "controlled economy" was an action by the Chief Executive at year's end in proclaiming the termination of hostilities in World War II. Although the action did not end the states of emergency proclaimed by the late President Roosevelt or the state of war itself, it emphasized the trend toward the relaxation of wartime powers by terminating the operations of a number of emergency statutes, including those governing the seizure of industrial plants and imposing special luxury and excise taxes. "The time has come," said the President, "when such a declaration can properly be made and it is in the public interest to make it."

The action came as the country appeared to be emerging from the throes of convalescence. There was virtually full employment, 6,000,000 more workers than when the ending of the war with Japan came and in the neighborhood of 15,000,000 more than in the prosperous year of 1939. The millions of discharged service men and women had largely been absorbed into the labor force, though many were taking advantage of veterans' benefits to continue learning and the population of American colleges bulged to 2,000,000, double that of the decade before.

The Civilian Production Administration found the country was "virtually out of the reconversion woods." The production of consumer goods was attaining and surpassing prewar rates in answer to what seemed to be an insatiable demand for automobiles, refrigerators, washing machines, and thousands of other articles. Business activity, sales, and profits were above the levels of the best prewar years. Consumers spent a record total of \$127,000,000,000 for goods and services during the year.

There was ready money for spending and it was spent freely. Controls became unpopular and the public demonstrated at the polls and in countless other ways its resentment at shortages of meats,

fats and oils, soap, and other items. Mobs of women no longer mobilized at year's end to obtain, at risk of life and limb, a pair of nylon hose. But feminine noses were turned up at silk stockings at \$4.00 a pair and similar consumer resistance kept mounting as prices advanced. Toward the end of the year the price level appeared to have reached its peak and the cost of food and of many non-durable goods edged downward.

In a year of extremes, fires, airplane crashes, and railroad wrecks took an unusually heavy toll. Fires took more than 10,000 lives and caused more than \$560,000,000 worth of property damage. Most horrible were the hotel fires, of which the flames that destroyed the Wincoff Hotel in Atlanta, Georgia, with a loss of 123 lives, represented the greatest toll of persons ever to perish in a hotel fire in this country.

**Foreign Policy.** In his "State of the Union" message to Congress as the year began, President Truman declared "the great and dominant" objective of American foreign policy was "to build and preserve" a just and permanent peace by using all its influence "to foster, support, and develop" the United Nations and to obtain "genuine understanding and active cooperation" among the most powerful nations.

At the beginning of 1946, however, Secretary of State James F. Byrnes was far from attainment of this goal; instead there was diplomatic conflict everywhere. Above all appeared the primary task of bridging the gap between the United States and Russia to establish the necessary firm basis for peace and security. The principal directions of this country's policy were in the completion of peace treaties for the Axis satellites and the strengthening of the United Nations as an effective world organization.

In September, there was affirmation of the "firm" policy which was attacked by Henry A. Wallace, former Secretary of Commerce. In a speech at Stuttgart urging establishment of a centralized German regime, Mr. Byrnes declared:

"We thought we could stay out of Europe's wars and we lost interest in the affairs of Europe. That did not keep us from being forced into a second World War. We will not again make that mistake. We intend to continue our interest in the affairs of Europe and of the world."

In the early fall, there were hints of a shift toward a more conciliatory attitude on the part of Russia that became more pronounced at the meetings of the Foreign Ministers and the United Nations General Assembly in New York in December.

By the end of the year the Foreign Ministers had completed treaties for the German satellite countries, reached general agreement on Trieste and the Danube and paved the way for treaties for Germany and Austria. In its direct international relationships, particularly vis-a-vis Russia, the United States' foreign policy had evolved toward a "modus operandi" that combined "patience and firmness" without bringing on any direct tests of power between the East and the West.

Also on the positive side of the ledger for 1946 in foreign affairs were these actions: intercession of the United States, through General George C. Marshall, special envoy, preserved a precarious balance between the contending forces in China and by extension in Asia itself, the world monetary organization began functioning; the commissions of the United Nations started grappling with the underlying causes of war; the United States made a large contribution to avert world-wide starvation. Finally, national unity, crystallized in the Wallace

episode, appeared in the ascendancy on foreign policy and the Republican party, preparing to assume control of the legislative branch of the Government, gave signs of forsaking its isolationist past and joining the Democratic party in a firm resolve to keep America's voice strong in international affairs.

**Atomic Energy.** The United States indicated early in 1946 its awareness of the potentialities of the atomic bomb and its accompanying Pandora's box of man-made horrors. At the meeting of the United Nations General Assembly in January, Secretary Byrnes offered a resolution for creation of an international atomic energy commission which was unanimously adopted. See ATOMIC ENERGY; UNITED NATIONS.

**National Defense.** Closely integrated to the course of the country's foreign policy and atomic developments were the year's events in the field of national defense, for the voice of the United States, in a period of transition, was gaged to a large degree by its military might.

"We still have the task," said the Chief Executive, "of clinching the victories we have won, of making certain that Germany and Japan can never again wage aggressive warfare, that they will not again have the means to bring on another world war. The performance of that task requires that, together with our allies, we occupy the hostile areas, complete the disarmament of our enemies and take the necessary measures to see to it that they do not rearm."

To individual GI's, the President's words registered little in relation to the desire to go home. A spate of "send-us-home" movements developed after the turn of the year. President Truman asserted that discharges were proceeding "with commendable efficiency" although the "critical need for troops has begun to slow down" demobilization. General Dwight D. Eisenhower, Chief of Staff, ordered the return home without delay of all men for whom there was no real military need. Nevertheless 20,000 GI's protested in Manila against the demobilization slow-down and demonstrations mounted abroad and at home, although General Eisenhower felt that the actions were blinding troops to the "real importance" of occupation duty. Congress, inclined to be sympathetic to the protests, shifted somewhat when the military warned that reduction in personnel depended on replacements through draft legislation, and Secretary Byrnes outlined to legislators a pessimistic picture of world conditions. With military leaders standing firm, the movement lost its momentum and gradually merged into the larger question of extension of Selective Service. By the end of the year, moreover, of the 12,000,000 men and women serving in the Army and Navy, about 10,500,000 had been demobilized.

In March, to meet the continuing need for replacements in the armed forces, President Truman and the military chieftains called for an extension of Selective Service. The move encountered much opposition from Congressmen who opposed a peacetime draft and felt that sufficient volunteers could be recruited or did not relish voting on the measure in an election year.

Selective Service was twice extended when it was on the point of expiration. A stop-gap measure continued the draft from May 15 to July 1 and a bill enacted June 29 extended it through 1947 after a bitter struggle between the Senate and the House over its provisions.

The compromise version finally approved carried these provisions:

ment providing for an 18½-cent wage increase and a royalty payment for the union's welfare fund.

Toward the end of May, after weeks of fruitless preliminary negotiations, two railroad unions, the Brotherhood of Railroad Trainmen and the Brotherhood of Locomotive Engineers, went out on a strike which paralyzed the country's rail transportation. The railroads were seized and the President threatened to call out the Army. After two days, while the President was before Congress appealing for emergency powers to cope with the strike, settlement was reached and the rail tie-up was called off.

The frequency of strikes, retarding reconversion and demonstrating the ability of key unions to cripple the whole industrial system, aroused in Congress demands for legislation restraining labor and these were embodied in the so-called Case bill. There was considerable wrangling between the House, which approved a stringent version, and the Senate, which favored a milder measure. Following the rail strike, the Senate swung toward the House view and Congress sent to the President a Case bill providing for the control of strikes by these means: a Federal mediation board empowered to intervene in major labor disputes and forbid strikes or lockouts for 60 days; civil suits for breach of contracts by either side; a ban on secondary boycotts by labor, and related labor-curbing provisions.

The Case bill, which aroused a storm of opposition from labor was vetoed in June by the President in a message stating it by-passed the underlying causes of labor strife, would cause an increase in disputes, and laid down severer penalties for workers than for employers. "Strikes against private employers cannot be ended by legislative decree," Mr. Truman maintained. "Men cannot be forced in a peacetime democracy to work for a private employer under compulsion." The veto was sustained by the House by five votes. See LABOR CONDITIONS.

Following the termination of price and wage controls, John L. Lewis made a bid late in the year to take the lead in wage increases. He demanded a new soft coal contract from the Government. Failing to receive it, on November 20 he defied a court order barring a work stoppage and ruled no contract existed. According to their traditional pattern of "no contract, no work," the miners left the pits. Mr. Lewis and the UMW were adjudged in contempt of court and fined a total of \$3,500,000, but the case was appealed to the Supreme Court and the strike continued. The Government stood resolute and threw its full power into the battle. As in the earlier coal strike drastic conservation measures were imposed to guard an alarmingly small coal supply and an appeal directly to the miners was planned by the President. Facing irreparable loss, the UMW leader capitulated on December 7, just five years after Pearl Harbor and directed his men to return to work until March 30, 1947. Although Mr. Lewis backed down, the issues raised by his action remained to be fought.

Two new weapons were brought into play by labor toward the close of the year. The CIO, planning a second round of wage increases, shunned strikes and sought persuasion. The organization adopted a report from an outside economist, Robert Nathan, former assistant director of the Office of War Mobilization and Reconversion, in which it was contended that industry generally could raise wages 25 percent out of profits without raising prices. The report became the basis for contract negotiations by CIO unions.

The other evolved from a Supreme Court decision in the case of a Michigan pottery plant, directing payment of back pay for time spent in "on-the-premises" activity although not actually spent "at the bench." The time spent in such "portal-to-portal" or "gate-to-gate" activity became the basis for suits by unions for back compensation. During the final months of 1946, the suits mushroomed and mounted to billions of dollars claimed in retroactive pay.

**Stabilization.** While labor was exerting pressure upon wages, industry was simultaneously pressing for the elimination of price controls. When Congressional committees, early in February, started hearings on the extension of the Price Control Act, destined to expire June 30, the action touched off a powerful campaign by virtually all segments of industry, business, and agriculture to abolish or limit drastically the operations of the Office of Price Administration.

The year had begun with practically all price controls still in effect, though rationing had been almost completely eliminated. Living costs had risen only fractionally during the war and through V-J Day. In February, however, a dent in the cost-of-living line that had been held since 1943 developed when the President announced a new wage-price policy, under which ceiling prices were raised to reflect higher labor and material costs resulting from widespread wage increases. The action caused the OPA to grant many industry-wide increases, to change its required absorption by sellers of cost rises, and to pass more and more of these on to consumers.

Although the war was over, proponents of price control, noting the reservoir of pent-up consumer demand, and the great amounts of savings and money in circulation, urged extension of OPA to combat a dangerous inflationary situation. Chester Bowles, former OPA Administrator and Director of Economic Stabilization, was the protagonist of the anti-inflation campaign to check a "boom and bust" cycle.

Accumulated resentment over wartime controls was aired in Congress. There were charges that price restrictions were hampering production, keeping urgently needed materials out of the markets. Black markets were thriving on scarcities, and steaks, chops, nylons, even poultry, and hundreds of other consumer commodities were obtainable for the most part "under the counter." OPA's enforcement efforts were inadequate against illegal dealers, ready cash, unsatisfied demand, and continuing shortages.

After months of bitter controversy in committees and in Congress itself, during which the legislators gave no heed to the Administration's appeal for extension without "crippling" amendments, a greatly modified price control extension bill was sent to the President a few days before the law's expiration. Chester Bowles resigned, saying the "booby trap" provisions in the bill would make price control unworkable. On June 29, President Truman, directing his main fire against the "bonanza formulas" sponsored by Republican Senators Taft and Wherry, vetoed the bill as a "choice between inflation with a statute and inflation without one."

For the greater part of July the public lived under a control hiatus. During the OPA holiday prices and rents zoomed, although scarcities disappeared. On July 25, a new OPA extension act became valid. The new measure, shifting emphasis from control to decontrol, liberalized ceiling prices, gave the Secretary of Agriculture control over agricultural commodities, established a Price Decontrol Board

with final authority, and circumscribed subsidy payments.

In the wake of the new measure there came a flood of decontrol actions by the OPA and countless price increases, but a new crisis arose in meat. Cattlemen, rebelling at the restoration of meat ceilings, held back their animals and meat vanished from butchers' counters by early fall. After several weeks of resistance to the mounting pressure from meat-hungry consumers and from the impact of the situation on the coming elections, President Truman yielded on October 14 and removed meat ceilings.

This was the break in the price control dike. Decontrol of other commodities followed rapidly and on November 9 the Chief Executive abandoned all price and wage controls with the exception of those on rents, sugar, and rice, declaring as the battered wartime stabilization program came to an end, "The law of supply and demand operating in the market-place will, from now on, serve the people better than would continued regulation of prices by the Government."

Commodities became plentiful again—and more expensive. The Bureau of Labor Statistics reported that price rises during 1946 were the highest for any year since World War I and six to nine times as great as in the last three years of the Second World War. Retail prices of family living essentials rose 18 percent, of which 15 percent took place in the last six months of the year. Food at retail rose by 34 percent in 1946. Non-agricultural commodities, which climb and decline more slowly than "sensitive" agricultural prices, rose 22 percent during the year.

In the closing days of the year, however, following the greatest splurge of Christmas shopping in the nation's history, there were omens of a price break as the cost of many food and clothing items—from eggs to mink coats—dropped substantially throughout the country.

**Housing.** The Government's emergency housing program for veterans, launched early in the year to meet the urgent need of returning servicemen, was cancelled on November 9 when the President failed to follow the recommendations of Wilson W. Wyatt, then Housing Expediter, and exempt in his general decontrol order controls on building materials.

In launching the emergency program Expediter Wyatt held that there would be a need for accommodations for 2,515,000 families, not counting 1,200,000 families living "doubled up" with others. He proposed a comprehensive program for placing 1,200,000 low- and medium-priced dwelling units under construction in 1946 and an additional 1,500,000 in 1947. The program was implemented by emergency measures for premium payments to spur the production of building materials, government guarantees of markets for new materials and for prefabricated houses, additional government financing of low-cost housing, and broad authority to the Housing Expediter to direct other Federal agencies to stimulate the production of housing.

Other steps in the Government's offensive against the housing shortage included limitation of non-residential construction, allocation of needed raw materials for the output of building materials, priorities on building materials and ceilings of \$10,000 for the sale of a new house, and an \$80 rental maximum and veterans' preferences.

President Truman transmitted the program to Congress with his unqualified support, and in May it was approved substantially in the form desired by the Administration. Aided by the regulations

and powers granted by Congress, the Wyatt program achieved 1,000,000 started and about 700,000 completed units, including permanent dwellings, temporaries, conversions and prefabricated. Many building materials were still in short supply but the program definitely broke the bottlenecks in this field and effected considerable advances in production.

The building industry bitterly opposed the Wyatt program as a deterrent to construction. Critics also argued that the achievements fell short of meeting demand and that the program failed to provide housing at prices veterans could afford to pay.

The President rejected Mr. Wyatt's insistence on a strengthening of the remaining features of the emergency program, with wages and prices decontrolled, and accepted his resignation in the fall. The President then laid down a new housing policy which shifted the responsibility for providing veterans' dwellings to private industry. Restrictions were eased or nullified, ceilings on new houses were abandoned, but it was promised that no change would be made in the objective of housing veterans and that more rental construction would be stimulated.

**Elections.** A political axiom that the voters do not "change horses" in times of prosperity was upset during the year. In the off-year elections the Republican party scored a victory of landslide proportions over the incumbent Democratic majority.

Despite the prosperous times there was much dissatisfaction to draw away strength from the Democrats. Most of the country was restive at continuing controls and with recurring shortages which were inexplicable when the exigencies of war were past. The campaign slogan developed by the G. O. P.—"Had Enough, Vote Republican"—struck a strong responsive chord among the electorate. On the other hand the Democrats antagonized many who, squeezed by rising prices, felt that the Administration had failed to support stabilization. The economic confusion was translated into anti-Democratic votes.

There was conflict also within the Democratic cohorts between followers of the late President Roosevelt's New Deal and the so-called "Missouri gang," close advisers of the Chief Executive and generally conservative in viewpoint. There was also a break between the President and the left wing of his party which came to a head with the resignation of Henry Wallace. The strong labor element in the Democratic party turned cool toward the Administration. Labor accused the President of "lip service" to its cause without fighting for it. Left-wing Democrats supported labor's view. Contrariwise labor's frequent use of the strike weapon proved potent in alienating many voters from the Democratic party.

With the Administration's fumbling over shortages of meat and consumer goods, over the housing program, with strikes, price control, and lagging reconversion, to note the year's outstanding gripes, the election on November 5 represented the lowest point in the President's prestige. Then, too, the magical vote-getting powers of the late President Roosevelt were absent.

The election results stamped an end to the New Deal that had held sway in the country for 13 years. The heterogeneous political machine welded by Franklin D. Roosevelt from Southern conservatives, liberal idealists, and vote-producing big-city machines had been disintegrating since his death in April, 1945. The remnants were now swept away by the voters.

The Republicans gained control of both houses

of Congress: a gain of 12 seats in the Senate for a total of 51; in the House a gain of 56 for a total of 245, well over the 218 necessary for a majority. Republican governors were elected in 25 states.

A total of 35,874,568 persons voted, an increase of 5,849,641 over that cast in the wartime off-year election of 1942 but 1,429,812 under the record for off-year balloting established in the previous peacetime year of 1938.

The Democratic machines in Chicago and Boston were severely buffeted and even Mayor Frank Hague's Jersey City machine was unable to stem the Republican tide in New Jersey. Only Tammany, in New York City, came through with but minor bruises.

The elections turned brighter spotlights on potential Republican candidates for President in 1948. Governors Thomas E. Dewey of New York and Earl Warren of California were overwhelmingly re-elected. Also mentioned prominently were Republican Senators Taft and Bricker of Ohio; and Vandenberg of Michigan. Former Governor Stassen of Minnesota formally announced his candidacy for the Presidency.

A proposal by Senator J. William Fulbright, Democrat of Arkansas, that President Truman, lacking support in Congress, resign in favor of a Republican caught momentary public attention but no official recognition. Instead President Truman pledged his cooperation with the incoming Congress and appealed especially for continued operation of a bi-partisan foreign policy. He asked both parties to exercise "wisdom and restraint" to avoid the "serious difficulties" of divided Government control.

**Appointments.** One of the factors that contributed substantially to the Democratic defeat at the polls was the dispute between the President and the leader of the left wing of the party, Henry A. Wallace, then Secretary of Commerce. The issue was brought out in a dispute over foreign policy two months before the elections. In a speech in New York City on Sept. 12, Mr. Wallace criticized the "get tough with Russia" policy. In Washington, the President said he had read the speech and endorsed it. A furor of reaction followed and Mr. Truman issued a clarifying statement saying there was "no change" in foreign policy and that he supported the Wallace right to speak without intending to indicate that "I approved the speech as constituting a statement of the foreign policy of this country." As the controversy continued, the President on Sept. 20 asked for Mr. Wallace's resignation because of a "fundamental conflict" between his and the Administration's views on international affairs.

The other member of the Roosevelt "Old Guard" to leave the Cabinet was Harold Ickes, Secretary of the Interior. Mr. Ickes resigned in February as a result of a clash with Mr. Truman over the latter's nomination of a California oil-man and Democratic chieftain, Edwin W. Pauley, as Under Secretary of the Navy. Mr. Ickes, maintaining that Mr. Pauley had submitted the "rawest proposition ever made to me" in connection with California oil lands, declined to support the nomination before a Senate Committee. Julius A. Krug, former head of the War Production Board, succeeded Mr. Ickes while Averell Harriman, former ambassador to Russia and Great Britain, replaced Mr. Wallace.

Another Presidential appointment that caused some Congressional disapproval was that of his close friend George E. Allen as a director of the Reconstruction Finance Corporation. Mr. Allen resigned after a year's service.

In other appointments Fred M. Vinson, the Secretary of the Treasury, was named Chief Justice, filling the vacancy left by the death of Chief Justice Harlan Fiske Stone in April. The appointment was preceded by an open row between Justices Jackson and Black. John W. Snyder, serving as director of the OWMR was named Secretary of the Treasury.

**The Administration and Congress.** The seventy-ninth Congress came to an end in 1946 after having covered a course from war through victory to reconversion. During its session its record was one of close cooperation with the Executive branch in foreign affairs and consistent bickering on domestic issues. Although the President's party was numerically in control of Congress, both the Senate and the House were dominated by a coalition of minority Republicans and Southern Democrats who frequently united to block the recommendations made by Mr. Truman. The Congress, to the right of the President, regarded many of his urgent legislative proposals with tolerance and indifference; when it came down to cases, most of the proposals took severe beatings. As a result consideration of national affairs was highlighted by frequent clashes between President Truman and his former colleagues, reflected in outright Congressional rejection of close to half of his major proposals and compromises of many others.

One of the major problems of the seventy-ninth's second session was the necessity of legislating to deal with developing postwar emergencies. Legislation was handicapped also by a barrage of propaganda and lobbying by various interests seeking to sway the legislators toward a given policy. Many legislators, accustomed to a minimum number of programs at one time, objected, too, to the voluminous and diffuse barrage of Presidential programs which poured from Mr. Truman in a volume that appeared to defy absorption and consideration.

At the beginning of the year, President Truman told Congress the domestic goals of "expanded production and steady, well-paid jobs and purchasing power" were a "long way" from attainment and stressed the desirability of Congressional cooperation. He recommended the following 21 acts of legislation:

- Legislation to authorize the President to create fact-finding boards for the prevention of strikes in nation-wide industries after collective bargaining and other forms of settlement failed
- Enactment of a full-employment bill
- Liberalization of unemployment insurance benefits
- Adoption of a permanent fair employment practices act.
- Provision for a comprehensive program of scientific research
- Legislation raising the minimum wage level.
- Enactment of a health and medical care program.
- Adoption of a program for universal training
- An adequate salary scale for Federal employees.
- Provision for Presidential succession.
- Unification of the armed services
- Legislation for the domestic control of atomic energy
- Retention in the Federal Government of the United States Employment Service to June 30, 1947.
- Social security coverage for veterans for service period.
- Supplementing of unemployment insurance benefits provided by the states.
- Extension of crop insurance
- Permission to sell surplus ships
- Provision for the stock piling of strategic materials.
- Repeal of the Johnson Act blocking foreign loans
- Enactment of Federal airport legislation.
- Legislation for the development of the Great Lakes-St. Lawrence River basin

In addition to these, the President made a number of other recommendations during the year, some of which have already been discussed above, such as emergency housing legislation, price control, and labor measures.

Major measures approved by Congress were:

A far reaching measure entitled the Employment Act of 1946 which provided for an annual economic report by the President and a Council of Economic Advisers of three members representing a compromise from Mr. Truman's "full employment," the measure was designed to use all means to maintain "maximum employment" and avoid depressions.

An equally outstanding measure was modernization of the creaking machinery of the legislative branch through reorganization and streamlining. The number of standing House committees was cut from 48 to 19 and of Senate committees from 33 to 15. Registration of lobbyists became mandatory. Salaries of legislators were raised from \$10,000 to \$12,500 annually plus a \$2,500 tax-free expense allowance. Members of Congress became eligible for Civil Service retirement.

The pay of Federal judges was increased from \$10,000 to \$15,000 and Federal employees got a raise of 14 percent.

The President was granted broad powers to reorganize Federal agencies and Congress accepted two proposed reorganizations: the centralization of welfare activities into the Federal Security Agency and the transfer of functions among various agencies. A third, to unify all Federal housing activities, was defeated.

Powers of the Government to allocate and ration scarce commodities were continued through extension of the Second War Powers Act.

The Federal-aid school lunch program, operating on an emergency basis for a decade, was made permanent.

A General Hospital bill, authorizing expenditure of \$375,000,000 over five years to build new hospitals and improve old facilities, was approved.

Administration of the disposal of war surpluses was centralized.

A formula was approved for the sale of surplus vessels. The President was authorized to acquire and build up stockpiles of strategic war materials.

The UNES was returned to the states in November instead of June, 1947 as recommended by Mr. Truman.

Provisions of GI insurance legislation were broadened. The GI Bill of Rights was liberalized to foster greater use of the schooling provisions.

On international matters Congress went down the line with the President, approving the following:

Ratification of the United Nations Charter  
Authorization for participation in international monetary arrangements.

Appropriations for the United Nations Relief and Rehabilitation Administration.

Extension of legislation for reciprocal trade agreements.  
A loan of \$3,750,000,000 to Great Britain.

Authorization of a broad program of cultural relations with foreign countries, including the exchange of educational and scientific information.

Congress scrutinized with more care than in the last dozen years appropriation estimates by the Executive. The ceiling on the national debt was reduced from \$300,000,000,000 to \$275,000,000,000. War expenditures were sharply curtailed. The excess profits tax was repealed and income taxes were modified slightly. The old-age and survivors insurance tax was frozen for another year at the existing rate.

The Budget for the fiscal year 1947, submitted by the President in January 1946, estimated expenditures at \$35,100,000,000, receipts at \$31,500,000,000 and the deficit at \$3,600,000,000. The deficit for the fiscal year 1946, then half over, was placed at \$28,800,000,000 but the President later announced this estimate was too high by \$7,000,000,000. "We are on the way toward a balanced budget," Mr. Truman said. "It is the aim of our fiscal policy to balance the budget for 1947." Total war expenditures of the United States from June 30, 1940 to June 30, 1946 were estimated at \$339,000,000,000 or \$2,431 per capita. As of June 30, 1946, the public debt was placed at \$269,422,009,173.

Administration bills that failed to pass during the year included:

Army-Navy unification; universal military training; a permanent fair employment practices law; social security expansion; fact-finding labor disputes boards; the President's emergency strike-control program; liberalization of unemployment compensation benefits; an increase in the minimum wage; establishment of a Federal health and medi-

cal care program; expansion of crop insurance; Federal aid to education; adoption of a long-range Federal housing program; establishment of a national coordinating science agency; designation of the Speaker of the House as successor in event of the death of the President and Vice President; provision for the Great Lakes-St. Lawrence waterway; establishment of military cooperation with other American countries, primarily for the standardization of equipment; authorization for military missions to foreign countries; and repeal of the Johnson Act on foreign loans.

In addition to actual legislation, Congress conducted scores of special inquiries and investigations, the most prominent of which were these:

The Joint Committee to Investigate the Pearl Harbor Attack, after an inquiry of many months, submitted its conclusion to Congress on July 20. The majority report, approved by six Democrats and two Republicans, placed the blame upon Japan and exonerated President Roosevelt and his chief Cabinet officials and military leaders. A minority report by two Republicans charged the late President and his principal advisers with "failure to perform responsibilities essential to the defense of Pearl Harbor." Both reports attributed to the Army and Navy commanders of the base culpability for errors of judgment but not dereliction of duty.

An investigation by the Senate Special Committee to Investigate the National Defense Program (the former Truman committee) into alleged war contract profiteering brought out sensational disclosures of the machinations of the Garsson brothers in building up, during the war a \$78,000,000 "munitions empire" out of virtually nothing. Representative Andrew J. May of Kentucky, chairman of the House Committee on Military Affairs, was mentioned prominently during the course of the inquiry.

The same committee investigated in December charges that Senator Theodore G. Bilbo of Mississippi had accepted gifts from war contractors. After hearings, during which contractors told of gifts to the Senator out of sheer benevolence, a majority of the committee held that Mr. Bilbo had accepted \$25,000 in gifts; had "misused his high office;" and had violated the Hatch Act barring political contributions by Government contractors. It recommended that the Senate take appropriate action.

**Production.** The great accomplishment of the year was the completion of domestic reconversion from war to peace. The strikes occurring with monotonous regularity tended to conceal the achievement but the work done throughout the year overshadowed the layoffs and the production of the nation's farmers and workers mounted to new peacetime levels.

During 1946 industrial production was consistently 50 percent above the 1939 pre-rearmament levels. During the second half of 1946, despite bottlenecks, shortages of materials, work stoppages, and other retarding factors, production reached higher rates than ever seen in a peacetime year.

The American people ate more food per capita than in any previous year, even though in some cases they were unable to buy exactly the kind of food they desired. Goods scarce during the war began to fill dealers' shelves. In general, people were supplied with more goods and services than ever before. The production of food, clothing, and other non-durable goods reached the highest level on record during 1946. The Federal Reserve Board's index of production of non-durables averaged 163 (1936-39 equalling 100), comparable

to an index of 166 in 1945 when military needs absorbed a significant part of the total.

Steel, basic to the economy, rolled out in a tonnage unequalled in any year prior to 1940 and, despite major strikes, amounted to 65,800,000 tons of ingots and steel for castings. Output of other basic materials such as coal, oil, paper and textiles also was high. Lumber and many other building materials, urgently needed for housing, recovered from early production slumps.

The production of many of the durable goods so eagerly sought by consumers surpassed prewar levels; particularly radios, washing machines, vacuum cleaners, and electric ranges. Principal exceptions were automobiles, refrigerators, and sewing machines. Automotive production totaled slightly over 3,000,000 passenger cars and trucks, well below the best peacetime years but equal to the rate for 1940 and 1941.

**Income.** The national income was at an all-time peak. Income payments to individuals in 1946 were estimated at \$164,000,000,000 compared with \$161,000,000,000 in 1945. This total includes wages and salaries, dividends, interest, mustering-out pay, veterans' benefits and other forms of compensation.

**Spending.** Consumers spent a record total of \$127,000,000,000 for goods and services in 1946, almost 20 percent above 1945 and about 70 percent over the prewar peak year of 1941. The largest share of the increase occurred in expenditures for non-durable goods, which absorbed more than their normal peacetime proportion of the consumer dollar. Purchases of non-durables, such as food, clothing, tobacco and gasoline, totaled \$77,000,000,000. Expenditures for durable goods, such as furniture, household appliances, automobiles and jewelry were estimated at \$14,000,000,000. Part of the high level of expenditures was attributable to higher prices.

**Employment.** Civilian employment approached 58,000,000 during 1946. If those in military service were included, total employment exceeded 60,000,000. Civilian employment was the highest the nation had ever known—10,000,000 more than in 1940 and several million above the wartime peak. Unemployment hovered around the 2,000,000 mark during the year. The absorption of personnel released from military duty into civilian capacities was generally accomplished smoothly. Less than a year and a half after V-J Day, more than 10,000,000 veterans and other millions of war workers had been absorbed into peacetime production.

SAMUEL A. TOWER.

**UNIVERSITIES AND COLLEGES.** More than 2 million students, a fifty percent increase over the previous peak enrollment, were attending the 1,749 colleges and universities of the United States at the opening of fall terms this year, according to the Federal Security Agency of the United States Office of Education. The present student load is more than double the 952,000 enrollment at the opening of fall terms a year ago. Hence, enrollments in higher educational institutions have approximately doubled in the past year.

In the fall of 1945, there were fewer than 50,000 veterans enrolled in higher educational institutions. This year there are 1,080,396 veterans enrolled, or approximately one-half of the present total number of students.

A record of fall enrollment over the period beginning with 1939 appears in table 1. Statistics for earlier years are based upon a similar survey made by the Office of Education last year.

TABLE 1—ESTIMATED FALL ENROLLMENT IN HIGHER EDUCATIONAL INSTITUTIONS, 1939-1946

School Year	Fall Enrollment
1939-40 . . . . .	1,360,000
1941-42 . . . . .	1,263,000
1943-44 <sup>a</sup> . . . . .	738,000
1945-46 <sup>b</sup> . . . . .	952,000
1946-47 . . . . .	2,078,000

<sup>a</sup> Does not include 294,000 military personnel enrolled.

<sup>b</sup> Does not include 88,000 military personnel enrolled.

In table 2 the 2,078,095 total enrollment is distributed among the six categories of institutions. Also shown in table 2 are enrollments of veterans, a total of 1,080,396. Approximately one-half of all students and approximately one-half of veterans are enrolled in the 131 larger institutions (group 1).

TABLE 2—ESTIMATED FALL ENROLLMENT IN HIGHER EDUCATIONAL INSTITUTIONS, TOTAL AND VETERANS, BY TYPE OF INSTITUTION, 1946

Type of Institution	No. of Institutions <sup>a</sup>	Fall Enrollment	
		Total	Veterans
All institutions . . . . .	1,749	2,078,095	1,080,396
1 Universities and large institutions of complex organizations . . . . .	131	1,031,430	591,468
2 Colleges of arts and sciences . . . . .	557	439,449	194,570
3. Independent technical and professional schools . . . . .	287	210,176	129,238
4. Teachers colleges and normal schools . . . . .	201	150,059	61,780
5. Junior colleges . . . . .	468	188,139	85,124
6. Negro institutions . . . . .	105	58,842	18,216

<sup>a</sup> Total number of institutions from which sample was drawn may not be exact count of institutions in existence by common definition.

Before the war approximately one-third of annual college enrollment reported consisted of students in college for the first time. Figures on that part of the total enrollment represented by students the first time in any college are important as an indication of the accession rate to college, whether directly from secondary schools or after interruptions through service in the armed forces. Table 3 shows fall enrollment for the various types of institutions by that part which is represented by students entering college for the first time, and that part which is represented by students previously in college (table 3 is on p. 716).

It is of importance to note that the proportion of new students among men is higher than among women. This is due chiefly to the fact that the normal flow of women through college has not been interrupted during the war period.

Seventy percent as many new students (119,000) this fall are enrolled in junior colleges as in colleges of arts and sciences (163,000), and 44 percent as many as in universities and large institutions of complex organization (269,000). This is very significant since the aggregate enrollment in universities and colleges is much greater than that in junior colleges. Approximately 65 percent of the men and 61 percent of the women in junior colleges are new students. There is evidence, therefore, that the junior colleges have served as a means of accommodating beginning students.

It is of note, nevertheless, that the largest number of new students are enrolled in the 131 large institutions. The percentage of students entering college first time in Negro institutions is high, men 44 percent, women 31 percent.

Increases in enrollment of men and women students over 1945 are shown in table 4 (see p. 716). The significant contrast in this table is the increase in men students (294 percent) as compared

(continued on page 716)

with the increase in women students (17 percent). The distribution of the increase in women students is about the same between those entering college first time and those who have been in college before.

TABLE 4—ESTIMATED INCREASE IN FALL ENROLLMENT, MEN AND WOMEN STUDENTS, 1945 AND 1946

Item	Fall 1945	Fall 1946	Increase Amount	%
All Students	926,000*	2,078,095	1,152,095	124
Entering college first time	291,000	696,419	405,419	139
In college before	635,000	1,381,676	746,676	118
Men	360,000	1,417,595	1,057,595	294
Entering college first time	121,000	499,532	378,532	313
In college before	239,000	918,063	679,063	284
Women	566,000	660,500	94,500	17
Entering college first time	170,000	196,887	26,887	16
In college before	396,000	463,613	67,613	17

\* Does not include an estimated enrollment of 26,000 not distributed.

Although almost two-thirds of the one million increase in enrollment of men over last year consists of those who have been in college before, the highest relative increase (313 percent) has been in enrollment of men in college for the first time, from 121,000 in the fall of 1945 to 500,000 this fall.

There is a significant tendency for relatively more men and veterans to be enrolled in publicly controlled institutions. This difference is not great among the 131 universities, but is marked in the junior college group. Of total fall enrollment in publicly controlled junior colleges 70 percent are men and 50 percent are veterans. In privately controlled junior colleges men are 51 percent and veterans 33 percent of total enrollment.

The statistics reported to this YEAR BOOK by each of the accredited institutions for the latest available year are shown in the table on pages 695-715.

**URANIUM.** Under the terms of the Atomic Energy Act, passed in July, control in the United States of the raw materials and lands producing uranium and thorium passed under the control of the all-civilian Atomic Energy Commission.

Control of similar deposits in Mexico by the government was decreed October 16. New deposits of uranium-bearing ore were discovered in Chihuahua. See ATOMIC ENERGY.

**URUGUAY.** A South American republic. Area: 72,172 square miles. Population: 2,250,820 (1946). Capital: Montevideo.

Uruguay is mostly a land of hills and rolling plains, with coastal lowlands on the south and east. Annual temperatures range from about 50 degrees to about 72 degrees.

**The People.** Ninety percent of the population of Uruguay consists of persons of European descent; most of the rest are mestizos. Densities of population range from 12.7 per square mile in the Department of Artigas to 108.6 in the Department of Canelones. Greatest density is in the southern littoral; elsewhere the population is evenly but thinly distributed. The largest cities are: Montevideo, 750,894; Paysandú, 50,000; and Salto, 48,000.

The official language is Spanish. Roman Catholicism is the predominant religion.

In 1943 there were a total of 245,129 students in 1,800 primary schools, 98 intermediate schools had a total enrollment of about 27,000 students. In 1940 the National University had 6,061 students. The Uruguayan Government in 1944 authorized expenditure of 10,000,000 pesos for city and rural school construction throughout the republic.

**Government.** Under the Constitution of 1934, Uruguay is a centralized republic of 19 departments. The Congress is bicameral, with a Senate of 30 members and a Chamber of Deputies of 99. Members are elected every 4 years. The Congress meets annually from Mar. 15 to Dec. 15, except in election years. The President is elected for a 4-year term and may be reelected after a lapse of 4 years. A Cabinet of 9 members aids the President. President-elect Tomas Berreta assumed office March 1, 1947.

**Events, 1946.** As the year opened Uruguay found relations with Argentina growing strained. The immediate tension resulted from the circulation of the "Larreta Doctrine" late in 1945. Uruguay's Foreign Minister, Rodriguez Larreta, proposed that all American republics act jointly against any American republic that violated democratic rights. No specific methods were suggested and the character of the action of intervention was left open to intergovernmental discussion.

A further contributing factor to the uneasy relations was that Uruguay permitted Argentine political refugees to indulge in anti-Perón propaganda. On April 23 Argentine Ambassador Gregorio Martinez referred to Foreign Minister Larreta "as a puppet of the United States who stabbed Argentina in the back." Simultaneously, Argentina cut Uruguay off from all wheat exports, creating a situation that resulted in the resignations of Minister of Labor Rafael Schiaffina and Minister of Education Daniel Castellano. Both men refused to concur in the formulation of a decree rationing bread. With the realization that wheat stores would be exhausted by June, the Uruguayan Government requested 50,000 tons of wheat from the United States. Late in April the United States agreed to make shipments of 8,000 tons of wheat in May. After the United States agreed to help Uruguay, Argentina technically resumed wheat shipments.

Argentina also left no doubt of her political

interest in Uruguay, especially in regard to the forthcoming November Presidential election, and indicated her support of Luis Alberto de Herrera, a vigorous admirer of Argentina's President, Juan D. Perón and leader of an ultranationalistic party. On April 25 the Argentine Embassy in Washington denied there was any political pressure involved in Argentina's refusal to Uruguay's request for 100,000 tons of wheat.

On July 1 a plot by military and police factions to seize control of the Government was smashed and the leaders arrested. Details of the abortive coup were announced by Dr. Juan J. Carbajal, Minister of the Interior, who said Col. Estebán Christi, former chief of the Uruguayan air force, planned the undertaking. Among those arrested in the carefully planned raids in Montevideo, were eight army officers, six police officials, and several civilians. Christi had contributed numerous articles to *Debate*, the wartime pro-Nazi newspaper of Herrera's party. The Herrerista national committee, however, denied any connection with the plot. During the process of rounding up the suspects, the army had been placed in a state of alert, but no units were brought into Montevideo. Inspiration for the plot was attributed to the APRE (*Asociación Pro-Renovación del Espíritu*), a secret organization of military officers who admired the totalitarian regime of former President Gabriel Terra.

Uruguay and the Soviet Union negotiated a three-year trade agreement on August 9, based upon the most-favored-nation treatment and calling for an exchange of Russian coal, lumber, and oil for Uruguayan fats, vegetable oils, meat, and wool. The treaty, the first of its kind to be arranged by the Soviet Union with a Latin American country, was viewed as a precedent for other Russo-Latin American commercial pacts.

During September preparations for the Presidential campaign grew more active. On September 29, the Herrerista National party selected its party leader, Luis Alberto de Herrera, as Presidential candidate and Dr. Martin Etchegoyen as Vice Presidential candidate. Within a week the Administration's party, Colorados Batllistas, nominated Public Works Minister Tomas Berreta and Congressman Luis Batlle Berres as its Presidential and Vice Presidential candidates. Other candidates in the Presidential race included Colorado-supported former President Alfredo Baldomir and former Minister of Labor Rafael Schiaffino, the Independent Nationalists' Alfredo Garcia Morales, the Catholic party's Joaquin Seco Fila, the Socialists' Dr. Emilio Frugoni, Ambassador to the Soviet Union, and the Communists' Pedro Cerruti Crosa. Despite the three candidates on the Colorado ticket the vote would not be split, because the electoral system provided that the candidate receiving the largest number of votes will be regarded as having all the votes cast for members of his party.

At the same time there existed the likelihood that no candidate would assume the Presidency. At the polls on November 24 voters would also decide on a Constitutional amendment providing for the establishment of a "collegiate system"—something based on the Swiss cantonal system—which would replace the President with an executive council of nine members.

By November 25 the election results showed a victory for Berreta. Although Herrera polled 169,728 votes to Berreta's 165,968, the total vote for the Colorado party was 264,626. Herrera's party gained 176,628; the Independent Nationalists, 52,121; the Catholic party, 31,574, and the Communists 29,141. The proposed amendment in favor of

the collegiate system was defeated. The Colorado party won control of both houses of Congress, but lost ten seats in the Chamber, while the Herreristas gained seven seats in the Chamber and won control of several municipalities formerly held by the Colorados. Interpretation of the election results from Uruguay indicated that Herrera had won a moral victory by polling more votes than any other single candidate.

On December 30 Uruguay signed a commercial treaty with Argentina providing for the construction of a power project which would provide both countries with low-rate electricity and irrigation for vast areas.

**National Economy.** Uruguay's economy is pastoral and agricultural. Stock raising is the most important industry. Meat and meat products, wool, hides and bristles are major exports of the country. Other pastoral exports include dairy products, casein, and cheese. Cattle slaughtered in 1944 totaled 636,318 head. Production of tanned cattle hides and sheepskins totaled 1,062,052 pieces during 1944. Agriculture is the second industry in importance. Wheat, corn, oats, and linseed are the leading domestic crops. Other crops are grapes, tobacco, peaches, oranges, and pears.

In addition to meat packing and processing (freezing, canning and dehydrating), Uruguay manufactures a wide variety of goods. Among the most important are: cotton and woolen textiles, electrical machinery, batteries, transformers, refrigerators, automobile tires and tubes, furniture, enamelware, glass, and glassware, wines, and pharmaceuticals.

**Foreign Trade.** Uruguay's exports in 1944 reached a total value of \$97,559,000. Wool was the chief export commodity, and accounted for 41 percent of the total value of all exports; meat and meat products ranked second amounting to 30.5 percent of total value; hides and bristles 11.4 percent. The United States was the leading purchasing country, and took 47.7 percent of the total exports in 1944; Great Britain came second, purchasing 32 percent of the total; Brazil took 3.5 percent, and Argentina 2.8 percent. Venezuela, Mexico, Peru, and Ecuador together bought about 1.6 percent of the total. The leading Uruguayan exports in 1944, according to value, were: wool, \$40,919,000; meat and meat products, \$29,721,000; hides and bristles, \$11,133,000; agricultural products, \$5,972,000; yarn, thread, textiles and their manufactures \$5,056,000; mineral products, \$2,220,000, miscellaneous manufactures, \$1,866,000.

Uruguay's imports in 1944 were valued at \$72,446,000, approximately 13.5 percent higher than imports in 1943. Raw materials accounted for 30.7 percent of total imports; fuels and lubricants 20.3 percent, and foodstuffs, 13.5 percent. The United States furnished 26 percent of Uruguayan imports in 1944; Brazil 22.2 percent, and Argentina 12.8 percent. Venezuela, Ecuador, Peru, Paraguay, Chile, Mexico, Cuba and Colombia together supplied an aggregate of 19.7 percent. The leading import commodities for 1944 listed according to value were: raw materials, \$22,199,000; fuels and lubricants, \$14,721,000; foodstuffs \$9,781,000; general merchandise \$7,612,000; construction materials \$7,061,000; general machinery and parts, \$1,741,000; hardware, \$1,463,000; drugs and chemicals \$1,160,000.

Imports for 1945 were \$114,800,000 of which the United States provided \$29,100,000; Brazil \$19,300,000; Argentina \$11,800,000; and Great Britain \$4,500,000.

JOSEPH P. BLANK.

**VATICAN CITY.** A sovereign state, officially called the State of Vatican City, established within the city of Rome as the seat of the Papacy (June 10, 1929) in accordance with the Italo-Vatican (Lateran) Treaty of Feb. 11, 1929. Ruler: The Supreme Pontiff, Pius XII (Eugenio Pacelli), born in 1876; elected Pope (262nd), as successor of Pius XI, Mar. 2, 1939; crowned Mar. 12, 1939.

The area of Vatican City is 108.7 acres, including St. Peter's Square, and in addition 13 ecclesiastical buildings outside of its limits enjoy extraterritorial rights. It has its own coinage, import duties, railway station, and its postal, telegraph, and radio facilities. The estimated population in 1941 was 970. Under the Constitution of June 7, 1929, the Pope exercises full legal, judicial, and executive powers. He delegates administrative authority within Vatican City to a Governor, who is assisted by a counselor general and other officials. The legal system is based on canon law and ecclesiastical rules. The chief advisers of the Pope are the members of the College of Cardinals, who are appointed by him for life and elect his successor upon his death. From Vatican City the 12 committees forming the Curia Romana carry on the central administration of the Roman Catholic Church. Relations between the Church and the governments of the world are conducted by the Papal Secretary of State. The Holy See in 1945 maintained diplomatic relations with 44 governments and had unofficial relations with a number of others.

In the largest consistory in the history of the Sacred College, thirty-two prelates, four of them from the United States, were elevated to Cardinals on February 18. For the first time in six centuries, the Sacred College was marked by a non-majority of Italians, twenty-seven out of sixty-nine. Also, for the first time in history the occasion gave the United States five places in the College of Cardinals. With the ceremony's end, Cardinals numbered sixty-nine, one below the maximum established by Sixtus V in 1486.

Following is the list of prelates who were created Cardinals at the secret Papal consistory:

United States—Archbishops Francis J. Spellman of New York, John J. Glennon of St. Louis, Samuel A. Stritch of Chicago and Edward Mooney of Detroit  
Canada—Archbishop James Charles McGuigan of Toronto.  
Cuba—Manuel Arteaga y Betancourt, Archbishop of Havana  
Brazil—Carlos Carmelo de Vasconcellos Mottas, Archbishop of São Paulo, Jaime de Barros Camara, Archbishop of Rio de Janeiro  
Chile—José Caro Rodríguez, Archbishop of Santiago.  
Peru—Juan Gualberto Guevara, Archbishop of Lima.  
Argentina—Antonio Caggiano, Bishop of Rosario  
England—Bernard Griffin, Archbishop of Westminster  
Hungary—Joseph Mindszenty, Archbishop of Strigonia (Gran), and Primate of Hungary.  
Germany—Conrad von Preysing, Bishop of Berlin, Joseph Frings, Archbishop of Cologne, Clemens August von Galen, Bishop of Münster  
Australia—Norman Gilroy, Archbishop of Sydney.  
Netherlands—Johannes de Jong, Archbishop of Utrecht.  
China—Thomas Tien, Titular Bishop of Ruspe and Apostolic Vicar of Tsing Tao  
France—Emile Roques, Archbishop of Rennes; Pierre Petit de Julleville, Archbishop of Rouen; Jules-Géraud Saligé, Archbishop of Toulouse.  
Poland—Adam Stefan Sapieha, Archbishop of Cracow.  
Turkish Armenia—Gregory Peter XV Agagianian, Patriarch of Armenia.  
Portuguese East Africa—Teodosio Clemente de Gouveia, Archbishop of Lourenço Marques.  
Spain—Enrique Pla y Deniel, Archbishop of Toledo and Primate of Spain; Agostino Parrado y García, Archbishop of Granada; Emanuele Arce y Ochotorena, Archbishop of Tarragona.  
Italy—Giuseppe Bruno, Secretary of the Sacred Congregation of the Council, Clemente Micara Papal Nuncio to Belgium and Titular Archbishop of Apamea, Syria; Ernesto Ruffini, Archbishop of Palermo; Benedetto Aloisi Masella, Papal Nuncio to Brazil and Titular Archbishop of Mauritania.

In his address to the new Cardinals, Pope Pius XII sounded a challenge of the Roman Catholic Church to her enemies. Proclaiming the unity and completeness of the Church, the Pope declared that the "faithful, and more precisely the laity, are in the front line of the church's life." Throughout the Pontiff's highly militant speech, he emphasized the supra-nationality of the church that appealed to men everywhere to come to the Church instead of worshipping an all-powerful State and imperialistic tendencies. This political note was strong in many sections of his address which condemned expansionism and "big power" force and exhorted the people to rally to the church and defend it against Communism.

Earlier in the year, on January 19, the Pope expressed anxiety over the Ruthenian Church, most of whose members live within the Soviet borders. While world assemblies were proclaiming religious freedom, the Pope said, the regions of Galicia and sub-Carpathia were undergoing "grave vexations for their fidelity to the Apostolic See. There are even forces working with all their power to the end that they (Ruthenian Catholics) leave the bosom of the mother church and join the dissidents." This reference applied to Patriarch Alexius of Moscow, then recently elected by the dissident Russian Bishops, who the Pope said, sent a letter to the Ruthenian Church, asking for its desertion from the Catholic Church.

On March 17 the Moscow radio broadcasts reported that the Uniate Church of the Western Ukraine had decided to break its union with the Catholic Church of Rome and join the Russian Orthodox Church. Sounding a political as well as religious theme, the Synod of the Uniate Church, meeting in Lwow, sent a message to Premier Stalin declaring that the "abolition of the clerical sovereignty of the Vatican has become possible only now that all Ukrainians have been reunited in a single state. Henceforth nothing can separate our unified Ukrainian people."

In commenting on the split, a statement issued by the Vatican's Sacred Congregation of the Oriental Church said that Russian authorities had forced a false and invalid denunciation of the Uniate Church's accord with Rome. Charging a few renegade priests with sponsoring the withdrawal, the statement asserted that the move could not be recognized because "it must be recalled that the Bishops of these dioceses and their respective auxiliaries have been either deported or imprisoned while a large part of the clergy has been put into a position where they cannot exercise their ministry."

Pope Pius XII grew increasingly forthright in his addresses on preserving the strength of the Church as Europe began shaping its postwar political future. In an address to officials of the "Italian Catholic Action Youth" on April 20, the Pope urged his audience to fight more strongly than ever against anti-Christian forces in politics and in private life. On May 12 the Pope urged the women of Italy to vote only for those parties that were pledged to "respect the rights of God and of religion." In referring to the right to vote as sacred, the Pope told his audience of nearly 40,000 women to vote according to the dictates of conscience and God and be "Catholically active." On the eve of elections in Italy and France on June 1 the Pope once again touched on the ideological struggle between the Vatican and the left wing and appealed to voters to cast their ballots against "state absolutism" and the "wreckers of Christian civilization."

The United States received the first saint among

its citizens on July 7 when the Pope canonized Mother Frances Xavier Cabrini in the Basilica of St. Peter. Mother Cabrini, born in Italy, went to the United States in 1889 when she was thirty-nine years old and worked among the immigrants. She died in Chicago, Ill., on December 22, 1917.

After the arrest and sentence to prison of Archbishop Aloysius Stepinatz, Roman Catholic primate of Yugoslavia, in October by the Tito Government for alleged crimes as an "enemy of the State," the Vatican excommunicated all persons who contributed morally or physically to the judicial action against the Archbishop.

In the late months of the year 1946 an anti-clerical campaign, waged by several Italian newspapers and political organizations, was vigorously denounced by the Vatican newspaper, *L'Osservatore Romano*, and, in effect by the Pope in references to the "negators of God" and the "profaners of the divine church." The Italian courts issued a precedent-shattering decision on December 23 when it convicted Ruggero Maccari, editor of the anti-clerical weeklies, *Don Basilio* and *Pollo*, to two years in prison for having "offended the religion of the state," by slandering clergymen. The prosecution based its claims on the premise that no civilized people could countenance insults against religion and that criticism against the clergy on political grounds should be objective, not pornographic.

**VENEZUELA.** A South American republic. Area: 352,143 square miles. Population: 4,005,000 (1942). Capital: Caracas.

Venezuela has two highland regions, the Guiana highlands occupying nearly one-half of the country in the southeast; and the Venezuelan highlands extending northeastward from the Colombian border to the Caribbean. The Maracaibo lowlands form the extreme northwestern section of the country, and between the highland regions lie the extensive plains of the Orinoco. The northwestern lowlands have hot, humid climate, while the central coastal region is hot and dry. The hot climate of the Orinoco plains and somewhat cooler climate of the Guiana highlands are subject to extremes of wet and dry seasons.

**The People.** According to the census of 1941, about 3 percent of the population of Venezuela was Indian; classification by race, except Indian, is not included in Venezuelan census figures. Densities of population range from 10 persons per square mile in the State of Bolivar to 155.9 in the State of Nueva Esparata. Highest regional density is in the vicinity of Caracas. The largest cities are: Caracas, 269,000; Maracaibo, 110,000; and Valencia, 49,200.

Spanish is the official language. Roman Catholicism is the predominant religion.

In 1945 there was a total enrollment of 288,835 in 5,543 elementary schools; enrollment in 122 intermediate schools totaled 11,590; and there were 3,544 students in two universities. In 1944, seven new elementary schools were established to instruct more than 4,000 pupils, and 6 new high schools are under construction or soon to be built. The Normal School in Caracas, with a primary school for 1,000 students was completed in that year.

**National Economy.** Although agriculture is the basis of Venezuela's economy, the country depends heavily on oil exports. The principal export crops are coffee and cacao, but sugar, corn, rice, potatoes, tobacco, fruits and vegetables, cotton, and sisal are important. Cattle raising is also an important occupation.

Next to the United States, Venezuela is the Western Hemisphere's greatest supplier of oil, and is one of the world's largest exporters of petroleum. Petroleum and its derivatives represented over 93 percent of the total value of exports in 1938 and 95 percent in 1945. Total Venezuelan crude oil production in 1945 amounted to 323,361,253 barrels. Venezuela also produces gold and diamonds, about 30 percent of which are industrial diamonds. Other minerals include coal, silver, copper, magnesite, tin, asphalt, asbestos, mica and salt.

Manufacturing in Venezuela is largely confined to consumer goods. Cotton textiles, soap, cigars, cigarettes, candles, cheese, and vegetable oils are the chief articles made.

**Foreign Trade.** In 1945 total exports were valued at 1,019,682,000 bolivares, and total imports at 680,980,000 bolivares. Petroleum and its derivatives accounted for more than 95 percent of total exports. In 1945 the United States supplied 88 percent of imports.

**Government.** Venezuela's Constitution of 1936 provides for a federal union of 20 states and 2 territories. The Congress is bicameral, with a Senate of 40 members and a Chamber of Deputies of 98. Ninety day sessions of Congress are held annually beginning on Apr. 19. The President is elected by Congress; Senators by the state legislature; and deputies by municipal councils. (This provision was changed in 1945 by constitutional amendment providing for election of deputies by direct vote.) The state and municipal governing bodies are also elected by direct vote. Isaias Medina Angarita became President in 1941 for a 5-year term. In Oct. 1945 the Medina Government was overthrown by revolution, and Rómulo Betancourt became head of a provisional junta.

**Events, 1946.** The year opened with the revolutionary government of President Rómulo Betancourt, who led the uprising that deposed Isaias Medina Angarita in October, 1945, engaging in political accusations and arrests. President Betancourt, avowedly liberal and a firm opponent of a long line of military Presidents, arrested five Dominican citizens on espionage charges in early January. This move was followed by the arrest on January 14 of Noe Valera and Colonel Narciso Casique, who were accused of being leaders in a counter-revolutionary plot. The Government communique on the arrests announced that both had signed a confession admitting that they were agents for a "high official" in the Medina-López Contreras military clique. A few days later, the Supreme Court announced that its Chief Justice, Antonio Pulido Villafañe, was involved in machinations to take over the Government, pending the elections. No disturbances accompanied the arrests. At a Palace banquet, President Betancourt said that he had hoped to announce an election date, but that "the laborious nature of the task made future delay necessary."

After this brief flurry of trouble, the Betancourt regime endeavored to stabilize its administration and initiate reforms. Foreign investors were assured that the revolutionary Government intended to take no measures that would seriously affect foreign capital investments, particularly in oil production. Despite pressure to reopen the claims contesting the validity of concessions held by American and British oil companies, especially in the rich Maracaibo oil basin, Betancourt said he would respect the 1943 oil legislation passed by the Medina Government and enforce its provisions.

In February the Betancourt junta began instituting political reforms by allowing the Com-

munists to hold meetings. It assured Venezuelans that complete freedom of the press would be upheld and that peoples and parties could freely criticize the Government, but conspirators and those attempting to use force to overthrow the Government would be summarily repressed.

President Betancourt further assured his people that elections would be held by October. For the first time in the country's history women would be eligible to vote and the elections would be based on a secret ballot.

In early March this promise was clarified in a law that provided for the election of a Constitutional Assembly by universal secret ballot, as the first step leading to a presidential election by direct vote. The Constitutional Assembly, the junta announced, would write a new democratic Constitution. Under the old laws, Presidents were selected by Congress.

During February Betancourt began his agrarian reforms by parceling out to farmers the vast land holdings of late President Juan Vicente Gómez who died in 1935 after twenty-eight years of dictatorial rule.

After March 15 when the revolutionary junta restored constitutional liberties to Venezuelans, friction between Communists and other political groups grew more vigorous. During the Medina regime, the Communists were used as a foil to balance opposition from the army and business interests. Betancourt, however, was as vociferously anti-Communist as he was anti-military. On March 14 he declared that no Communists would hold office in his Cabinet.

Political rioting occurred during various Communist meetings. At Campo Elias, Yaracuy Province, townspeople and Communists clashed, and in the provinces of Aragua and Carabobo, the Communists and Acción Democrática (Government Party) met in a riot. Some injuries on both sides were sustained and numerous arrests were made. During this period a serious split occurred in Communist ranks over Party leadership. Two factions strove for control. Both applied to the Government for permission to use the official name of "Communist Party of Venezuela" and sent emissaries to other Latin American countries, particularly Cuba, to gain recognition abroad for their faction.

Oil, the largest source of Venezuela's revenue and a delicate subject of labor unions, nationalism, and government revenue, proved a knotty problem during May and June. On May 18 President Betancourt declared that no "strike atmosphere" surrounded the discussions between oil workers and companies. The companies refused to meet the demands of the new Federation of Venezuelan Oil Workers, led by President Luis Tovar (Acción Democrática) and Secretary Jesús Faria (Communist). An imminent strike was averted by Government arbitration that gave the workers a 50 percent increase in wages and persuaded the unions to give up the closed shop.

The government endorsed United States oil companies' participation in developing and marketing Venezuela's oil. President Betancourt declared that this cooperation would serve to appreciably increase government income and permit needed expenditures. This factor showed its importance in the 1946-47 budget which was 59 percent higher than the expiring one and included an extensive program of public works. The new budget of \$236,000,000 derived one third of its total from the petroleum cash reserve and current oil royalties added a further \$75,000,000. In comparison to this revenue, the remainder of the budget

would be made up from income taxes, reaching everyone earning more than \$225 a month—\$26,400,000; revenues from liquor, cigarette, and stamp taxes—\$32,100,000; and import taxes—\$37,500,000.

In early June, Educational Decree 321, promulgated by Minister of Education Dr. Humberto García Arocha, with the approval of the Government, modernized Venezuela's educational system, but at the same time, provided that students of the non-denominational public schools could be exempt from final examinations on the basis of a lower average grade than that required for exemption of students of the private schools, most of which are Catholic. The reason given by Dr. Arocha was that public school teachers had to meet more rigid requirements than private school teachers, thus the formers' standards were higher.

Publication of the decree provoked a storm of protest and cries of "anti-clerical" from the influential conservative Copei Party. The Acción Democrática and the Communist parties were equally vocal in defending the decree. Protest meetings and demonstrations were begun by private schools and followed by counter-demonstrations by public schools. Disorders grew to proportions that forced the Government to prohibit further demonstrations by either side. Despite this order, 7,000 private school students marched past the presidential palace on June 8. Two days later more than 40,000 members of the Workers' Federation staged a mass meeting supporting the controversial decree. Minister of Education Arocha and his chief assistants resigned on June 9 because the Cabinet refused him unanimous support. The resignation was accepted five days later and Dr. Antonio Anzola Carrillo was appointed to the post. In leaving Dr. Arocha accused the government of "casting aside under the pressure of certain interested sectors the entire doctrine behind the decree" and initiating a "policy of appeasement." The decree was withdrawn.

An alleged counter-revolutionary attempt to overthrow the revolutionary junta was prevented on July 20 by Government authorities who arrested thirty of the leaders. Most of those arrested were followers of former President General Eleazar López Contreras in exile in Colombia, the government reported. Included in the arrests were several Copei party leaders, but these arrests were termed "accidental." The coup was scheduled to follow President Betancourt's departure with a retinue of officials and army men for Mexico. The Government issued a communique reassuring the people of their constitutional liberties for the elections on October 6.

The seven-man revolutionary tribunal that tried more than 150 former Government officials for fraud and misuse of funds closed its nine month session at the end of July with the convictions of Gen. Felix Galavis and Dr. Pedro Manuel Arcaya, a prominent lawyer. The court reviewed the deeds of many of the more prominent officials of the Gómez and Contreras regimes. Most of the accused were convicted and ordered to restore specific amounts to the Treasury. López Contreras and Medina each were accused of the mismanagement of more than \$4,000,000.

Numerous political arrests were made in August on charges of counter-revolutionary activities and the publishing of counter-revolutionary leaflets. With the elections imminent and with its own power at stake, the provisional junta thought the better of the arrests and on August 1 declared a general amnesty for the prisoners.

Throughout the year provisional President Betancourt closely followed the hemispheric policy of the United States without incurring the ire of his Latin American neighbors. In a statement on February 4 he endorsed the peace plans of Spruille Braden, United States Assistant Secretary of State for Latin-American Affairs and advocated the use of a *cordon sanitaire* around any American government attempting to suppress human liberties. Since hemispheric unity was a reality in war, President Betancourt declared it was essential in peace, and "in this connection it is very heartening to see the clarity and frankness with which this has been expressed by Mr. Braden, who more than once has insisted that the democratic development of Latin America, and the development of the weak economies of these countries, is an indispensable condition for mutual friendship, without suspicions, between the United States and her neighbors to the South."

In May President Betancourt expressed full agreement in principle with President Harry Truman's proposal for cooperation between the armies of the American republics, providing that the nations involved were democratic. Full standardization of arms was desirable for the hemisphere, he stated, and a United States mission would soon arrive to modernize and train the Venezuelan army. Agreement for this military mission was signed on June 3 for a two year period with provisions for extending the term.

The problem of food a critical issue in the view of the government proved a constant rein on the progressive measures. According to Eduardo Mendoza Goiticoa, Minister of Agriculture, hunger and malnutrition faced the country unless the United States sold Venezuela adequate agricultural machinery and equipment to place the country on a self-sufficient basis. The Minister pointed out that Venezuela was suffering from an annual deficit of 105,000 tons of produce. President Betancourt sent a nonpartisan economic mission to the United States in June with 24,000,000 bolivares to purchase needed equipment.

In August fifty American business men, including several oil men, drafted a letter to the United States Embassy at Caracas stating that their interests were jeopardized by the growth of the Communists and that the government had accepted Communist collaboration. Leaders of the various political parties were unanimous in saying that the fears had no basis and President Betancourt announced that the provisional Government had signed no pact with the Communists.

As the October 27 elections approached President Betancourt's Acción Democrática party appeared to be the strongest. Although considered leftist, the party was opposed to the Communists, whose main election platform was based on oil reforms leading to future nationalization of the petroleum industries. Ranking behind the Acción Democrática was the Copei party, supported by powerful business interests and, unofficially, by the Catholic Church.

After the ballots of more than a million voters had been tabulated, the Acción Democrática emerged as the landslide victor with an unofficial count of 790,103 votes. The Copei party stood a poor second with 133,954 votes. The Communists received about 4 percent of the votes.

The results of the election apparently didn't satisfy all the political elements for on November 1 a counter-revolutionary attempt against the provisional Government was suppressed and nine leaders arrested in Caracas. Officials reported that

a large cache of arms and munitions was seized. The Government version said that the attempt was directed from the United States by former President Contreras.

On December 11 President Betancourt announced that a twelve hour revolt by a group of rebels in Maracay, center of Venezuela's Army and Air Force, had been put down by Government forces. The insurgents, it appeared, had hoped to capture President Betancourt and his Cabinet on their intended visit to the graduation ceremonies of the aviation school at Maracay. At the last moment, President Betancourt changed his mind. Sporadic fighting continued in the inland state of Trujillo where isolated groups of rebels held out until December 15. Civil rights were suspended by the Government.

The new Constituent Assembly formally opened on December 17 with the primary job of writing a constitution. Consisting of 137 members of the Acción Democrática, nineteen of the Copei, two of the Unión Republicana Democrática (conservative followers of former President Medina) and two of the Communist, the Congress appointed Dr. Andres Eloy Blanco, vice president of the Acción Democrática party, as the President of the Congress.

One of the first measures passed by Congress was an income tax reform bill, instituting a permanent progressive surtax on profits. The law imposed taxes on oil companies, most of which are owned by United States corporations, reaching 28 percent, according to the amount of profit.

JOSEPH P. BLANK.

**VETERANS ADMINISTRATION.** An independent Federal agency established by the Act of July 3, 1930 (46 Stat. L, 1016), to unify the work of various Federal bureaus administering direct benefits to veterans and their dependents and beneficiaries. On October 31, 1946, 17,860,000 veterans of all wars were eligible for benefits; of these, 13,909,000 served in World War II.

VA furnishes medical care for veterans with service-connected disabilities and, if a vacancy exists, for those with non-service connected illnesses unable to pay for treatment. On October 30, 1946, 83,311 veterans were receiving treatment in VA's 119 hospitals and homes, and 13,140 were patients in non-VA hospitals. Of the total of 96,451 veteran-patients, 31,844 were being treated for service-connected disorders.

To meet a load ultimately expected to reach a total of 250,000 patients by 1975, VA embarked upon the world's largest hospital construction program, which by 1950 will expand its present number of hospitals to about 200. Sites for new hospitals are being chosen near medical centers, whenever possible, so that VA might realize benefits of affiliation and close liaison with outstanding professional men in these centers.

Disabled veterans receive extensive guidance from VA in selecting courses and throughout their training. On October 31, 1946, 88,772 handicapped veterans were in schools and colleges under Public Law 16, and 70,791 were taking on-the-job training. Length of training depends on the time necessary to complete the course and become employable. Four years is the maximum, except in special cases.

Able-bodied veterans, in education or training, under the G.I. Bill receive a minimum of supervision from VA. On October 31, 1946, 1,214,241 veterans were enrolled in educational institutions, and 595,541 were taking on-the-job training. The

amount of education or training under the G.I. Bill depends upon length of service and ranges up to 48 months.

VA guarantees and insures loans for homes, farms, and businesses, up to a maximum of \$4,000 for real estate loans, and \$2,000 for non-real estate loans. By October 25, 1946, 482,553 veterans borrowed a total of \$2,497,307,592. VA guaranteed and insured \$1,155,913,251 of this amount. More than 90 percent of veterans—or 426,699—used their loans to buy or build homes; 39,897 went into business; and 15,957 purchased farms and farm equipment.

VA pays readjustment allowances to jobless veterans or to those self-employed who earn less than \$100 a month. The program is administered by the State Unemployment Compensation Commission under individual contracts with VA, which reimburses them both for the amounts they pay to veterans and administrative expenses incurred. During the week ended November 2, 1946, 976,865 continued claims for readjustment allowances for unemployment were filed. The peak was reached in April, 1946, when nearly 1,800,000 veterans were on the rolls. October payments totaled \$91,947,000, compared with \$160,071,000 for April, 1946.

During September, 1946, 249,949 self-employed veterans drew \$25,358,964 in readjustment allowances. About 85 percent were farmers.

VA conducts the largest mutual insurance system in the world. Within the past six years, it wrote more than 18,000,000 National Service Life Insurance policies with a total face value of nearly 150 billion dollars. As of October 31, 1946, about one-third of this number still was in force. In addition to this insurance underwriting for World War II veterans, VA has more than \$2,350,000,000 worth of United States Government Life Insurance in force on the lives of nearly 550,000 veterans of World War I. By the end of October, VA was making monthly payments to the beneficiaries of 372,807 veterans who lost their lives and who were protected at the time by National Service Life Insurance.

VA pays monthly pensions or compensation to more than 2,770,000 disabled veterans and their dependents. Payments range from \$10.35 to \$360 a month per case. At the end of October, 1946, there were 2,237,358 cases of disability compensation or pension, and 537,137 cases of death compensation or pension.

Disbursements for compensation and pension from July 1, 1945, to June 30, 1946, totaled \$1,260,000,000 (B). Of this sum, \$733,000,000 was for World War II service, \$346,000,000 for World War I service; \$24,000,000 for peacetime service; and \$157,000,000 for service in the Spanish-American and previous wars.

OMAR N. BRADLEY.

**VIRGIN ISLANDS, U.S.** An insular possession of the United States, situated about 70 miles east of San Juan, Puerto Rico. This possession, acquired in 1917 for \$25,000,000 through a treaty with Denmark, forms part of the chain of the Lesser Antilles which extends from Puerto Rico to the coast of South America. Of the 50 islands in the group only the three largest are inhabited—St. Thomas, St. John, and St. Croix. Total area, 132 square miles; population, 24,889 in 1940; 22,012 in 1930. Areas and populations (1940) of the individual islands: St. Thomas, 28 square miles, 11,265 inhabitants; St. John, 20 square miles, 722 inhabitants; St. Croix, 84 square miles, 12,902 inhabitants. Of the whole population, 69 per cent in 1940 were Ne-

groes, 22 per cent of mixed race, 9 per cent whites; 1942's birth rate 34.8, death rate 18.9, per 1,000. Capital, Charlotte Amalie (pop. 9,801 in 1940) on the island of St. Thomas. Illiteracy is practically confined to the population over 21 years of age (16 per cent in 1930). Most of the people speak English.

**Defenses.** The islands are the most eastern outpost of the United States and are situated so as to furnish protection both to United States holdings in the Caribbean Sea and the Panama Canal. The fine harbor of Charlotte Amalie provides shelter for as many as 23 warships at one time. Defenses constructed in this region during the past few years have been primarily to bulwark the great naval, military, and air bases in Puerto Rico. They include a permanent U.S. Marine Corps air base near Lindbergh Bay on St. Thomas, a large submarine base at Charlotte Amalie Harbor, and a U.S. Army air base on St. Croix near Frederiksted.

**Production and Trade.** St. Thomas has largely depended upon commerce, trade, and shipping, and its resources have grown by defense activities. On the other hand the municipality of St. Croix has depended chiefly upon agriculture for its revenues. During recent years there have been repeated droughts resulting in decreases in sugar production and cattle raising, with resulting unemployment. St. Croix and St. Thomas exported 266,690 proof gallons of rum and liqueurs in 1946.

**Finance.** For the fiscal year ended June 30, 1946, actual revenues of the municipality of St. Thomas and St. John were \$1,112,002 (\$1,257,416 in 1944-45) while total budget appropriations were \$1,083,851 (\$1,152,496 in 1944-45). Revenues of the municipality of St. Croix were \$262,257 in 1945-46 (\$515,383 in 1944-45) while total budget appropriations were \$421,658 (\$580,558).

**Government.** During the first 14 years of American control the Virgin Islands had a naval government. In 1931 jurisdiction was transferred from the Navy Department to the Department of the Interior and a civil governor was appointed by the President. Congress passed an Organic Act for the islands in 1936 which effected little change in the structure of the government although it did allow for a greater measure of political freedom. The autonomy of the two municipalities was retained and both have Municipal Councils, which when called in joint session, constitute the Legislative Assembly. The Governor is appointed by the President and holds office at his pleasure. Governor in 1946, William Henry Hastie (inaugurated May 17, 1946).

**Events, 1946.** The Virgin Islands received their first Negro Governor when President Truman appointed William Henry Hastie, former dean of Howard University Law School in Washington, D.C., to that post, replacing Charles Harwood.

**VITAL STATISTICS.** The outstanding vital statistics events of the postwar months in the United States may be traced in the movement of the marriage and birth rates, according to the United States Public Health Service. The time trend in these rates are given in tables 1 and 2, together with those for deaths, maternal and infant mortality, stillbirth, and divorce.

In June 1945, following the cessation of hostilities in Europe, the number of marriage licenses issued in the United States exceeded the number issued in the corresponding month of 1944. Ten months later, in April 1946, the increase in marriages resulted in an increase in births over those for April 1945. By September 1946, the provisional

birth rate for the United States had reached 27.9 per 1,000 population, a rate 34 percent higher than the corresponding rate for September 1945 and nearly 20 percent above the peak of the wartime rise in the birth rate that was reached in September 1942.

TABLE 1—CRUDE BIRTH AND DEATH RATES, MATERNAL AND INFANT MORTALITY RATES, AND STILLBIRTH RATIOS: REGISTRATION STATES,\* FOR SPECIFIED YEARS

In 1945, the number of marriage licenses issued in the United States increased 11 percent over the number for 1944, and in the first 6 months of 1946 the number issued was approximately 3 percent more than the total for the first 9 months of 1945. It is estimated that in 1946 the birth rate will be 17 percent higher than the rate for 1945 and 7 percent in excess of the maximum rate (21.5 per 1,000 population in 1943) for any of the war years.

The crude death rate for the United States remained at a comparatively low level during the war years. The rate of 10.1 per 1,000 population estimated for 1946 represents the lowest rate which has occurred in the entire time trend since 1900.

Approximately three quarters of the deaths that occur in the United States are charged to ten causes. In 1920, at the close of World War I, the

ten leading causes of death in order of importance were: (1) pneumonia and influenza; (2) diseases of the heart; (3) tuberculosis; (4) intracranial lesions of vascular origin; (5) nephritis; (6) cancer; (7) accidents excluding motor-vehicle accidents; (8) diarrhea and enteritis; (9) premature birth; and (10) diseases of pregnancy.

This list changed radically in the following years. With the reduction in mortality from the infectious diseases, diarrhea and enteritis disappeared from the list, tuberculosis, and pneumonia and influenza dropped to positions of lesser importance. Concurrently, and partly as a result of the aging of the population, the degenerative diseases of the older ages moved to the top of the list. In 1945, the 10 leading causes of death were: (1) diseases of the heart; (2) cancer; (3) intracranial lesions of vascular origin; (4) nephritis; (5) pneumonia and influenza; (6) accidents excluding motor-vehicle accidents; (7) tuberculosis; (8) diabetes; (9) premature birth; and (10) motor-vehicle accidents.

The responsibility for the national collection of vital statistics in the United States was placed under the U.S. Public Health Service in the Federal Security Agency on July 16, 1946 when, under Reorganization Plan No. 2, the Vital Statistics Division of the Bureau of the Census was transferred to this agency and there reconstituted as the National Office of Vital Statistics.

**VOCATIONAL REHABILITATION, Office of.** An agency of the U.S. Government which is the central instrument in the Federal-State system for restoration of disabled persons to the fullest physical, mental, social, vocational, and economic usefulness of their capabilities. Established July 6, 1943, as a constituent of the Federal Security Agency, the Office of Vocational Rehabilitation is charged with certification of Federal funds for States' use in rehabilitation work, establishing standards in the various areas of service, and furnishing technical assistance to the States.

The system is financed through grants-in-aid from the Federal Government to the States.

During the fiscal year 1946, 169,794 disabled persons received services from 51 State general rehabilitation agencies and 30 commissions for the blind. Of this number, 36,106 clients were prepared for and placed in gainful employment, principally as auditors, teachers, draftsman, laboratory technicians, retail managers, bookkeepers, secretaries, stenographers, clerks, office machine operators, waiters and waitresses, kitchen workers, bar-

TABLE 2—ESTIMATED MARRIAGES AND DIVORCES IN THE UNITED STATES: 1937 TO 1945  
(All figures for 1945 are provisional, marriage figures for 1937 to 1944 are revised Divorces include annulments. Although totals are presented to the last digit as summated, it should not be assumed that they are accurate to the last digit Minus sign (-) denotes decrease)

Average, 1937 to 1939	1,395,236	.	10.8	248,000	.	1.9

\* Estimated population present in continental United States as of July 1 of the given year, excludes armed forces overseas.

<sup>b</sup> Estimated total population as of July 1 of the given year; for the war years, 1940 to 1945, includes armed forces overseas.

bers and beauticians, hospital attendants, guards and watchmen, jewelers, shoemakers, machinists, welders, carpenters, airplane mechanics, auto mechanics, textile workers, bus and truck drivers, filling station attendants, construction workers, farmers and household workers.

Total annual earnings—excluding those of clients who became family workers, farmers, and others whose earnings were hard to estimate—increased 400 percent after rehabilitation, rising from an estimated rate of \$11,600,000 before rehabilitation to an estimated rate of \$56,300,000 afterwards. Of the group rehabilitated into employment, 27,022 or 75 percent were unemployed when they applied for services, 5,734 never having worked before and 6,993 only part-time.

MICHAEL J. SHORTLEY.

**VOLCANO ISLANDS.** A chain of islands in the western Pacific, about 710 miles south of Tokyo; also known as Kazan Retto. Iwo Jima, the principal island has an area of 8 square miles, and has a number of peaks—the highest being Suribachi (546 ft.) at the southern tip of the island. The other islands are Kita, and Minami. Total area: 10 square miles. Population (1940 estimate): 1,151. Under Japanese rule, Iwo Jima was a fortified air-base. On March 16, 1945, it was captured by armed forces of the United States after a 26-day battle.

**WAGE AND HOUR AND PUBLIC CONTRACTS DIVISIONS.** These Divisions of the U.S. Department of Labor administer the Fair Labor Standards Act of 1938 (with the exception of its child labor provisions) and the Walsh-Healey Public Contracts Act. The child labor provisions of the Fair Labor Standards Act are administered by the Child Labor and Youth Employment Branch of the Division of Labor Standards, U.S. Department of Labor.

The Fair Labor Standards Act, which is popularly known as the Wage and Hour Law, applies to employees engaged in interstate commerce or in the production of goods for interstate commerce, including occupations necessary to such production. All such employees, unless specifically exempted, must be paid not less than 40 cents an hour and not less than time and one-half their regular rate of pay for all hours worked in excess of 40 in a single workweek. Minimum wage rates of 40 cents an hour or less have been established by wage orders issued on the basis of the recommendations of industry committees, for all industries in Puerto Rico, and with a few minor exceptions, all industries in the Virgin Islands under a section of the Act which permits rates lower than those established in the U.S. to apply in the Islands. The Act also prohibits the shipment in interstate commerce of any goods produced in establishments in or about which oppressive child labor is employed. As of November 1946, the Act covered about 20,000,000 workers in the continental United States.

The Public Contracts Act, which applies to contracts made by the Government, or any agency thereof, for the manufacturing or furnishing of materials, supplies, articles or equipment in any amount exceeding \$10,000, provides for the payment of prevailing minimum wage rates as determined by the Secretary of Labor, and overtime pay at time and one-half the basic rate for all hours worked over 8 in a day or 40 in a week, whichever method of computation will yield the employee the greater compensation. This Act also sets restrictions on child and convict labor and provides for standards of safety and health.

During the fiscal year which ended June 30,

1946, 43,830 inspections were completed under both Acts and 42,060 establishments were found subject to their minimum wage or overtime provisions. Of the establishments inspected, 21,050 or 48 percent were in violation of the minimum wage or overtime provisions of the Acts. However, these figures should not be interpreted as representative of the extent of violations among all covered establishments, since establishments are selected for inspection on the basis of complaints and other information indicating that violations will probably be found.

Restitution of \$13,360,800 of illegally withheld wages was agreed to or ordered paid to 271,500 workers in 17,100 establishments during the fiscal year. Failure to pay the minimum wage was involved in more than one-fifth of these cases and restitution of such minimum wages affected about one-seventh of the workers found to be illegally underpaid in these establishments.

Since many establishments are covered under both Acts, it is impossible to give separate figures for restitution, which in many cases would be due under either Act. Of the 43,830 inspections completed during the year, 6,160 were made under the Public Contracts Act, all but 50 of which were concurrent with Wage-Hour inspection. Violations were found in 60 percent of the Public Contracts inspections, and 33 percent of such inspections disclosed violation of the minimum wage or overtime provisions.

Under the Fair Labor Standards Act, oppressive child labor means in general the employment of minors under the age of 16 in any occupation, or the employment of minors under the age of 18 in any occupation found and declared hazardous by the Secretary of Labor. The Secretary of Labor is empowered, however, to provide by regulation or order for the employment of minors between 14 and 16 years in non-manufacturing and non-mining occupations, under specified conditions. The child labor provisions of the Public Contracts Act provide that no boy under 16 or girl under 18 shall be employed on Government contracts in excess of \$10,000. A former wartime exemption permitting employment of girls between 16 and 18 years of age under certain conditions has been revoked, so that under no circumstances may girls under 18 be employed on contracts awarded after September 4, 1945.

Violations of the child labor provisions of either or both Acts were found in approximately 6 percent of the total number of establishments inspected during the fiscal year. Of these, 2,300 violated the Fair Labor Standards Act by employing 8,466 minors in oppressive child labor. As a result of employing 3,163 minors in violation of the Public Contracts Act, 430 firms were assessed liquidated damages amounting to \$563,470.

The Divisions are also charged with the inspection of safety and health conditions in those plants holding public contracts.

During the year, proceedings for injunctions against future violations of the wage and hour provisions of the Fair Labor Standards Act were instituted in 281 cases, while the criminal penalties which the statute provides for cases of wilful violation were invoked in 126 cases. In an additional 45 cases, the Department of Justice authorized criminal prosecutions which had not yet been commenced at the close of the year. There were 136 injunction cases contested during the year, as compared with 106 contested the previous year.

Continuing a function assumed during the war, the Divisions in the past year participated in the

wage stabilization program as agents of the War Labor Board and its successor agency, the Wage Stabilization Board. The Divisions' chief undertakings for the Board consist in serving as a first point of contact for employees and employers in maintaining compliance with the Board's stabilization policy and in making inspection of employers' records to determine conformity with wage stabilization policies. Almost 22,000 inspections for the Board were completed during the last fiscal year.

In September 1945, President Truman requested Congress to review and amend the Fair Labor Standards Act and to extend coverage to large groups of workers denied its protection. The Administrator of the Divisions has also urged the enactment of a number of amendments which would enable the Act to provide higher standards of well-being for a greater number of workers. Among such measures, the Administrator has recommended raising the minimum hourly wage to 65 cents and in addition has advocated that inequities among employers in the same field and even among workers in the same plant be eliminated by extending coverage to include activities "affecting commerce." He also has proposed that the complex system of exemptions now available to agricultural processing and handling industries be readjusted to achieve uniform overtime standards in those industries and to assure all covered workers in those industries minimum wage protection. He further recommended that the minimum wage provisions of the Act be extended to cover seamen; that the child labor provisions of the Act be extended by prohibiting the employment of oppressive child labor in interstate commerce or in the production of goods for interstate commerce; and that recent moves in several States for unreasonably short statutes of limitation be countered by adding a reasonable statute of limitations to the Act for the protection of both employers and employees. Bills including such objectives among their provisions were introduced in Congress last year.

I. L. METCALFE WALLING.

**WAKE ISLAND.** An atoll consisting of three islets—Wilkes, Peale and Wake—which are separated by narrow shallow channels and enclose a triangular lagoon  $4\frac{1}{2}$  miles long. Total area: 4 square miles. Its location makes it valuable as a cable station between Hawaii and the Philippine Islands and between Midway and Guam. Wake lies 2,130 miles west of Honolulu and 1,185 miles west of Midway. Previously uninhabited until May, 1935, Wake Island became an air depot on the transpacific route of Pan American Airways. Construction of a U.S. naval air base and submarine base was begun on April 19, 1939, and these installations were partially completed at the time of the Japanese attack on December 8 (December 7 in the U.S.). On Dec. 23, 1941, the island was surrendered to overwhelming Japanese armed forces.

**WAR DEPARTMENT.** The Department of the United States Government which is charged with the responsibility of organizing, training, and maintaining the Army, and with certain non-military activities; created in 1789, succeeding a similar department which was established prior to the adoption of the Constitution.

**Organization and Administrative Functions.** The Secretary of War (Hon. Robert P. Patterson, September, 1945) is appointed by the President, who under the Constitution is Commander-in-Chief of the Army. The Secretary of War is the top authority in the Army and in the War Department, respon-

sible only to the President. So far as the Army is concerned, the Secretary of War directly represents the President and is the instrument through whom command is exercised. Responsible for the execution of measures of the National Defense Act and for the protection of continental United States, the Secretary of War is charged with the maintenance and operation of all Army bases, harbor, and sea-coast fortifications, the security of the Panama Canal, the improvement and development of Army equipment, and the management of Army affairs.

The Under Secretary of War, who acts as Secretary of War during the incumbent's absence, establishes policies for the War Department's procurement of materials, exercises general supervision over industrial matters affecting the War Department—including industrial mobilization and demobilization—and coordinates these functions with other government agencies dealing with the use of manpower and the allocation of materials and of industrial facilities.

There are also an Assistant Secretary of War, charged with general administrative duties relating to the Army and the War Department, and an Assistant Secretary of War for Air, charged with the supervision of matters pertaining to the Army Air Forces.

Highest military authority, responsible only to the Secretary of War and to the President, and their principal adviser on the activities of the military establishment and the conduct of war, is the Chief of Staff (Gen. Dwight D. Eisenhower, November, 1945). In command of all components of the Army of the United States, the Chief of Staff is responsible for their use in war and for plans and preparations insuring their readiness for war and their effectiveness in support of the foreign policy of the United States. The Chief of Staff is head of the War Department General Staff.

**General Staff.** The General Staff is a closely coordinated group of officers constituting the principal advisers to the Chief of Staff. Under the post-war reorganization of the War Department and of the Army (effective June, 1946), the General Staff was set up in six divisions, each under a director, and the former designations of G-1, G-2, G-3, G-4 and Operations—together with the titles of Assistant Chiefs of Staff for the respective "G" divisions—were abolished. These divisions are:

- (1) Personnel and Administration Division,
- (2) Intelligence Division,
- (3) Organization and Training Division,
- (4) Service, Supply, and Procurement Division;
- (5) Plans and Operations Division; and
- (6) Research and Development Division.

**WAR MOBILIZATION AND RECONVERSION, Office of (OWMR).** The OWMR was established by Act of Congress (Public Law 458, 78th Congress, Second Session) October 3, 1944. Director of the Office is: John R. Steelman, (Alabama). Deputy Director for Production, Stabilization and War Liquidation: Harold Stein (Washington, D.C.). Deputy Director for Fiscal Policy, Employment, and Social Security: J. Donald Kingsley (Ohio). Anthony Hyde (New York), Deputy Director for Information and Reports. Aaron Lewittes (New York), General Counsel for OWMR and OES. Dr. George W. Taylor (Pennsylvania), Chairman, OWMR Advisory Board. Address: East Wing, White House, Washington 25, D.C.

The law creating OWMR gave the agency responsibility to coordinate the mobilization of the United States for war and to plan for and guide its reconversion to peace. Congress gave the Director of Reconversion authority to:

- (a) plan to meet the problems arising out of the transition from war to peace;
- (b) issue orders and regulations to federal executive agencies to carry out reconversion plans;
- (c) promote and assist in developing plans for demobilization and reconversion by executive agencies;
- (d) settle controversies among them;
- (e) recommend appropriate legislation to the Congress;
- (f) determine the need to consolidate, simplify or eliminate emergency war agencies;
- (g) determine the need to relax or remove emergency war controls;
- (h) consult and cooperate with State and local government, industry, labor, agriculture and other national and local groups regarding reconversion problems;
- (i) submit reports to the President, the Senate and the House of Representatives on the first days of January, April, July and October, on the activities undertaken or contemplated by him, summarizing and appraising activities of the executive agencies, and making proposals for passage of legislation.

The Act created an Advisory Board, to represent the public and the public interest, to include representatives of the public and others experienced in business management, agriculture and in labor matters. In 1946 members of the Board were:

Public Dr Taylor, Pennsylvania, Chairman; Mrs. Anna M. Rosenberg, New York

Industry Eric A. Johnston, Washington; George H. Mend. O., Nathaniel Dyke, Jr., Arkansas

Labor William L. Green, Ohio, AFL, Philip Murray, Pennsylvania, CIO, T. C. Cashen, New York, Railway Labor Executive Association.

Agriculture Edward A. O'Neal, Alabama, Farm Bureau Federation; James G. Patton, Colorado, National Farmers Union, Albert F. Goss, Washington, D. C., National Grange.

Mr. Steelman, special assistant to the President of the United States, was appointed Director of War Mobilization and Reconversion on June 25, 1946. Previous directors were: Secretary of the Treasury John W. Snyder, July, 1945 to June, 1946; Chief Justice of the United States Fred M. Vinson, April, 1945 to July, 1945; and Secretary of State James F. Byrnes, October, 1944 to April, 1945.

The functions and personnel of the Office of Economic Stabilization, established in the Office for Emergency Management by executive order on October 3, 1942, were transferred, also by executive order, to the OWMR July 25, 1946. On that date, Mr. Steelman was appointed Director of Economic Stabilization, in addition to his other duties.

The purpose of OES is: to control as far as possible inflationary developments which would hamper prosecution of the war or the operations of the domestic economy; and to formulate and develop national policy for the control of civilian purchasing power, prices, wages, rents, salaries, profits, rationing, subsidies, and related matters to avoid insofar as possible increases in the American cost of living.

Exercising its functions under the general supervision of the OWMR are:

(1) *The Office of Contract Settlement*, see separate article, CONTRACT SETTLEMENT, OFFICE OF.

(2) *The Appeal Board of OCS*—E. J. Dimock (New York), Chairman. Address: Federal Reserve Building, Washington 25, D.C. This office hears appeals brought in accordance with the Contract Settlement Act of 1944.

The OWMR directed a nine-point federal inter-agency action program to aid American colleges and universities to house and educate 800,000 student veterans in the fall of 1946. Initiation of this program resulted in the appointment by the President of the National Commissioner of Higher Education to work out long range policies for higher education in the United States. The Director of Reconversion issued regulations October 5, 1946, by which non-profit educational institutions could ob-

tain top priority to buy surplus classroom, laboratory and workshop equipment.

To reduce inflationary pressures in the reconvert economy the Director of Reconversion called for a \$700 million cutback in federal expenditure for construction during the 1947 fiscal year. Federal agencies were directed to let no new contracts for a 56-day period. OWMR directed that construction contracts be let after October 1, 1946, only after projects had been subjected to a dual screening to establish their essentiality and non-deferrability.

During the year OWMR took many other actions to establish policies and develop programs for production, stabilization, fiscal policy, employment, and war liquidation.

On December 12, 1946, by executive order, OWMR together with the Office of Price Administration and the Civilian Production Administration was transferred into the Office of Temporary Controls. Major General Philip B. Fleming was named Temporary Controls Administrator. Harold Stein was appointed Commissioner for OWMR. At the same time, the OWMR Motion Picture Division and the OWMR Media Programming Division were transferred by executive order to the reconstituted Office of Government Reports. Directive powers which had been delegated to OWMR were retained by the President, who named John R. Steelman as his Special Assistant.

HAROLD STEIN.

**WARM SPRINGS FOUNDATION.** Located in Meriwether County, Georgia, the Foundation was started in 1927 by Franklin D. Roosevelt as a non-profit organization for the after-treatment of infantile paralysis.

It is financed primarily by grants from The National Foundation for Infantile Paralysis which conducts the annual March of Dimes. Basil O'Connor is president of the National Foundation and chairman of the executive committee of the Warm Springs Foundation. The center treats from 500 to 600 polio victims each year, always after the disease has passed the acute state. Dr. C. E. Irwin is chief surgeon.

The institution is on Pine Mountain, with grounds covering 500 acres at an altitude of 1,000 to 1,200 feet. Treatment pools are supplied by pure spring water.

No profit is derived from patients. About two-thirds pay none or only part of the cost of treatment. Others pay actual costs. No one is refused admission for lack of funds.

**WAR RELIEF CONTROL BOARD, President's.** During the war years 1939-1946, war relief abroad and in the United States was the enterprise of a wide variety of private organizations. The function of the President's War Relief Control Board, which was established by Executive Order July 25, 1942, was to coordinate these many efforts to meet war-created welfare and relief needs. This Order transferred from the State Department to the Board the administration of provisions of Section 8 of the Neutrality Act of 1939 relating to the solicitation and collection of funds and contributions for foreign relief. The Board was authorized to control not only American relief in belligerent countries, but also all the other war-relief activities, both domestic and foreign, except those of the American Red Cross, established religious bodies, or those confined to local areas.

The Board's review of the programs of organizations applying for war-relief licenses and its con-

tinuous examination of the certified reports and public audits of receipts and expenditures, required from agencies operating under its jurisdiction, were conducted with special attention to efficiency of administration. This surveillance resulted in reducing substantially the overhead costs of relief agencies, thereby saving for charitable purposes approximately 20 million dollars.

Consolidation of scattered local relief committees into effective national agencies and the merging of existing national organizations also received the primary attention of the Board. This effort resulted in a decrease of from 213 active agencies at the end of 1939 to 90 at the end of 1945.

In January 1943 the Board proposed a plan for establishing a National War Fund to collaborate with community chests in a united appeal for local charities and national war philanthropies. Proceeds of the Fund's campaigns financed many major foreign and domestic war-relief agencies until the close of 1946.

Another activity of the Board was the formation of the Council of Relief Agencies Licensed to Operate in Germany (CRALOG), a joint relief operation primarily of church relief agencies interested in aiding German civilians. At present 15 agencies jointly plan, ship, and distribute relief for Germany under the supervision of the various Allied military authorities. The success of this joint operation has led to the formation of a similar organization—Licensed Agencies for Relief in Asia (LARA) which has been authorized to handle relief supplies for Korea and Japan.

During the six-and-a-half year period from September 1939 through March 31, 1946, 596 agencies were registered for voluntary foreign war relief. These agencies collected in that time \$597,621,366 for the relief of the war-stricken countries of the world. This figure added to what was collected for the welfare of the Armed Forces totaled over a billion dollars from voluntary sources.

CHARLES P. TAFT.

**WATER SUPPLY AND PURIFICATION.** The cost of water-supply improvements needed in 1946 in all U.S. communities of more than 200 population has been estimated by the U.S. Public Health Service at \$2,190,000,000, as against \$803,300,000 in 1944. But works in the planning or promotion stages represent \$1,775,308,000 in the 1946 estimates. The same Service also issued in 1946 new standards for drinking water, superseding those of 1942, and accepted by the American Water Works Association as standards for all public water supplies. New factors in supply and consumption problems are the air-conditioning of buildings (including disposal of the cooling water) and the increasing use of water for heating rooms through circulating pipes embedded in the walls or floors. Still another factor in water consumption is the steadily increasing construction of municipal and private swimming pools. Much attention is being given to their safe and sanitary construction and operation, and the Illinois State Board of Health has issued a lengthy report on this subject. Decreasing supplies and increasing demands necessitate search for new and more distant sources of supply. Other troubles are the growth of algae and weeds in reservoirs, and the growth of the water hyacinth and other vegetation in streams of the Southern states, requiring chemical and mechanical means for removal.

At the end of the war, the United States Army had nearly 1,000 water-supply systems serving troops in this country and a larger number abroad. They ranged in capacity from 500 to 5,000,000

gallons daily, and in design from improvised tanks for chlorination to rapid-sand filters of modern types. With its safe water supplies the Army had little trouble from water-borne diseases in tropical areas.

Municipal water-softening plants number about 710, of which 35 percent use the zeolite process. Los Angeles makes its own zeolite. Electrical softening processes are also being developed. Household softening plants number 130,000 in 750 communities. Chlorination is used mainly for bacteriological quality, but also to supplement other processes and to improve odor and taste. At Baltimore, it has been effective in the removal of excessive manganese and eliminating objectionable taste.

The U.S. Bureau of Reclamation has the largest construction program of its 43-year life, but like other Federal agencies it has been required to curtail activities not essential for the housing problem. In the comprehensive study of developments in the Missouri River basin, as approved by Congress, irrigation will be the field for the Bureau of Reclamation, while work for navigation and flood control will be under the Corps of Engineers, U.S. Army. In California, the State water-resources bill opposes Federal regional control of river basins, and favors return of the great Central Valley project to the State.

To meet the increasing water-service requirements of new housing, expanding population, new industries, and long-deferred repairs or maintenance, many cities and water companies are planning extensions and improvements. Thus, the Metropolitan Water District of Southern California plans to double the capacity of its water-softening plant San Diego and a group of nine surrounding communities desire annexation by the above District, from which their new supply of Colorado River water will be drawn through a 72-mile aqueduct. The hardness of this water will require sedimentation followed by softening and filtration. A Federal commission has been appointed to plan the financing of this aqueduct, which has been built by the Navy for its San Diego establishment, and which the city is under contract to purchase or lease. In Arizona, the supply of Phoenix from the Verde River is failing and a battery of wells, with a pipe-line to a reservoir, is recommended. Eventually there will be a supply from the Colorado River, but the aqueduct, including a 77-mile tunnel, has yet to be built.

An intake in Lake Erie, four miles from shore, is to bring a better water supply to Cleveland, Ohio. The new filtration plant at Chicago, to be the largest in the world, is still relying on sedimentation and chlorination, as lack of material prevents completion of the filters. St. Louis has a 5-year program of \$20,000,000 for expansion of its supply and treatment system. After several years of study, Philadelphia has a project calling for the expenditure of \$62,000,000 for rehabilitation of its works, and \$284,000,000 for a new supply from the upper Delaware River. A company planning a water-supply and power project on the upper Delaware has proposed to serve Philadelphia and a group of New Jersey communities. For Washington, D.C., a comprehensive program spreads its \$41,000,000 cost over a term of 50 years. Meanwhile, the flow of water in the nine-foot four-mile tunnel has been increased by installing screw pumps in the twelve-foot outlet shaft. At Baltimore, a salty contamination of the water is attributed to leakage of ground water into artesian wells not effectively sealed. Unless this can be checked, a new source of supply may be necessary. Water shortage at Santa Fe,

N.M., necessitated rationing, as the reservoir was almost dry, and a tank-car emergency supply was being considered when rains began.

In view of long droughts and increasing demands for water in the London area of England, the Metropolitan Water Board in July, urged the Ministry of Health to grant priorities of men and materials for carrying out the works of a 10-year program. But the Board's request to annex some thirty water companies and thirty-three local water boards within the area was rejected. Chlorination of water for the Greater Vancouver Water District, Canada, was discontinued in 1946, on the ground that the water is of good quality and that the government order of 1942 was based on an insufficient study of local conditions. In Central America and South America a number of water-supply and treatment plants are under construction with engineering and financial aid from the United States. See **AQUEDUCTS, DAMS, SANITATION.**

E. E. RUSSELL TRATMAN.

**WATERWAYS, Inland.** There has been but little important development in waterways or inland navigation, most of the recent work being in the way of maintenance or routine improvement, mainly under the direction of the Corps of Engineers, U.S. Army, which has authority over all navigable waters. Canals are relatively few, but a great arterial system of river navigation is formed by the Mississippi (St. Paul to the Gulf), the Ohio (now canalized), and the Illinois. This last stream connects the Great Lakes with the Mississippi and the Gulf. During the war, several vessels built on the Great Lakes were floated to salt water by this route. Since the war, ocean-going cargo steamers 260 ft long, built at Decatur, Alabama, have been sent to the Gulf by way of the Tennessee, the Ohio, and the Mississippi rivers. Congress has authorized the expenditure of \$60,000,000 for beginning the construction of a 9-foot navigation channel through the Alabama and Coosa rivers from Mobile to Montgomery, and to Rome, Georgia.

A notable feature of the inland navigation system is the series of intracoastal waterways formed by dredging and connecting the series of lagoons and channels paralleling the coast line. The depth of water is usually 9 or 12 ft, sufficient for large barges which can thus navigate in smooth water. At present, the Atlantic waterway extends from New York harbor to the east side of Florida, and the Gulf waterway extends from the west side of Florida to Corpus Christi, Texas, and eventually to the Rio Grande. Surveys are being made for a barge canal across Florida to connect these two main waterways. A branch is proposed from the Gulf waterway at Morgan City, La., 50 miles north to the Mississippi at Baton Rouge. A similar waterway is projected through Puget Sound and on to Alaska.

Its cost was estimated at that time as \$409,340,000, but in February, 1946, the U.S. Engineers estimated it at \$455,056,000. Since then the trend of cost of public works has been rapidly ascending, and has been estimated to be from 35 to 50 percent above original estimates. Another objection is that the proposed draft of 27 feet is too shallow for modern ocean-going vessels.

In Canada, no major improvements to the government canals are planned, but a private concern has been permitted to put in operation on the Welland ship canal a dry-dock capable of handling the largest ships on the Great Lakes. On Lake Temagami, in Ontario, a shallow-draft, self-propelling, landing-craft barge is in ferry service.

The war-wrecked and blockaded canals and rivers of France, Belgium, and the Netherlands were almost completely reopened to navigation by July, 1946, as reported by the Central Inland Transportation commission. The work included removal of mines, wrecked bridges, and sunken ships, and the dredging of sand bars formed at the various obstructions. An American dredge was used for this work on the Rhone. In some cases the channels have been enlarged to carry barges of 1,000- or 1,500-ton capacity, in place of the original 300-ton barges.

E. E. RUSSELL TRATMAN.

**WEATHER BUREAU.** The year 1946 marked the resumption and expansion of peacetime Weather Bureau public services, which were provided in larger amount and more intensive form than before. The number of full-time Weather Bureau stations decreased slightly, and much weather observing and reporting work by military agencies was discontinued. A heavier workload was accordingly placed on the remaining 413 full-time Weather Bureau stations. Counterbalancing this to some extent, the demobilization of veterans well-trained in meteorology provided the Bureau with new personnel of a professional caliber not heretofore available on such a large scale. A more detailed account of the Bureau's 1946 weather services, and discussions of some noteworthy advances in instruments, research, climatological and hydrologic activities, are given below.

**Weather Services.** Without increase in total employee-time for meeting the needs of the general public, the Weather Bureau handled a 28 percent increase over 1944-1945 in direct requests for weather advice. A greater number of people availed themselves of the automatic telephone weather-forecasting service. In addition to newspaper outlets, more than 600 commercial stations broadcast weather news; approximately 100 of them maintained their own microphones in Weather Bureau offices for direct use by the Bureau's meteorologists in disseminating weather information.

The growth of trans-Atlantic aviation was reflected in the steps taken to establish weather stations in the Arctic, north of latitudes from which reports had been previously received. This project will permit more accurate forecasting of flight conditions over the North Atlantic. Special trans-oceanic aviation-forecasting units were maintained at New York, Baltimore, Washington, and Miami. At 15 district forecasting centers in the United States, the basic weather forecasts for airway routes and terminals were prepared. In addition, 26 Flight Advisory Weather Service units provided a specialized type of airway weather information.

During the hurricane season, the several hurricane forecast centers on the Gulf and Atlantic coasts were charged with the primary responsibility for issuing warnings as necessary. These warnings were disseminated by a large network of Weather Bureau stations. More than \$80,000,000 property damage was caused by three severe hurricanes which struck the coastline of the United States. Only seven lives, however, were lost—the lowest mortality rate in the history of the hurricane-warning service. The fruit-frost, fire-weather, shippers' forecasts, farm operational advices, etc. continued their various specialized services to agricultural, commercial, and business interests.

**Instruments and Research.** Wartime developments, centering around the application of radar and other electronic equipment to weather observations, were extended on an enlarged scale to the national

weather service. These developments include the Weather Bureau's ceilometer, an instrument which permits more accurate measurement of ceiling height, day or night; and apparatus for the better determination of the speed and direction of the upper winds, which together with the utilization of radar to detect showers, thunderstorms, squall lines, etc., as an aid in local short-term forecasting, was pioneered by the Army and Navy.

At a test area near Orlando, Florida, the Weather Bureau cooperated in a research project on thunderstorms, in which a tightly-knit ground network and a well-instrumented aircraft observation system were combined to explore the meteorological conditions associated with one of aviation's greatest hazards. Research was also conducted on forecast techniques looking to objective methods for the betterment of short range forecasts of several weather elements. In the field of extended forecasting, the Weather Bureau's 5-day forecasting section and the Massachusetts Institute of Technology conducted joint studies of atmospheric circulation patterns in relation to the weather to be expected 5 days to a month ahead. The Weather Bureau also cooperated in investigations into other atmospheric problems carried on at several universities.

**Climatology and Hydrology.** A program, begun during 1946 in several southern states, will eventually be extended to Weather Bureau stations throughout the country. This program is the machine tabulation of weather observations, which not only is more economical of time than the manual methods previously used, but also allows a more complete analysis of the data. This program points the way to future integration of heretofore unconsidered climatic factors with standard planning in a host of public activities.

The Bureau's hydrologic services, consolidated as of July 1, 1946 with the Climatological division, were devoted to the development of seasonal forecasts of the water supply for several river basins, the determination of flood forecasting techniques for a number of streams, and the preparation of some 73 storm studies. The flood-warning service saved at least \$4,000,000.00 in damage, and co-operative projects on reclamation and flood control were also conducted in association with other Government agencies.

F. W. REICHELDERFER.

**WHITE HOUSE OFFICE.** A division of the Executive Office of the President, which serves the President in the performance of detailed activities incident to his office. The officials include three Secretaries, Matthew J. Connelly, Charles G. Ross, William D. Hassett; two Administrative Assistants (personal aides), David K. Niles and Raymond R. Zimmerman; Special Counsel, Clark M. Clifford. Special Assistants, John R. Steelman and Edwin A. Locke, Jr.; Special Executive Assistant, George J. Schoeneman; Social Secretary, Reathel M. Odum; Executive Clerk, William J. Hopkins.

**WOMEN'S BUREAU.** A bureau in the U.S. Department of Labor created by Congress in 1920 to "formulate standards and policies which shall promote the welfare of wage-earning women, improve their working conditions, increase their efficiency, and advance their opportunities for profitable employment."

The main business during 1946 was to assist women workers, and all who are concerned with their problems, in readjustment from a wartime to a peacetime economy. The Bureau was especially

concerned that discriminatory practices not be used to bar women from employment or to force them into substandard jobs.

**Research.** In 1944 and 1945 the Bureau had conducted interviews with over 13,000 women war workers to study their status then and to determine their postwar plans. A bulletin summarizing the findings was published this year, as "Women Workers in Ten War Production Areas and Their Post-war Employment Plans."

In 1946 the Bureau began a follow-up investigation in Baltimore to locate the women formerly employed in war industries and interviewed in that city, and to obtain information on their work histories since then. The Baltimore sample will include a cross-section of women by race, marital status, age, and work experience. The facts gathered are expected to indicate the employment and economic problems of displaced war workers and the adjustments required of them.

Another study of women workers after V-J Day was begun in Bridgeport, Conn. The survey was undertaken, at the request of the Community Advisory Service Center and YWCA of Bridgeport, to investigate the employment needs of local women workers and to help formulate a community program to meet these needs.

**Labor Legislation.** The Bureau's work in connection with labor legislation was continued throughout the year. A bulletin explaining and analyzing State labor laws for women was published. This was the fifth and final bulletin in a series entitled, "State Labor Laws for Women with Wartime Modifications." The preceding four had been summaries in legal-chart form of the laws of each State. Supplements were issued to the Bureau's 1942 bulletin containing digests of all State minimum-wage laws and orders, bringing this material up to date through October 15, 1946. A cumulative supplement to the report, "Legal Status of Women in the United States," was completed, covering significant legislation pertinent to the political and civil status of women enacted 1938-1945.

In March, the Bureau's 12th Annual Minimum Wage Conference was held. The first such minimum-wage conference since the first year of the war, it was called at the urgent request of State minimum-wage administrators. Representatives from 9 States with existing minimum-wage laws, the District of Columbia, and Puerto Rico met to discuss standards and methods for strengthening and improving minimum-wage administration and enforcement, as well as to report on current progress and to exchange experiences in dealing with special problems.

**International Cooperation.** The Bureau's program of cooperation with other countries, carried on under auspices of the U.S. State Department, included extensive work with other American republics. Training programs for five women labor officials from South American countries, and also for women from China, Lebanon, and Puerto Rico, were completed during the year. Early in 1946 the chief of the International Division visited Mexico at the invitation of the Mexican Department of Labor. While there she delivered a series of lectures and visited factories and institutions. When the Inter-American Commission of Women met in Washington, D.C., in December 1946, the Bureau's International Division chief represented the United States.

In January and February, the Bureau's Director served as an adviser to the U.S. delegation to the first General Assembly of the United Nations in London. She served in an official capacity on a

committee to revise the Constitution of the International Labor Organization, and at the 98th and 99th sessions of the Governing Body of the ILO, the 29th session of the International Labor Conference, and a meeting of the ILO Committee on Women's Work.

FRIEDA S. MILLER.

**YACHTING.** Many skippers broke out sails in 1946 for the first time since prewar days and the colorful sport of yachting enjoyed a real boom. Perhaps the highlight on a log that fairly bulged with competitive events was the Newport to Bermuda thrash of 635 miles, won by the 57-foot sloop *Gesture* owned by A. H. Fuller of New London, Conn. Lone sad note of the classic, last held in 1938 and always filled with adventure, was the sinking of the *Zena*, Bermuda's only entry in a field of 45 sea-going craft. The *Zena* went under—although all hands were saved—when she was rammed while enroute to Newport's starting line.

Another international test was the world Star Class championship at Havana. Competing in a fleet that included entries from the United States, Havana, South America, Europe, and Hawaii, George Fleitz, with Walter Krug as crew, sailed the *Wench II* of Los Angeles to victory in the seven-race regatta.

Larchmont challengers for the Amorita Cup, held by the Royal Bermuda Yacht Club, visited Hamilton for a best-of-seven series, but returned home without the prize when the Bermuda sailors won by 4 to 2. *Away*, 45-foot sloop owned by H. N. Davock of Birmingham, Michigan, took Class A honors in the thirteenth St. Petersburg-Havana race. However, on corrected time, the *Den-E-Von*, 40-foot cutter skippered by W. A. Denny of St. Petersburg, took fleet honors and the Class B award.

All the big regattas, overnight races, and cruises of yesteryear were revived, with the result that racing waterways were dotted with picturesque craft from early spring until late fall. On Long Island sound alone, twenty-four championships were run by member clubs and drew 2,503 craft—839 more than the previous year. Sound champions for the year follow. International—*Feather*, J. L. Merrill; Class S—*Kandahar*, P. S. Patton; Atlantic—*Whim*, Miss Aileen Shields; Star—*Bolt*, Romeyn Everdell; Victory—*Stormy*, George W. May; Lightning—*Rogue*, Jack Webb; Comet—*Hal*, E. and E. Halahan; One-Ten—*Hurricane*, H. G. Herbert; Snipe—*Skipper*, Miss Donna Sandkam; Handicap, Division IV—*Tidfordriv*, Richard Sheehan; Handicap, Division VI—*Toughie*, Theodore Koepper; Handicap, Division VII—*Patricia*, G. J. Binstock.

Larchmont Race Week proved the big event of the year, with 295 craft checking over the line for a total of 1,674 starts, not including the 166 that competed on junior day.

International Snipe honors were won by Bob Davis of Balboa, California, and national Lightning laurels went to Walt Swindeman of Toledo. Bill MacLay of Chatham annexed the United States junior title and Bill Weatherly of the Pasquotank River Y.C. was first in the boys' national regatta. The Edgartown Yacht Club captured the United States women's championship and the Mrs. Charles Francis Adams trophy. Mrs. Virginia Weston Besse was skipper of the winning crew. Massachusetts Institute of Technology carried off the McMillan Cup, symbolic of national intercollegiate supremacy.

THOMAS V. HANEY.

**YAP.** An island cluster in the western Caroline group of the Japanese Pacific Islands (q.v.); surrendered

by Japan to Allied armed forces in 1945. It comprises three main islands within a lagoon formed by an outer band of islets. Area, 83 square miles. Population (1938), 6,939 (5,811 natives, 1,119 Japanese, and 9 others). On November 6, 1946, the United States requested that the island be placed under United Nations trusteeship with the United States as administering authority.

**YUGOSLAVIA.** A Balkan republic (proclaimed Nov. 29, 1945, and recognized by Great Britain and the United States on Dec. 22, 1945), formerly a kingdom. Area: 95,753 square miles. Population (Jan. 1, 1941, estimate): 15,920,000 (13,934,000 at the 1931 census). Chief cities (with 1931 census figures): Belgrade (capital) 266,849, Zagreb 185,581, Subotica 100,058, Ljubljana 79,056, Sarajevo 78,173, Skopje 64,737, Novi Sad 63,985.

**Government.** The Constitution of Sept. 3, 1931, proclaimed Yugoslavia a hereditary, constitutional monarchy. It vested executive power in the King, acting through a Ministry appointed by him and not responsible to Parliament. Legislative power was shared by the King and Parliament. There was a Senate of 84 members, half elected and half appointed by the Crown for terms of six years. The Lower Chamber (Skupstina) of 371 elective members was dissolved Aug. 26, 1939, and new elections were held in November 1945. The Constituent Assembly meeting in Belgrade on Nov. 29, 1945, proclaimed Yugoslavia a republic. Premier: Marshal Josip Broz (Tito).

**Events.** In the course of the year Yugoslavia regularized its regime by the adoption of a new constitution, and consolidated its strength internally by further social measures and steps against opposition groups and the Catholic Church. Internationally it followed and was supported by Soviet policy, so that it became in effect the Soviets' westernmost outpost against the western Allies in southern Europe. The principal international issue was the disposition of Venezia Giulia and the city of Trieste. Friction was exacerbated by Yugoslav attacks on American aircraft and by Greek charges that the "communist" bands which operated in northern Greece after the restoration of the Greek King in September were receiving Yugoslav support.

The new Yugoslav constitution received formal approval at a plenary session of the Constituent Assembly on January 31, 1946. Legal sanction was given to existing administrative, social and economic structures. In its fundamental principles, in definitions of national sovereignty and of legislative, judicial, and executive authority, and in its provisions for the administrative organization of the country the constitution was closely patterned after the Soviet constitution of 1936. The concept of federalism was similar to that in the U.S.S.R. The federal components enjoyed autonomy in local matters, but foreign affairs, defense, transportation, postal services, and trade were put under the control of a federal State Planning Commission. The federal authority was strengthened rather than curtailed. The national commissions were not to be considered the "political basis of state authority" but rather government agencies completely controlled from above. Financial matters were centralized, and supreme economic authority was vested in a federal agency, with the status of a ministry. The constitution provided that "private property can be limited or expropriated in favor of common interests," and that "under no conditions can large landed estates be privately owned." There were numerous provisions to guarantee freedom of press, speech, and assembly, the inviola-

bility of the home, and the right of habeas corpus. Immediately after the constitution was ratified the Constituent Assembly dissolved itself and reconvened as the National Assembly. Tito submitted the resignation of the cabinet, and was entrusted with the formation of a new Government. The Government sworn in on February 1 was as follows: President and Minister of National Defense, Josip Broz Tito; First Vice-President, Edvard Kardely; Second Vice-President, Yasha Prodanovich; Foreign Affairs, Stanoye Simich; Interior, General Alexander Rankovich; Public Works, Vlado Zechevich; Merchant Marine, Ante Vrkiyan; Foreign Trade, Nikola Petrovich; Information, Sava Kosanovich; Communications, Drago Marushich; Transport, Todor Vuyasinovich; Industry, Andriya Hebrang; Mining, Bane Andryev; Agriculture, Vaso Chubrilovich; Finance, Sreten Zhuyovich; Trade and Supplies, Zaim Sharats; Labor, Vitsko Krstulovich; Without Portfolio, Milovan Djilas, Dimitar Nestorov, and Kirilo Savich. Ethnically the Government included eleven Serbs, four Croats, two Slovenes, two Macedonians, and one Bosnian Moslem. The representation of the component national republics was as follows: Serbia, seven; Croatia, five, Bosnia-Herzegovina, three; Slovenia, two; Macedonia, two; Montenegro, one. The representation of political parties was Communist, eleven; Croat Republican Peasant Party, two; pro-Liberation Front Democratic and Agricultural Parties, one each; pro-Liberation Front Independent Democrats, two; Republican Party, one; identified with no party, three. Also included in the Government, but without ministerial portfolios were the presidents of the Federal Planning Commission, of the Federal Control Commission, of the Committee for Higher Education, of the Commission for Public Health, and of the Commission for Public Welfare. Very soon the communist inner circle emerged as the real rulers of the country: Tito, Kardely, Hebrang, Rankovich, Zhuyovich, Mosha Piyade, and Milovan Djilas.

The Government manifested its determination to make Yugoslavia politically monolithic. Milan Grol, who had resigned from the Government in protest at Tito's authoritarian methods, was virtually kept prisoner in his home. His *Demokratiya*, the only surviving opposition newspaper, was closed, and a number of its contributors and other Democrats were interned. Separation of Church and state deprived the Church of its percentage of communal taxes, the clergy of Government salaries, the twenty-four theological seminaries of Government support. Agricultural reforms took 27,000 acres of Church land, and the Church was reduced to dependence upon voluntary offerings. Civil marriage was authorized. Bishop Joseph, acting head of the Church, acquiesced in the separation but declared he would fight for "freedom of religion," specifically, against interference in ritual, education, or property. The dominant position of labor was reinforced by Tito's declaration that the "trade unions are the guardians of the state." Government measures for a planned economy and a stabilized dinar were only partially successful, early in the year production was reported to lag, and low Government-fixed prices directed products from the open to the black market.

The temper of the Government was made plain, and foreign criticism aroused, by two significant trials and convictions. On March 13 the Chetnik General, Draja Mihailovich, was captured. On June 6 he was placed on trial on the charge of collaborating with the enemy; he was found guilty on July 16, and executed the following day. Informed

neutral opinion was convinced of Mihailovich's guilt, but the trial itself appeared not to have been fairly conducted, and it was thought that Mihailovich's earlier services to the Allied cause might have been considered an extenuating circumstance to mitigate the penalty. In the United States the "Committee for a Fair Trial for Draja Mihailovich," which included a number of prominent Americans, aroused suspicion of the Yugoslav Government's good faith and petitioned the Secretary of State to demand that Mihailovich be turned over to an international tribunal for trial. Since Mihailovich was a Yugoslav subject charged with treason against his own Government such a step seemed infeasible. The State Department did request, but in vain, that American officers who had been saved by Mihailovich be permitted to testify on his behalf. The second trial was that of Archbishop Aloysius Stepinac, Roman Catholic primate of Yugoslavia, who was indicted on a similar charge on September 23 and sentenced to life imprisonment on October 11. Again informed neutral opinion was convinced that the Archbishop was guilty as charged; even the Great Serb group in America, which had been violently opposed to Tito and his regime and had defended Mihailovich, accused the Archbishop of responsibility for brutalities committed in connection with Roman Catholic efforts to convert Orthodox Yugoslavs. But the proceedings evoked unfavorable criticism abroad, the Catholic Church in particular, and particularly in America, vigorously espousing the position that the trial was a flagrant miscarriage of justice and a step in communism's avowed and relentless campaign against religion.

American indignation was virtually universal and official representations took a very serious tone as result of a number of incidents involving American aircraft. Early in August the occupants of a grounded American C-47, which had been en route from Austria to Italy, were arrested by the Yugoslav authorities, who charged that their territory had been violated. On August 18 an American plane was fired upon, and on August 19 another was shot down and its occupants killed. In response to the strong American protest of August 22, which demanded satisfaction on pain of severance of relations, the Yugoslav Government agreed, on September 10, to pay indemnities and avoid repetition of similar incidents. On November 12 Yugoslavia demanded indemnities of more than \$6,750,000 as compensation for losses incurred as a result of detention of Yugoslav shipping on the Danube by American authorities. On the first anniversary of UNRRA operations in Yugoslavia in March Tito expressed formal thanks to that organization. Distribution of UNRRA supplies was reported to be honest, none going to the black market, but UNRRA assistance undoubtedly aided the Government program. Yugoslav relations with Great Britain were also strained. The Yugoslav press supported Andrei Vishinsky's attack on British policy in Indonesia and Greece in the Security Council meetings in London in January. Through the Russian delegation to the Security Council Yugoslavia protested against the projected advance of General Anders' Polish troops towards Yugoslav territory. Yugoslav officials announced their intention to expropriate the British owned Trepcia lead and zinc mines, along with the Bor copper mines, which the French owners had sold to the Germans. But relations between the two Governments continued correct. A Yugoslav trade delegation was received in England, and British representatives abroad were instructed to discontinue relations with political or military adherents of King Peter.

More vexatious and more pregnant with danger for the future peace of Europe was the question of Venezia Giulia and Trieste. The Council of Foreign Ministers meeting in London in September 1945 appointed a joint committee to investigate the localities under dispute and explore the question of a permanent boundary. It was stipulated that the boundary eventually to be recommended was to be "in the main . . . the ethnic lines, leaving a minimum under alien rule," though important economic and geographic considerations must be noticed; and the committee was to "report on an international regime which will assure that port and transit facilities of Trieste will be available for use on equal terms by all international trade and by Yugoslavia, Italy, and the states of Central Europe as is customary in other free ports of the world." On March 27 the Yugoslav Ministry of Foreign Affairs handed notes to the British and American representatives in Belgrade complaining that the Allied Military Government in the disputed areas had reintroduced the legal system and other abuses of the Fascist regime. The note demanded that (a) the civil police be dissolved; (b) Italian fascists be expelled from Zone A, Yugoslav collaborators sheltered there be interned, and Yugoslav war criminals be delivered for trial; (c) free elections be carried out; and (d) Slovene schools be reopened. On the arrival of the allied commission of inquiry Yugoslav propaganda was heightened. The Allied Military Government was called a "stronghold of fascism," and Zone A was declared to be still in need of liberation. If internationalized, the Yugoslavs said, the area would become a "center of war criminals, spies, international adventurers, provocateurs, and robbers"—in other words, a focus for refugees who might seek to overthrow the Tito regime. It was charged that such refugees were in fact active on Austrian territory. Tension subsided when the commission left for London on April 5, but June saw a new wave of pro-Yugoslav propaganda in Trieste. The local communists had apparently decided to abandon their policy of "co-operation" with the Allied Military Government and to create incidents which would demonstrate the inability of that Government to maintain order. At the Council of Foreign Ministers meeting in New York during November discussions concerning the statute of Trieste, which involved disputes regarding the powers of the governor, the allegiance of the police director, the date of withdrawal of Allied troops, and kindred matters, were brought to a conclusion on November 27. Allied troops would be reduced at once and withdrawal three months after the governor took office if conditions permitted, and elections to a council would be held a month later. Boundaries with Italy, as with Austria, awaited the conclusion of peace treaties.

At the end of the year relations with Greece had gravely deteriorated. Soon after the (royalist) Popular Party Government came into power as result of the elections of March 31, its Governor of Western Macedonia charged that Yugoslavia was waging undeclared war against Greece by aiding subversive elements in Greece. As a result of the consequent tension Yugoslavia recalled its ambassador from Athens. In June a Greek Spitfire plane was forced down in Yugoslav territory. Yugoslavia naturally gave Albania full sympathy in denouncing insistent Greek claims to Southern Albania. Greek charges of Yugoslav hostility grew more serious at the end of November. Greek Government forces found themselves unable to control "communist" bands in northern Greece, and openly charged that these bands were being provisioned

and directed from Yugoslavia. The Yugoslavs protested that Greek planes repeatedly violated their territory, and when, on November 25, the Greek Government rejected the Yugoslav protest, *Borba*, the Communist Party organ in Belgrade, foretold that Yugoslavia would sever diplomatic relations. The Greek Minister of War, Philip Dragoumis, was quoted as confidently expecting not only British but also American military aid. Yugoslavia's Greek, like its other, foreign relations, appeared to be an aspect of the rivalry between Anglo-American and Russian interests, likely to improve or deteriorate as relations between the great powers improved or deteriorated.

**Religion and Education.** According to the 1931 census, members of the Serbian Orthodox Church comprised 48.7 percent of the total population, Roman Catholics 37.45, Moslems 11.2, Protestants 1.66, Jews 0.49, and Greek Catholics 0.32 percent. Education (1938-39): 1,474,224 students in elementary schools, 177,034 students in secondary schools, and 16,969 students in the universities.

**Production.** Agriculture, in normal times, was the occupation of 80 percent of the people, and about 80 percent of the cultivated area was devoted to cereals. Minerals produced include coal, iron, copper, gold, lead, chrome, antimony, and cement. There were 3,054 industrial enterprises in 1938 and their employees numbered about 400,000 in 1940. Leading industries included timber, textiles, milling, tanning, cement, leather goods, chemicals, steel, brewing, and sugar refining.

**Foreign Trade.** The value of merchandise imports in 1940 was 6,019,000,000 dinars; exports, 6,680,400,000 dinars.

**Finance.** Budget expenditure authorized for the 1940-41 fiscal year (ended March 31) was 14,708,200,000 dinars, as against actual expenditures of 12,327,900,000 dinars in 1939-40. Public debt on Mar. 31, 1939, 24,620,000,000 dinars (internal, 12,620,000,000, external, 12,000,000,000). On Mar. 31, 1941, currency in circulation totaled 15,281 million dinars. The average exchange rate of the dinar was \$0.0227 in 1939, \$0.0225 in 1940.

**Transportation.** There were 6,591 miles of railway in 1939 (6,000 miles operated by the state). Highways extended 26,534 miles. The Danube and other rivers are important traffic arteries.

MOSES HADAS.

**ZANZIBAR.** A British protectorate in East Africa, comprising the islands of Zanzibar (640 square miles) and Pemba (380 square miles). Total area, 1,020 square miles. The islands lie south of the equator, with Zanzibar about 23 miles from the African coast at the nearest point. Population (1931 census): Zanzibar, 150,000. Pemba, 100,000. Capital, Zanzibar (50,000). The protectorate is administered by a British resident, who presides over the legislative council of 15 members. Sultan Seyyid Sir Khalifa bin Harub presides over the executive council.

**Production and Trade.** Cloves, the most important industry of the islands, occupies about 48,000 acres. Coconut production is second in importance. The chief exports in 1944 were cloves (£444,364) and copra (£249,352). Cotton goods, rice, and grain were the chief articles of import.

**ZINC.** Disturbed labor and market conditions restricted the mining and smelting of zinc during 1946 with some consequent disruption of zinc-consuming industries. These artificial factors, rather than absolute shortages, caused interruptions in the flow of metal to industry during the year.

Almost coincident with the summer labor difficulties, expiration on June 30 of the government's Premium Price Plan, by which mines are paid a bonus for otherwise unprofitable production, caused many mines to cease production until the plan's re-instatement on July 26. During the same period, Office of Price Administration price ceilings were suspended, and the price of Prime Western zinc advanced from the former ceiling of 8.25 cents per pound, East St. Louis, to 9.5 cents per pound. When the former 8.25 cents ceiling was reimposed July 26, trading came to a virtual standstill in the expectation that it would be raised. Converters were unwilling to market at ceiling prices secondary metal produced from high cost scrap purchased during the OPA interim. On October 14, OPA raised the price one cent. Following decontrol of zinc prices November 11 producers immediately raised prices to the world market level. Prime Western zinc was sold at 10.50 cents per pound, East St. Louis.

As with copper and lead, the United States government purchased from foreign sources sufficient zinc to piece out domestic supplies. Because of heavy competition from other countries for available world supplies it was necessary for the government to pay as much as two cents per pound above the domestic ceiling on foreign purchases, with resale made to consumers at the ceiling price. During the latter part of the year the Office of Metals Reserve discontinued the purchase of foreign slab zinc, and authorized the export at world prices of zinc smelted domestically from foreign ores. Total imports consisted of approximately 275,000 tons of zinc in ore shipped to United States smelters, largely from Mexico, Canada, Bolivia and Argentina; and about 103,000 tons of slab zinc, about three-quarters of it from Canada.

Despite interruptions discussed above, domestic mines produced ore containing approximately 565,787 tons of zinc (1945: revised: 614,344 tons). Idaho maintained its position as the largest producing state, and despite a period of sharply reduced activity during the summer price uncertainty the Tri-State district (Missouri-Kansas-Oklahoma) was the largest producing district.

Total domestic production of primary slab zinc was about 759,212 tons, from both foreign and domestic ores, during the year.

CHARLES T. POST.

**ZIONISM.** Such are the birth-pains of the Jewish national restoration in the ancient land of Israel that fifty years after Dr. Theodore Herzl convened the first international Zionist Congress in Basle, Switzerland, in 1897, and twenty-nine years after the British Government issued the celebrated Balfour Declaration pledging "to facilitate the establishment of the Jewish national home in Palestine" the Jews in Palestine are still struggling for that freedom and independence which they sought through years of wanderings and travail. World War II, like World War I, seriously interrupted the work of

the Zionists as it impeded all constructive tasks of the Jewish community, but at the end of the more recent world conflict there was urgent need for a center, not alone for the Jewish soul, but for a home and a haven of refuge for those whose communities were demolished by the war and whose homes were left in the ruins of the devastated areas. As a matter of belated justice to a long suffering people the spirit and intent of the Balfour Declaration of 1917 had the official endorsement of fifty-two nations of the world.

Contrary to its repeated previous declarations, however, the British Labor Party on its assumption of power in England veered from its early pro-Zionist position to an attitude which like that of the other political parties was more sensitive to the antagonism of the Arabs in Palestine than to the solemn obligation of their government to fulfill early pledges. To President Truman's request for 100,000 immigration certificates for homeless Jews the British Government answered with a proposal for the setting up of a joint Anglo-American Committee of Inquiry to examine the Palestine problem. The President acceded to the proposal but reiterated his adherence to his wish for the admission of the refugees in behalf of whom he had pleaded. Though the positive recommendations of this Committee favored the early admission of homeless Jews, the negative recommendations relating to the future of Palestine led to the appointment of another committee and to further protracted correspondence and negotiations, all of which delayed the entrance of the most needy homeless persons into Palestine. Meanwhile, the resistance movement of the Yishuv or Jewish settlement assumed sharp aspects and protest against the British administration, with extremists resorting to violence which the moderate and recognized organizations could no longer control. The Haganah or unofficial military guard which, during the war, assisted in the British war effort and had the sanction of the British military authorities, continued to assist in the entrance of immigrants. These immigrants, without proper certificates, and at the risk of their lives, sailed in all manner of unseaworthy vessels, and the leaders of the resistance movement and all Palestine Jews in general, in view of early political pledges, ignored the cry, "illegal," in the matter of such immigration of Jews into their own homeland.

Out of the second Anglo-American study group, called the "Cabinet Committee," came a plan for the setting up of three provinces in Palestine, one for the Jews, the second for the Arabs, and the third as a British possession to be predominant in the whole area. The supreme Jewish body, the Jewish Agency for Palestine, countered this plan with an alternate proposal of a "viable Jewish State in an adequate territory" in Judea, this being offered as a basis of discussion before the Jewish-Arab Conference in London planned earlier by the British government, the sessions of which were postponed until the beginning of 1947.
